That's no excuse for banning it. Fortunately, it seems like a
government ban is not the reason this time. A little google searching
turns up complaints from people unable to use google video for the
same reason in many countries, among them Germany and other European
countries.

Does that 'universal adapter' have interchangeable tips - if so
perhaps you have the polarity backward.

Are you referring to the polarity setting on the adaptor? There are 2
settings:
+ o -
- o +
I chose "+ o - " as it matches the polarity engraved near the dc input
jack on my radio receiver.

Hello all,
AMC is currently running this movie from 1954.
It is a bit inane at times but is very accurate re the radio gear in use then.
Anyway,at 1hr 4min into the film they overfly the freighter where the jr. radio op is listeneng on his homebrew rig...note the QSL's on the wall....esp. the one at the left: W1AW.
Also,the S-38 looks to be in new-mint shape...
They will rerun it Monday.
Regards...

Nice catch!

You may wish to know, R. Chiquimula was eager and happy to QSL my reception report in late 2004; if you have some decent details, shoot him a report. I sent him a couple of bucks, which he said were not necessary, but he kept them as charitable donations and sent me a receipt for tax purposes :-) which I did not use, because I was unsure that he was a registered non-profit in the US.

His full address is in Passport.

1797. New Blog on TP MW and Tropical Band DXing with the Flex-Radio SDR-1000

Newsgroup: rec.radio.shortwave
Date: 2006-01-16 05:42:03 UTC
From: Guy Atkins <dxNOSPAM@guyatkins.com>
Message-ID: <S-mdnTss8pKMr1beRVn-hg@comcast.com>
Source record: 58347

Rec.Radio.Shortwave readers may be interested in following the weblog on my experiences, pro & con, with the Flex-Radio SDR-1000 receiver. I intend to add to this blog as time allows (hopefully weekly) and as I discover how this software-defined (SDR) radio performs for TP DXing and the tropical bands.

I have a good beginning so far, with sections on:

a.. Introduction
b.. Key Points
c.. Unique Features
d.. Drawbacks and Solutions
e.. Initial Setup and Calibration
f.. Power Up: First Impressions of the SDR-1000
g.. DXpedition Time
The URL for the blog is: www.sdr-1000.blogspot.com

I welcome your online comments and questions.

73,

Guy Atkins

Puyallup, WA

Unfortunatly all we have is a choice of conspiracy theories, those responsible are either dead or keeping quiet. You may recall Colin Powell saying the administration would release a "white paper" detailing the evidence against Bin Laden. He was appearently over-ruled on that one. (Considering how his presentation at the UN came back to bite him on the ass, that was probably a wise decision.) He later described the evidence as " less than circumstantial." Hmmm. Arguably the most important event of out lifetime, the justification for 2 wars (and counting,) the excuse for tossing out large portions of the constitution, for slashing pretty much all non-defense domestic programs, etc, and it's based on evidence that our Secretary of State says is "less than circumstantial."

>Start at the base URL. Note big story on astral projection,
(The interesting thing here is the Dept. of Defense's interest in astral projection.)
occasional

I thought you might get a kick out of this but you seem to have missed the fact that the guy's a Canadian! For some reason that seems to be a big deal around here.

>Now, off to the given URL. Did you notice that Mohammed Atta lived his
>last days in the same country where Gene Autry lived his last days? Do
>the coincidences between the Lincoln assassination and the Kennedy
>assassination demonstrate that the same parties orchestrated both?
>And why do they call it a sandwich when it is neither sand nor witch?
>
I'm a little dissappointed in you Clifto, when presented with a long

list of things about the official story that don't quite pass the smell test, most with links to mainstream news stories, the best you can do is to make up something to ridicule.

>Whew. Thank goodness the wife heard me ranting and whacked me over the >head with a bat. I was just about to make a thermonuclear warhead from >peanut butter, PopTarts, diatomaceous earth and used snow tires.

Yes, thank goodness for your wifes practiced aim. But if you have some time, peruse this one. No confusing Canadian sense of irony to deal with.
http://www.cooperativeresearch.org/project.jsp?project=911_project

It's long but you can skip around and see how well the (mainstream) news stories match the official conspiracy theory.
When the facts don't match the theory you have the choice to revise your theory or ignore the facts. Your choice.

1814. Is Icom R75 better than JRC NRD-525?

Newsgroup: rec.radio.shortwave
Date: 2006-01-16 13:35:36 UTC
From: Lee <tljb@attbi.com>
Message-ID: <ns7ns15aebjnattau1sgiglrtc2tvkt8vp@4ax.com>
Source record: 58364

I've been away from this stuff for many years and recently bought a NRD-525 on EBay. I'm a little disappointed in the results I'm getting. A lot of noise and not a lot of stations, although some such as Tiawan are very clear. At this point my antenna is a 40 ro 50 foot wire strung out to a tree in my yard. I've been told that the ICOM R75 is better due to newer design. There is no way for me to try one or even look at one other than to buy it. Is the R75 are better reciever? I mostly just want to hear commercial stations from other countries.

Thanks for your time.

GlobeTrotter,

First Question - Is your External AC-to-DC Power Adapter designed
for your standard AC Power Outlet {Input} in Singapore :
[ ] 220/240 VAC ? -or- [ ] 110/120 VAC ?
Problem - Trying to use a 110/120 VAC Adapter with a
220/240 VAC Source ?

Second Question - Right Adapter Plug SIze :
Make sure that you are using the Biggest Size "OD" Adapter
that 'fits' your Sangean ATS-606 Radio's 4.5 VDC Input Jack.
- Why - Sometimes the Radio's External DC Input Jack has
a built-in Mechancal Switch that 'disconnects' the Batteries
from the Radio when External DC Power is being used.

Third Question - Batteries Getting Hotter :
"IF" as you write - "The battery compartment gets hotter"

Then first of all - Unplug the External AC-to-DC Power Adapter
from the AC Power Input and the Radio.

Next - Remove the Batterys from the Radio

Then - Plug the External AC-to-DC Power Adapter into the
AC Power Input and the Radio.

Now - Turn-On the Radio and try listening to it again.

? - Does the Radio Work Now ?

hope this helps - iane ~ RHF

The 525s are some of the best radios ever made. Theres something either
wrong with the radio or your setup or environment such as ant. or RFI
etc... A R-75 isn't a better radio for tough signal handling. With mods the
R-75 is a nice radio. These other guys will go into great detail about the
R-75 mods if you ask.

Lee,

The JRC NRD-525 is a good Shortwave Listener's (SWL) Receiver.
Before you spend some more money on a second Radio/Receiver
like the Icom IC-R75 { I own one} - What About a Better Shortwave
Listener's Antenna to improve your Shortwave Listening (SWL) ? ?

Consider Buying or Building a better Shortwave Listener's (SWL)
Antenna.

I have both and can say the 525 IS the better of the 2. There MUST be
something wrong with yours or you have a problem with your antenna/lead-in
or something else. If you just want to listen to commercial broadcasters,
you should have gone with a Sat-800. It is suited to that role very well...

I don't think the NRD-525 vs R75 is going to make a lot of difference.
I've used them both (although I own neither) and I think they're fine
radios, and they're also both much better than the average SWL uses.

If you're hearing "a lot of noise and not a lot of stations", I
especially don't think the radio will make a big difference.
Concentrate
on listening in the right places at the right times: 49M is packed
on the evenings in the US, and 31M will be nearly as crowded too.
25M and 19M have some activity in the day. But nothing is as jam-packed
as 49M at night, sometimes it seems like there's a station every 5kHz.

You will also hear lots of South/Central American stuff on 61M through
the night. Sometimes when the other bands aren't so hot because of
poor propogation, 61M just booms in by comparison. On these nights
MW (AM band, 540kc-1600kc) reception is exceptional too.

Tim.

I'm always leery of the idea that a company like Google has to
negotiate rights to distribute content.
First, that implies the country has tight control over how the
internet is viewed within that country, and then that it *wants* to
tightly control what content is viewed within that country.
Another example of the oft-misunderstood concept of freedom that many
of us have.

We sometimers forget that many countries that are held up as paragons
of freedom, aren't.
France and Germany, as only two examples, forbid anything that
glorifies or apologizes for Nazism. Regardless of how one feels about
Nazism, this is not free speech in action.
The Internet is often limited in such countries (it certainly is in
France and Germany) for various reasons.

>Thanks for your time.

The answer is simply "no."

Over the years, Japan Radio Company receivers have been among the best
available to SWL folks. The JRC rigs are popular with ships at sea,
and generally widely-used for commercial purposes.

I have an NRD 525, as well as an Icom 735, one of Icom's better
transceivers from the 80s & 90s, and considered to have a hot
receiver. Listening to the same stations, on side by side rigs, I
can't really hear much difference between the 525 and 735.

Another way to look at it: the list price on an R75 is $692 in 2006; I
paid around $1200 for my 525 back in 1988.

You might re-check and make sure you're operating the controls
correctly in regard to filter width at Wide or Aux; AGC at slow; RF
gain plenty high or all the way clockwise; make sure the Notch is off
and PassBand Spread is centered; the Noise Filter is off; the
ATTenuation is off; the mode at AM for most broadcast stations.

Slow down you move too fast
You got to make the moment last
Just kickin' down the cobble stones
Lookin' for fun and feelin' groovy

Hello lamp post
What-cha knowin'
I've come to watch your flowers growin'
Ain't-cha got no rhymes for me?
Doot-in Doo-doo
Feelin' Groovy

Got no deeds to do
No promises to keep
I'm dappled and drowsy and ready to sleep
Let the morning time drop all it's petals on me
Life I love you
All is groovy

yes, Yes. YES ! - - - Life I Love You - All Is Groovy :o)

thinking to myself - hello self ! - how you doing ? ~ RHF
- - - Ba da, Ba da, Ba da, Ba da...Feelin' Groovy ! ! !

Video.google.com isn't a country-specific site. If it's not available
in some countries, it's because it's being blocked.
Who but the country's government would be having it blocked?
It's true that being in a Beta state is no reason for the blockage, so
the only other likely reason is content.
That Germany is among the countries blocking it, only points more
strongly to content as being the reason.

I have to say I'm impressed RHF, that you'd llink to one of the
handfull of real investagative journalists left. Palast almost
singlehandedly exposed how the Fla. repubs had wrongfully purged what
eventually turned out to be more than 90,000 voters, 54% of them
black, from the rolls before the 2000 election.
http://www.gregpalast.com/detail.cfm?artid=33&row=2
Let's see, roughly 50% voter participation, that's 45,000 votes
lost. Say 10% were black voters, that's 4,500 votes, (whites voted
roughly 50-50 so let's toss them.) Blacks voted 90% Democratic, so
that's more than 4,000 votes stolen from Gore. What was Bush's
supposed lead in Fla., 500 or so?

Damn, now I'm going to have to start reading your (OT) posts.

Source record: 58388

Dear Lee,

Please understand that we are now at the "bottom" of the 11-year sunspot cycle. Conditions on the shortwave bands are not as good as they were in, say, 2001 or will be probably in 2010-11. You will have difficulty receiving signals on the higher bands (above 10000 kHz) at night and the signals in the lower frequencies don't generally "travel" as far as those on the higher frequencies. At the present time, the best time to listen is early morning and daytime as those higher fequencies travel better in your local daytime. (Right now - 1637 UTC - I'm listening to some beautiful classical music on Radio Jordan 11690 kHz; the transmitter is in Jordan - it is not a relay in the US, Canada, or Caribbean islands such as the Taiwan broadcasts you are hearing.)

I do not believe that any other radio would perform "better" for you than your NRD-525 (assuming it is in first-class shape); there are certainly other radios which are "better" performers but, if you can't hear much with your current radio (another assumption: your antenna is mounted and connected correctly and your radio is grounded correctly), you won't hear any more with any other one. As others have stated here, the JRC NRD-525 is a good one.

So hang in there - conditions will start to improve probably in 2007. In the meantime, try listening during the day. I think you'll be surprised and pleased.

Best of luck,

Joe

1840. Electrical Noise From House & Receive Only Antenna ?

Newsgroup: rec.radio.shortwave
Date: 2006-01-16 17:09:31 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <XuWdnX4oYbTUTlbeRVn-sw@comcast.com>
Source record: 58390

Hello:

For a receiving only application:

Any opinions as to how far away from a house (with the normal compliment of PC's, broadband, etc. noise producers)
the vertical leg of an inverted-L antenna should be so as not to pick up any meaningful amounts of household electrical noise ?

I imagine that these fields diminish very, very quickly with distance ?

The reason I'm asking is that the easiest thing for me, by far, would be to run the vertical leg up the outside of the house, perhaps on 6 inch standoffs. The high horiz. leg would lead away from the house.

I realize that the further the better, but would 6" be "enough" ?

Any thoughts on ?

Bob

Mike, that's the science of marketing. Creating desire. The economy
is based on it.

Essentially, it's manipulation of the emotions, disguised as logic or
common sense, to stimulate commerce.

You know: Bullshitting for profit.

If no one did it, we'd still be living in the 19th Century.

Not to say there aren't abuses. But the entire advertising industry
driving Western Culture is the business of modifying the facts to fit
the desired outcome. Nearly 100% of the laws regarding sales,
advertising and consumer protection are direct responses to abusive
marketing and deceptive advertising.

Martyn is only participating in a time honored tradition pioneered by
medicine show barkers, institutionalized by Barnum, canonized by Madison
Avenue, the mother church of which is Hollywood.

He's a huckster.

And there are no limit to the number who will fall for his nonsense.

"My dear old Uncle Litvack said,-- just before they sprung the trap
--, 'You can't cheat an honest man. Never give a sucker and even break,
or smarten up a chump.'"

--W.C. Fields as Larsen E. Whipsnade

I was thinking of negotiating with the content owners, not with
governments. Most big studios have very tight requirements for
distribution of their content.

Because they don't have permission from the content owners to
distribute videos in those countries. Google is certainly serving
different pages to different countries.

Forget about the inverted L- run the antenna as horizontal- lower noise
because it is horizontal and you'll avoid the deafening p/u from all the
appliances in the house as their major noise component is vertically
polarized.
Remember, you are dealing with MW and HF wavelengths- tyically 200 meters
long to as short as 10M: 6" is no distance at all.

I understnd that for VHF, most noise is vertically polarized. However,
I wonder if that is true for HF since so many noise sources are run
horizontally. Power lines, computer network cabling, etc.

Of course my solution is to go for a Wellbrook, i.e. magnetic loop
since most noise is electrical.

Nor does Korea "tightly control" what we can see on the internet. There are country specific laws against things like porn, and these sites are blocked insofar as the MIC can determine the IP's of such sites. If they find that enough objectionable sites are located within an octet, they block the entire octet. As far as them blocking LiveJournal and ogrish.com, they did this only for a time, until interest in the particular video had waned. The sites are now available for viewing. To me this is unwarranted censorship, but who am I to comment on the cultural sensitivities of another culture?

I'm glad to see this frequency listed again. Last year I posted the same exact thing. A few times last summer, I picked up programming in Spanish on that frequency. If I remember correctly, the time was around 8 to 10 UTC. It had a lot of fade. At times, it was clear but it would fade in and out. I'm sure it wasn't an image. I used my R75 in ssb mode and the zero beat was on 7115.02 No one on this ng had any idea of what it was. Most suggested that it was an image or some sort of intermod. Each time I heard it, I tried to listen for any station ID. I had no luck. I'm sure that there was something being transmitted on 7115 but I was never able to figure it out. I haven't heard anything there again. Next time I do, I'll record it.

ok doke.

I'm in Central NH - Lakes Region (boonies)
It's below zero right now so I'm not going outside :)
I have tried two rooms (adjacent) upstairs in the house. I've plugged
in the accompanying antenna (about 20' of wire).
Will scan again tonight with antenna.
Fishing for Lake Trout, Rainbows and Cusk (Burbot) on Lake Winipesaukee
(where I live)
Have it in DX position.
Will try the stations on Primetimeshortwave www.
Again - it's bitter cold out right now so I'll be trying from indoors
still.
Will give another go tonight...
Thanks for the help.

Only one radio up for auction this week.....please keep Martyn in your prayers:

I have been in hospital last week so this is the only item I will be listing until I feel better, I have 100's of radios to list and go through so hopefully by next week I will be in a selling mood.

Ramsey Electronics,Inc www.ramseykits.com advertises a Signal Magnet Antenna.The ad on page 92 in my snail mail Ramsey Kits catalog that showed up here last week says,Remove The Noise Automatically! SM 100 Signal Magnet Noise Reduction Antenna Kt With Case $89.95
SM 100WT Factory Assembled & Tested for AM Band $134.95.
Outstanding results from 500 KHz to 15 MHz.High-Q Ferrite Rod antenna with Faraday shield eliminates noise from power lines,light dimmers,most static crashes,and more! This antenna responds only to the magnetic field of the desired station and ignores the electrostatic field where most interference is found.It does a remarkable job pulling in stations lost down in the noise of powerline crud,flourescent lamp buzz and light dimmer hash.Plus it's very directional,able to null strong stations on the same or nearby frequencies! We developed this antenna to pull in WGR,a 250 watt nighttime station 75 miles away,so we could listen to Buffalo Bills talk show during the night.You can imagine all the powerline and equipment we have here at the factory.So,we came up with this ferrite rod,varactor tuned active antenna that's Faraday shielded - it only responds to the magnetic field - and boy does it do the job!

Designed to cover the AM Broadcast band,but includes details on building for any frequency range up to 15 MHz: it works gang-busters on Shortwave.Works indoors or out,contained in rugged PVC pipe with a single RG-59 coax cable connector.Operates with up to 500 feet of coax cable.(you supply) between antenna assembly and control box (size: 5" x 5 1/4" x 1 1/2"). Includes all parts,matching case set and precut PVC materials.Operates on external 120 VAC power adapter that is included.Antenna is 9 1/2" x 9" long ,L-Shaped 1" pvc pipe with end caps.(It worked just great to listen to the Bills players explain for 4 straight years why they lost the Super Bowl!)

I definately think the radio is defective. It's impossible that under the conditons you mentioned that you wouldn't be able to pick up anything on SW unless there was something wrong with the radio. Hate to give you the bad news, but it's time to return it for a replacement.

Lisa Simpson wrote:
> I just bought a Kaito model KA1101, and am considering getting an Icom R75;
> would you good folks kindly shower me with your reviews and/or opinions of
> both please?

I do not know anything about the Kaito model KA1101 except what others have to say.

I have an Icom R-75 and it is my primary SWL radio. I also have a TenTec Rx-320D, a Sangean ATS-803A, and a Sony ICF-SW07. The Ten-Tec is very good, but you must have a PC to use it. I have an Icom T90A, but that is a different thing altogether.

My favorite antenna is an Eavesdropper from Antenna Supermarket. It is setup as an inverted "V" pointed east/west on my roof with its top at 40 feet in the air and its ends at about 24 feet up off the ground. My second antenna is an Alpha-Delta DX-SWL set up as a Sloper pointed north/south. It is a very nice hunk of wire. Lastly is a 180foot long wire strung north/south from my 3rd floor attic to a tree about 160 feet away with about 20 feed hanging down as an inverted "L". For reception only the wire does not need a tuner. All three work well and switching between them usually does not help improve reception. It does improve directionality and that's why they are all set up.

I have an MFJ-1024 which I would not recommend to anyone for anything as it is no better than a 20 foot length of wire and much noisier. I have a bunch of active loops, such as the Sony AN-LP1, but they are not as good as the long wire or the "V" or the Sloper. They are very good for travel, and that is when I use them.

I live on the central coast in California up in the hills and am situated right against a mountain with a clear view west and south. Everything else is blocked by 200 feet to 800 feet of mountain. In general, reception is quite poor for everything other than South America or the Far East. Austrialia, Japan, and China come in well, as do the hams up and down the coast. Europe is a very hard find.

The R-75 needs a bit of a learning curve to get used to in terms of tuning and filter setup. But once you have all that under control it is very nice. Heck, it is very nice right out of the box with no accessories and may be all you need. There are some websites discussing the set up and use of this radio. If you want to hook it up to a computer there are a number of free programs which will allow you to tune and log and have a ton of fun!

I say go for the R-75. Get ALL the filters, and you will be impressed. Get them now when you get the radio and before it is too late. Even if you think you will not use them now, you may find later that you want them. You may want to learn code and listen in, who knows? The radio may be around as used for a long time. But if they discontinue it, you may have a hard time finding the accessories such as filters. You may not want them now, but if you find you want them later and they are not available you will be out of luck. I do not have the Kiwa Electronics mods, but I am told they are worth getting. I have no opinion on that.

I use the radio for SWL, PSK-31, RTTY, most digital modes, and for listening in on hams and utility stations. It is hooked right into the PC so I can record and log as much as I like. One thing though, It took me a long time to convince myself that the R-75 was any better than the ATS-803. Both are great for SWL, but the usefulness of the Icom for things other than SW becomes apparent with experience. You will need a good antenna to get the best out of this radio.

> Thanks for your time.

I have 8 or so receivers here working off the same antenna (active multicoupler) and the reception on all of them is pretty much limited by my antenna. If you can't get a station with your NRD-525 (an excellent receiver BTW though I don't like the audio), you wont receive it on any other receiver either. The atmospheric conditions lately are pretty bad. Where are you located and what times and frequencies are you listening to?

1905. Re: Electrical Noise From House & Receive Only Antenna ?

Newsgroup: rec.radio.shortwave
Date: 2006-01-17 05:28:09 UTC
From: HFguy <HFguy@connifer.net>
Message-ID: <Jf%yf.2496$SD3.1661@trndny07>
Source record: 58555

The following website describes the best way to install a random wire or inverted-L antenna to minimize the noise from domestic sources. The vertical downlead wire should be located a considerable distance from the house (at least 20-ft). This is where the ground connection is made at the bottom of the downlead and the matching transformer. Coax is run on/in the ground from the transformer, back to the receiver in the house.

http://www.anarc.org/naswa/badx/antennas/low-noise_antenna.html

Won't happen on XM. RCI is a CBC production, and CBC is in bed with Sirius
Canada.

bOTH OF YOU ARE COMING ACROSS JUST like the white student in the Tim Wise post.

Tim is the "wisest no pun intended" white man I have ever met, or read about.

Why don't you take the time to read his post at "tolerance.org" and then tell me what you think about what a white man like you has to say?

Are you afraid to let a little sunlight into the dark damp recess of your mind?

Stop attacking me and deal with my message. Using the term white supremacy does not automatically make one a "Racist"

The more you talk, the more you reveal how little you actually know about the race question.

Peace

A white patriot should execute that coonass Nagin.

He's as bad as that plagiarist scamster, Michael King.

We got rid of Mike King in '67, let's make it a goal to get rid of
Nagin in '06.

Top of the day mates,

We aren't speaking about Africa DX. I live in Amerikkka. That's the place where I have studied people like you for decades.

Yes, Africa has some leaders that are immoral filthy, savage beasts as well.

However, there are many very intelligent Africans who can speak to that. I don't need to go over there and mess around in their countries. If we can just get the European colonialists out of Africa the country would probably recover and develop just fine.

As long as the Europeans and Amerikkans keep sucking the life blood out of Africa, it will never be able to stand on it's own.

We have enough grave issues here to keep us busy for along time.

Peace

As I remember, and please correct me if I'm wrong, the ballots that
the dems wanted to reject were not admissable according to Fla. law.
Some because they lacked a postmark having come from military bases.
When the repubs objected, these ballots were rightfully counted, along
with along with ballots that were unsigned and some that were
postmarked after election day.

USB... It's in the 20 meter hamband. As a general rule, anything above 10 megahertz in the HF bands is USB. Conversly anything below 10 megahertz is LSB. AM can be listened to in side band mode but the audio will not sound as full but it can cut down on some types of interference.

I'm not sure the "page" is being funded by it's own content. I think
it's more like Google funds it's operations with the income any one
video produces.

[snip]

For what it's worth, WSCR's CBS owned sister station, WBBM 780, still hasn't resumed IBOC broadcasting. The upper sideband interfered with O'Hare airport's 800 kHz Traffic Information Station (actually a parking information station). I don't know if the interference has anything to do with suspending the IBOC broadcasting from WBBM.

During the time both stations were testing, there were times in which both WBBM and WSCR were both running IBOC at the same time and times in which they were running IBOC alternately. I didn't think about it much at the time, but I now wonder if they were trying to get both IBOC channels broadcasting off the same antenna.

I think NO could use a new mayor. Nagin was quick to point the finger of blame everywhere except at himself. Those fields of yellow busses just sitting there did nothing for his credibility. The idiot could have evacuated the city by himself without federal intervention. With just a sprinkle of forward thinking he could have been a hero instead of the idiot crybaby we all know him as. When you got a whole city of 'your people' to worry about, you really need to think ahead. A fine steward of 'his people' he turned out to be. After his miserable failure the only thing a weasle like that could do was to try and deflect the blame by pointing it at the Bush admin. That damn governer of Lousiana was just as bad. Who in their right mind is going to depend on the federals to respond in an emergency. That's like depending on social security to take care of you in retirement.

Please stop with the N word and racial comments. Nobody wants to hear them Tim.

regards,
Bob

S... "how the Fla. repubs had wrongfully purged what
eventually turned out to be more than 90,000 voters"

Another Set of Liberal Lies and Left-Wing Distortions :
Made-Up Numbers = Outright Lies
Fabricated Numbers = Misrepresentations = Manufactured Lies
Obfuscated Numbers = Distortions = Hidden Lies

Republicans Did This . . .
Republicans Did That . . .
It's All The Republicans Fault . . .
Blame the Evil Mean Spirited Republicans . . .
The Republicans Are Just Plain Bad People ! ! !
The Republicans - They are Christians - bad, Bad. BAD !
The Republicans - They are Conservatives evil, Evil. EVIL !

First - Under existing Florida Law enacted by the both the
Florida House of Representatives and Florida State Senate
and Signed by the Governor of the State of Florida. This was
the combined efforts of Republicans and Democrats alike.
http://www.myfloridahouse.gov/Sections/Representatives/representatives.aspx

http://www.flsenate.gov/Legislators/index.cfm?Tab=legislators
http://www.myflorida.com/myflorida/government/contacts/contactGov.html
Actions Required by Law were taken to Maintain a
Current Role of Eligible Voters in the State of Florida.

INELIGIBLE VOTERS - Were removed for such things as :
* Current {Present} Residency - People Move Out of State;
to a Move to New City or County; or simply to a new Voting
District. (Property Ownership and Driver's License Records.)
* Felony Convictions which Bar - The Right To Vote under Law.
* Death of the Voter.
* Voters who-did-not-vote in the last two or more Elections
(Moved ? -or- Died ?)
* Request of the Voter or their Representative {Custodian}

Second - While this Action was 'initiated' by the Florida
Secretary of State : It was 'implemented' by the "Local"
County Board-of-Elections / Registrar-of-Voters.
Point-of-Fact that in many heavily Democrat Counties the
Elected Democrats were in-fact the very people who :
Dropped, Deleted and Removed these Voters from the
Roll of Role of Eligible Voters in their respective Counties.

NEWS - The Democrats Did It To Themselves Under the Law [.]

Third - What Happened in Florida - Happens in Every State
Every Election Year - And That Is A Point-of-Fact [.]
Note - Both Alameda County {Democrat} Toulumne County
{Republican} in the State of California do it regularly as
required by California Law passed by a Democrat State
Assembly and Democrat State Senate and Signed by a
then Democrat Governor Edmund "G" {Pat} Brown.
http://www.governor.ca.gov/govsite/govsgallery/h/biography/governor_32.html

Fourth - Dual {Two} State Voters in the State of Florida.
There are over 100,000 Registered Voters in the State
of Florida who are also Registered to Vote in the State
of New York. Are they Not Voting Illegally in One or the
Other States ? { If Not Both ? }

Note - Under the Principle of One Man/Woman One Vote !
[A US Citizen can Only Vote Once and In Only One State.]

Question - How many Voters from 'other' North-East States
are also Voting in Florida ?

Big Question - How Many Canadians, 'other' Foreign Nationals
and Resident Aliens {Non-Citizens} are Voting in the State of
Florida ?

FWIW - The Neighbors up around the bend-in-the-road here
in Twain Harte, CA have a Home and SUV here and a Condo
and a Car in Florida. They Own Property in Both-States; They
Own a Vehicle in Both-States; and They have Driver's Licenses
for Both-States. Are They Voting in Both-States ? ? ?

Five - The Democrat Controled City of Chicago had more
Voting Errors in the US Presidential Elections of 2000 and
2004 then the Entire State of Florida - Look-It-Up - It's-a-Fact [.]
Wow - Chicago Shades of 1960 - It's Deja Vu All Over Again ;-)
http://rinkworks.com/said/yogiberra.shtml

S... Thank You for the Opportunity to Present some Fair and
Balance Numbers and a Realistic Point-of-View with respect
to Voting in these here United States (Counties) of America.

One More Thing To Remember - Except for the National Office
of President of the United States - All Elected Office Holders are
in Fact State and Local - As in "All Politics Are Local" [.]

s... i am glad we had this conversation ~ RHF

That's easy to say in hindsight. What if he commandeered all the
buses (public and private) and spent millions getting everyone out of
town and then the storm veers east and misses the city? He would have
been tarred and feathered.

I liked Ray. He was my guy from the minute he announced for Mayor.
Yesterday, he lost my vote. Even if he didn't mean what he said, I
now consider him too stupid for the job.

Lisa,

On eham.net, you'll find that the first reviewer for the Grundig Mini 300 noted that his unit was "usually reading 5khz high across all of the bands."

see: http://www.eham.net/reviews/detail/4761

So, if the displayed frequency occasionally reads off by 5 kHz, it could well be that your 15545 @ 20:15 sportscast was actually the 15540 kHz RPI program and your 7115 @ 03:22 actually R. Republica on 7110 kHz.

If this is the case, then you'll find that your new Kaito '1101, being a PLL synthesized unit, will receive these transmissions 5 kHz lower than what your Mini 300 was displaying.

Best of listening to you.

junius

Then we agree that somebody with a little more on the ball might just make for a better mayor. His constant whining about being trapped in the city with no way out without federal intervention just didn't play with an awful lot of people - just about everybody that I spoke to. We saw the busses, we saw the parked cars. What the rest of the country, and the world in fact saw was a bunch of idiots that were either too stupid or too lazy to get out. And then of course we saw the looters who were just in it for themselves, not giving a damn about anyone but themselves. The world, through the eyes of FOX and CNN, saw both the best and the worse. They will remember the worse.

I doubt very much he would have been tarred and feathered for trying to protect the fine people of New Orleans. He could have stuck in the usual disclaimer - "Not sure if the hurricane is going to strike here in NO, but for safety's sake I and the Governor have decided to provide transportation out of town for those who wish to evacuate bla bla bla.."

All they had to do was to get the people to higher ground. It is only themselves that the people of new Orleans have to blame. We can only hope that the levys are fixed for good and this never happens again.

Im Hotep,

Here is some more healthy, nutritious mind food for you DXass, and RHF,

Tim Wise essay on white privilege, Swimming in Racial Preference, in which the writer says, "(I)t is hardly an exaggeration to say that white America is the biggest collective recipient of racial preference in the history of the cosmos."

WHITE PRIVILEGE: Swimming in Racial Preference

http://www.tolerance.org/news/article_tol.jsp?id=722

By Tim Wise

March 6, 2003 -- Ask a fish what water is and you'll get no answer.

Even if fish were capable of speech, they would likely have no explanation for the element they swim in every minute of every day of their lives. Water simply is. Fish take it for granted.

So too with this thing we hear so much about, "racial preference." While many whites seem to think the notion originated with affirmative action programs, intended to expand opportunities for historically marginalized people of color, racial preference actually has had a long and very white history.

Affirmative action for whites was embodied in the abolition of European indentured servitude, which left black (and occasionally indigenous) slaves as the only unfree labor in the colonies that would become the U.S.

Affirmative action for whites was the essence of the 1790 Naturalization Act, which allowed virtually any European immigrant to become a full citizen, even while blacks, Asians and American Indians could not.

Affirmative action for whites was the guiding principle of segregation, Asian exclusion laws, and the theft of half of Mexico for the fulfillment of Manifest Destiny.

In recent history, affirmative action for whites motivated racially restrictive housing policies that helped 15 million white families procure homes with FHA loans from the 1930s to the '60s, while people of color were mostly excluded from the same programs.

In other words, it is hardly an exaggeration to say that white America is the biggest collective recipient of racial preference in the history of the cosmos. It has skewed our laws, shaped our public policy and helped create the glaring inequalities with which we still live.

Income and inheritance
White families, on average, have a net worth that is 11 times the net worth of black families, according to a recent study; and this gap remains substantial even when only comparing families of like size, composition, education and income status.

A full-time black male worker in 2003 makes less in real dollar terms than similar white men were earning in 1967. Such realities are not merely indicative of the disadvantages faced by blacks, but indeed are evidence of the preferences afforded whites ï¿½ a demarcation of privilege that is the necessary flipside of discrimination.

Indeed, the value of preferences to whites over the years is so enormous that the current baby-boomer generation of whites is currently in the process of inheriting between $7 trillion and $10 trillion in assets from their parents and grandparents ï¿½ property handed down by those who were able to accumulate assets at a time when people of color by and large could not.

To place this in the proper perspective, we should note that this amount of money is more than all the outstanding mortgage debt, all the credit card debt, all the savings account assets, all the money in IRAs and 401k retirement plans, all the annual profits for U.S. manufacturers, and our entire merchandise trade deficit combined.

Yet few whites have ever thought of our position as resulting from racial preferences. Indeed, we pride ourselves on our hard work and ambition, as if somehow we invented the concepts.

As if we have worked harder than the folks who were forced to pick cotton and build levies for free; harder than the Latino immigrants who spend 10 hours a day in fields picking strawberries or tomatoes; harder than the (mostly) women of color who clean hotel rooms or change bedpans in hospitals, or the (mostly) men of color who collect our garbage.

We strike the pose of self-sufficiency while ignoring the advantages we have been afforded in every realm of activity: housing, education, employment, criminal justice, politics, banking and business.

We ignore the fact that at almost every turn, our hard work has been met with access to an opportunity structure denied to millions of others. Privilege, to us, is like water to the fish: invisible precisely because we cannot imagine life without it.

The point of points
It is that context that best explains the duplicity of President Bush's recent criticisms of affirmative action at the University of

Michigan.

President Bush, himself a lifelong recipient of affirmative action ï¿½ the kind set aside for the mediocre rich ï¿½ recently proclaimed that the school's policies were examples of unfair racial preference.

Yet in doing so he not only showed a profound ignorance of the Michigan policy but also made clear the inability of yet another white person to grasp the magnitude of white privilege still in operation.

The President attacked Michigan's policy of awarding 20 points (on a 150-point evaluation scale) to undergraduate applicants who are members of underrepresented minorities (which at U of M means blacks, Latinos and American Indians). To many whites such a "preference" is blatantly discriminatory.

Bush failed to mention that greater numbers of points are awarded for other things that amount to preferences for whites to the exclusion of people of color.

For example, Michigan awards 20 points to any student from a low-income background, regardless of race. Since these points cannot be combined with those for minority status (in other words poor blacks don't get 40 points), in effect this is a preference for poor whites.

Then Michigan awards 16 points to students who hail from the Upper Peninsula of the state: a rural, largely isolated and almost completely white area.

Of course both preferences are fair, based as they are on the recognition that economic status and even geography (as with race) can have a profound effect on the quality of K-12 schooling that one receives, and that no one should be punished for things that are beyond their control.

But note that such preferences ï¿½ though disproportionately awarded to whites ï¿½ remain uncriticized, while preferences for people of color become the target for reactionary anger. Once again, white preference remains hidden because it is more subtle, more ingrained and isn't called white preference, even if that's the effect.

But that's not all. Ten points are awarded to students who attended top-notch high schools, and another eight points are given to students who took an especially demanding AP and honors curriculum.

As with points for those from the Upper Peninsula, these preferences may be race-neutral in theory, but in practice they are anything but.

Because of intense racial isolation (and Michigan's schools are the most segregated in America for blacks, according to research by the Harvard Civil Rights Project), students of color will rarely attend the "best" schools, and on average, schools serving mostly black and Latino students offer only a third as many AP and honors courses as schools serving mostly whites.

So even truly talented students of color will be unable to access those extra points simply because of where they live, their economic status and ultimately their race, which is intertwined with both.

Four more points are awarded to students who have a parent who attended the U of M: a kind of affirmative action with which the President is intimately familiar, and which almost exclusively goes to whites.

Ironically, while alumni preference could work toward the interest of diversity if combined with aggressive race-based affirmative action (by creating a larger number of black and brown alums), the rollback of the latter, combined with the almost guaranteed retention of the former, will only further perpetuate white preference.

So the U of M offers 20 "extra" points to the typical black, Latino or indigenous applicant, while offering various combinations worth up to 58 extra points for students who will almost all be white. But while the first of these are seen as examples of racial preferences, the second are not, hidden as they are behind the structure of social inequities that limit where people live, where they go to school, and the kinds of opportunities they have been afforded.

Undercurrents of privilege
White preferences, the result of the normal workings of a racist society, can remain out of sight and out of mind, while the power of the state is turned against the paltry preferences meant to offset them.

Very telling is the oft-heard comment by whites, "If I had only been black I would have gotten into my first-choice college."

Such a statement not only ignores the fact that whites are more likely than members of any other group ï¿½ even with affirmative action in place ï¿½ to get into their first-choice school, but it also presumes, as anti-racist activist Paul Marcus explains, "that if these whites were black, everything else about their life would have remained the same."

In other words, that it would have made no negative difference as to where they went to school, what their family income was, or anything else.

The ability to believe that being black would have made no difference (other than a beneficial one when it came time for college), and that being white has made no positive difference, is rooted in privilege itself. The privilege that allows one to not have:

* to think about race on a daily basis;
* one's intelligence questioned by best-selling books;
* to worry about being viewed as a "out of place" when driving, shopping, buying a home, or for that matter, attending the University of Michigan.

So long as those privileges remain firmly in place and the
preferential treatment that flows from those privileges continues to
work to the benefit of whites, all talk of ending affirmative action
is not only premature but a slap in the face to those who have fought,
and died, for equal opportunity.

Tim Wise is an antiracist activist, essayist and lecturer.

I think you will find that a side-by-side comparison of reception on any of the high-end receivers will show them to be more similar than different. Said another way you will likely hear the same stations on an NRD525 that you will on the R75 or a Kenwood R5000. The 525 is close to reaching classic status and it has a following of very loyal users.

At the risk of being handed my head for asking the obvious are the RF gain set to max and RF attenuator set to wide open?

Assuming the radio is set up correctly and the antenna has a good connection the next question is how the receiver performs in comparison to another. Do you have another shortwave receiver, even a portable? If so try for the powerhouses on 6mhz at night.

> broadcasting off the same antenna.
>
> Frank Dresser

Not likely. IBOC requires a particularly broad, even spectrum off the antenna. AM antennae, though broader than comm antennae, are still frequency specific. Stations of such disparate frequencies would be hard pressed to meet the flat response required by IBOC on both stations if combined into a single antenna.

That's not to say it can't be done. But the cost of doing so, and for experimentation at that, would be far outside BlackRock's capital budget caps. Not to mention the potential power/pattern repercussions once the CP was filed. Modification of existing physical plant could open the door to counter filings, potential protracted legal battles, and even challenges to existing licenses/operating parameters.

As boneheaded as CBS Radio has been around here in the last 8 months, even THEY aren't that stupid.

Then, again.....

I am really having a hard time with local interference in my apartment building. I get good reception outside and away from the building, but it's cold outside at night when I do most of my listening.

I have a Sony ICF-SW7600GR and a Degen DE31 active loop antenna. Both are running on batteries. The DE31 doesn't usually strengthen the signal much because the whip antenna is right by a window. Maybe I haven't tuned it carefully enough. The window that's convenient for me to use is facing north-northeast.

My apartment building is plagued by dimmer switches, televisions, and my own computer (which I try to keep away from the radio).

Could anyone suggest anything that could help reduce the interference?

Im Hotep,

Calm down you paranoid schizo's!

What he is doing is not racist; it is payback!

Whites tried to do the same thing in Africa that they did to blacks, Latinos' and Indians in America. The reason it failed is that in Amerikkka they had the superior numbers to force their violent, devilish nature on the people of color. So they maruded at will.

In Africa, they are outnumbered, and some of the smarter leaders like President Mugabe finally got tired of whites stealing the best lands by force and forcing the native Africans to live on next to mothing.

So he gave them an ultimatum. Give up the land that you stole, or die!

Many whites died. Many whites left. Who cares! In any case the land is being returned to black people.

Whites just need to accept their minority color status around the world. They must learn to share things with their beautiful mellinated neighbors instead of trying to kill all of them to get what they want.

As you show, shall ye reap. Whites over there sowed some bad seeds, and they are now paying the price of it.

I say all the rest of Africa needs to do the same thing. Whites need to stay in their homelands if they are crooks, and let Africa build itself. Whites must stop being bloodsuckers, The world doesn't buy their "holier than thou" crap anymore.

President Robert Mugabe is a strong unafraid black man!

I asmire him.

Looks like 1991.

Are you sure that second digit isn't a letter? Also, that doesn't look like a proper Drake serial number. I've had a few (from 1991 on) and they follow this format:

The first digit in the serial number represents the year, 9 = 1999, 0 = 2000, 1 = 2001, etc. The second digit is a letter and represents the month, A = January, B = February, C = March, etc. The next four numbers represent the model number. The last four digits are the unique serial number to that particular unit.

My current R8 is 2C12900037

So you're saying that blacks should be kicked out of America, 'tard boy?

Would you prefer air transport, or seaborne travel?

Guess I'd have him check it again, as it doesn't look right. I've had one of the first off the assembly line and they follow the format I explained. The same format was continued with the R8A and R8B. Only change with those two was the model change in the serial number.

Rewritting history according to the CCP. Your specialty. Unfortunately people in the free countries have access to the true history about the Communists in China during WW2. Which Communist Chinese University did you graduate from "John"?

> Beginning with Kissinger in the 1970's the
> U.S. has been backing away from that relationship.

No, your short more that a quart. I'm afraid your information is obviously biased, inaccurate, lopsided, dated and clearly Nationalistic. The moment Communist China's PLA steps one toe on Taiwan is the day that the Chinese Communist Party begins to burn on the ash heap of history. Believe it, Comrade!

Large numbers of stations in metro areas are already sharing antenna
systems. Most have done this either in order to decrease the number of
physical plants or to simply save on leasing of or purchase of land for
antenna systems. The towers themselves are only truly narrowband at
resonance. When two (or even more) transmitters share a system, at most one
of them will be at resonance. As far as the matching hardware, it can be
engineered to be as broad as it needs to be.

1979. Re: Building a Solid Copper Ground Pipe {Tube} with an Solid Iron ...

The first house I moved into after I got out of collage and started working back in the early 70's was built around 1920. This is in California; it had all steel plumbing for fresh water and cast iron for waste water. All steel and Iron, except for the elbow fitting between the cast iron 4 inch diameter waste line and the toilet. That was cast lead and a push fit into the ceramic bowl and the iron pipe. There was not even a closet flange. Man, did it leak......

When I moved in I had to re-plumb everything, so it all became plastic and copper.
It was ok, though, because unlike many houses in California it had a basement and you could get access to the pipes without lying on the dirt and working in a tiny crawlspace.

Taiwan has not nor will it EVER host the Olympics. To host the
olympics a geographic location has to be recognized as a country and
Taiwan will not attain that status. Too bad it isn't otherwise, but
the world of politics is a tough place at times.

It would help protect you from making further erroneous statements if
you read up on the history of Taiwan. It has a very short history as a
pseudo independent country. It has a much longer history as been one
of being occupied - indeed centuries. The only reason the U.S. called
Taiwan indepdent was to provide a buffer against the perceived
communist threat and to counter conserns over the domino theory.

Like it or not the U.S. has since Kissinger/Nixon policies of the
1970's been opening the door for China and gradually shutting it on
Taiwan. You can continue to wish it otherwise, but the reality of the
world that Taiwan will have to exist in is quite different.

I have the Kaito 1101. It's an absolute bargain! It actually outperforms my Sony 7600GR on SW, except for the lack of a sync dectector, which helps stabilize the 7600GR. It's OK on MW, not terrific, but fine for casual listening. Excellent audio for the size.

Couple of minor drawbacks:
The rechargeable batteries seem to need recharging after about 15-20 hours of use, Limited # of memories (10 per band, incl 20 for SW). No SSB (I have several other radios with SSB so it's not a big deal that the 1101 lacks this). ---Ken

If I could go back in time and meet any person in history, Ben Franklin would be right near the top of my list, maybe #1. What a fascinating character. He did everything... a true Renaissance man, even though he was very much a product of the Enlightenment.

I really like some of his lesser-known writings, such as "Fart Proudly" and "Advice to a Young Man on the Choice of a Mistress." He had an amazing sense of humor!

Jackie

Yea he was quite a character but so were all those guys in that clique. As
far as a genius / womanizers go, Thomas J. wasn't far behind him. All those
men loved to party in excess as well. But what would we have done without
them?

Thanks to everyone for taking time to answer. I'll stick with the NRD-525 and try to fix up the antenna a bit. Right now it is just a wire stuck through a hole in the wall of my concrete block and stucco house and tied to a tree. No insulators, no coax, just wire. That has to be some of the problem.

Lisa:

I have owned several Degen/Kaito radios-- the KA-1101, KA-1102 and DE-1103--
all are excellent bargains in their class. The KA1102 is my "little
workhorse" and, while no super-DX machine, it manages to pull in everything
my erstwhile Sangean ATS-803A used to before it bit the dust. I've also had
a Tecsun PL-350 and a couple other small portables that ranged from fairly
deaf to pretty good.

I used to own an Icom IC-718, which is the "ham radio" version of the
venerable R75. The difference being that the IC-718 is a transceiver. I used
it for getting my DXCC (100 DX countries) while I was active in amateur
radio. But I also heard and logged many, many SW broadcasters on that rig. I
sold it about a year ago, because I'm no longer active in amateur radio and
I currently live in RF Hell-- maybe someday, I'll get another. That was a
very, very good rig for the money.

While I am not 100% sure this is the case, I believe the R75 and IC-718 have
the same receiver-- anyone in the know out there wanna chime in on that?
I've fiddled around a number of high-end transceivers and receivers-- all
were very good performers, but some cost a LOT more than others. The IC-718
cost me less than $500 new.

Although I certainly don't consider myself an antenna expert, I've done a
fair amount of reading about them and I've made several of my own, so I can
vouch for the idea of putting effort (or money, if you don't care to make
your own) into a decent antenna. The problem with small portables is that
they tend to overload with a decent outdoor antenna. The Degens/Kaitos are
really pretty good just off the whip, or using the small plug-in antenna
that comes with them. But if you're really into shortwave listening and want
to spring for a really good tabletop rig, a very good antenna will go a
long, long way in helping you to hear as much as you're able, given other
factors you can't control.

A big factor in the ability of shortwave signals to propagate is the sunspot
cycle. We are near or at the bottom of the sunspot cycle now, which means
fewer stations will be heard overall. It should improve somewhat over the
next couple of years, with another peak in about 2010 or 2011. But there are
other factors that determine where and when any signal can be heard, so
don't let the sunspot doldrums thwart your SWL fun.

As a previous poster submitted, the Eavesdropper and Alpha-Delta antennas
are very good choices. I can also point you to some websites where you can
find designs to build your own antenna. There really isn't much to building
a simple long wire or dipole, and it's really satisfying to build an antenna
that will help you to hear the world. I was able to chat with a lady ham in

the Marquesas Islands using a dipole I built myself. It took me all of 45 minutes to make it and string it up in a nearby tree, with some help from a neighbor. I used that same antenna to listen to many shortwave broadcasters too.

The rule for antennas I learned was: get as long an antenna as you can (or as tall as you can) up as high as you can. That said, there are other installations that can work well for listening purposes-- snaking as much wire as you can around a balcony; tacking up a thin wire along the ceiling of a living room, for instance.

A friend of mine actually ran a bunch of wire along his metal rain gutters and, using an antenna tuner, was able to talk to the world. Pretty cool...

Good listening and 73 (that's best wishes in ham-speak),

Jackie

> Large numbers of stations in metro areas are already sharing antenna
> systems.

When AMs share antenna systems, most are non-directional. A number of cases exist where a directional AM share a single tower with an non-D station, like 1390 and 1680 in Chicago. 1390 is directional, but the X Band staiton just uses one tower. The efficiency of doing this vs. cost is good.

Not too many shared directionals exist, as the system has to be able to create the appropriate pattern for each station, and that is a relationship of phase and current and wavelength spacing of the towers.

When directionals share, it is in cases lik KTLK and KTNQ in LA, where the towers could be made to work for two fairly similar systems. This cost over $1 million to do, just for the tuning units and rejection networks... not including towers and transmitters and buildings. It took the best DA guy in the US, Ron Rackley, over a month to tune it.

The only case where share DAs by two directinal stations makes sense is where there simply is no land available. The cost and maintenance is very high, and it is not done to save money.

> Most have done this either in order to decrease the number of physical
> plants or to simply save on leasing of or purchase of land for antenna
> systems. The towers themselves are only truly narrowband at resonance.

Actually, this has little to do with the tower. While a wider face tower is easier to broadband, most of the bandwidth at a particular frequency has to do with the Q of the tuning circuits in the system. In earlier times, higher Q systems were designed as they were chaper, easy to adjust, etc.

When two stations tune to a tower, each has a tuning system (ATU or antenna tuning unit) that matches the line impedance to the tower impedance. Then, there are rejection networks to let each station feed into the tower, but not allowing the RF from one to get back into the trnsmitter of the other.

As long as the system is broadband, the signal will be broadband.

> When two (or even more) transmitters share a system, at most one of them
> will be at resonance. As far as the matching hardware, it can be
> engineered to be as broad as it needs to be.

Very few towers are a perfect 50 ohms with no reactance. So all require matching. What changes, based on tower height, is the efficiency of the radiator and the angle of radiation (each of these being about the same thing) but I have seen 1/8 wave towers tuned for great bandwidth with high Q circuits. In fact, I had an 8th waver at 570 that I diplexed a station at 805 into, and we had both sounding great because we made the bandwidth at each frequency very good at up to plus and minus 15 kHz, and the filter nets were very specific to each frequency against the other.

Thank you! I am having trouble with the charger; it acts like it's charging, then shuts off. I finally got it to "charge" overnight, and the batteries were still dead in the morning! I put 3 regular batteries in it & the radio is working fine. I put the batteries in a separate battery charger I have to see if maybe I got bum batteries; if not, I'll assume the charger is bad & try to get it replaced . . .

You would be surprised how good a long end fed wire can be. I spent a long time with just a 100 foot wire wrapped around a nail next to my window and thrown into a tree. There was maybe 80 feet between the window and 20 feet hanging down from the tree and tied to a brick. This kept the line fairly tight in the wind. I used this with my Sangean 803 for years. It was a grand improvement over the whip. It was only when I got the Icom R-75 that I started to use more sophisticated wire.

Since when is it the job of government to find places for people to
stay?

I claim it's not even the job of government to provide transportatoin
out of a city, but for _sure_ it's not the job of government to provide
housing for people. Even if government buses got them out of the city,
where they went next was a matter of their savings, their families,
etc.

Free To Air [FTA] MPEGII "small Ku band dish" satellite systems are relatively cheap. But what is available as "free programming" is by far mostly foreign broadcasts. Lots of Arabic language Arabic government paid for TV programming (propaganda), Some Spanish and Christian religious programming. If you get a fairly large dish (1.5 meter diameter) you can pick-up remote newsfeeds which can get interesting during a significant "news event", I.E. 9/11.

Before you make a decision peruse the following web site to get a feel for what satellites are visible over your location (very important) and what type of free programming may interest you: http://www.lyngsat.com/index.html

Please name one moment in time when the Chinese Communist Party has ever set foot on Taiwan. Just one!
There are no, none, nada, historical facts to prove that the current Communist regime in Beijing has ANY claim upon Taiwan. In fact Taiwan has never been claimed as a part of mainland China before 1949, never, in all of history. In fact, since you are obviously ignorant of the facts, an ancient emporer of China had refused to encompass Taiwan in its military defense saying so much as Taiwan is not a part of China. Futhermore, if you beleive that the U.S. would allow the Communist government in Beijing to simply walk on water onto democratic Taiwan with its full blessings than you are completely ignorant.

You seem to enjoy wasting my time with your ignorance. Perhaps a trip to the Asian history department of your local University may be better to "fill in your idle time".

> no-sun periods.

There should be a large difference due to a lack of direct energy input during the no-sun period. There is
no doubt that the desert can be extremely warm during exposure to the sun and cool down to somewhere near
freezing during the no-sun times. The cooling would be more extreme without some form of heat retention by
the atmosphere.

Effects were felt for approx. 5 years after the eruption. If you are a farmer with 5 years of weather that
isn't compatible for growing your crops then 5 yrs will seem like a long time.

There's precious little solar infrared that gets in otherwise the upper atmosphere and space would be much
warmer than they are. It is the interaction of high-energy wavelengths with molecules in the atmosphere or
with the earth and then the subsequent re-radiation that generates heat. The CO2 lets in high-energy
radiation from space and helps to retain the re-radiated thermal energy.

O3 production can hardly be described as prolific. Otherwise it would be well above the 3
molecules out of
10 million air molecules.

>

Right. Ozone is produced a little faster than it is destroyed by UV. If you start to add in
other
compounds capable of destroying ozone in essentially a catalytic fashion then you begin to
destroy that
equilibrium and you end up with a deficiency of ozone.

Earth heats up quickly and cools down quickly. Water heats up slowly and cools down slowly.

If you are right about this then Lisa could check her radio with WWV on
5 and 10 MHz and see if the time standards station is 5 KHz high.

Portable radios do best with strong signals since they operate off a
whip antenna. Strongest signals your time would be dusk to dawn on 90
meters 5,900 KHz to 6,200 KHz and 31 meters 9,400 KHz to 9,900 KHz.

Generally search the lower SW bands during darkness and the higher bands
during daylight hours. Highest band doing well these days is 16 meters
17,480 KHz to 17,900 KHz.

For daytime hours use a external wind up antenna if your radio came with
one.

>* Felony Convictions which Bar - The Right To Vote under Law.

>
Here is where the mischief was done. First, former felons from other states who had their voting rights restored were removed from the rolls despite two rulings from the Fla.State Supreme Court in the previous two years that this violated Fla. law. For years a company in Fla. had compared prison lists with voter rolls to remove felons for $5000 a year. The (Jeb) Bush gang took a more agressive tack. A repub connected firm named Data Base Technologies got the contract, (@2 years for 2.4 million.) They got lists of felons from other states to work from. The first list came from Texas but " mistakenly" contained names of those convicted of misdemeanors as well. A second "corrected" list made the same error. I imagine this error was repeated in some other states as well. Only a rough match was required to remove a voter from the rolls. Adresses and S.S. numbers didn't have to match. D.O.B.s didn't have to match. Only an 80% match was required on the names, so a felon named say, Al Cooper, could knock an Alan or Allen or Albert Cooper off the rolls and 2 or 3 other Al Coopers as well. The only required 100% match was race. This is how a random list of names could produce a group that was 54% black, roughly matching the prison population.
Fla. actively prosecutes people who vote illegaly. Early in his investigation, when the number of known, removed "felons" stood at about 47,000 Palast asked the Fla. attorny general how many of these cases were pending prosecution. His answer was 3. There was a congressional inquiry after the election into the chicanery in Fla. A spokesman from Choice Point, which had aquired DataBase Technologies, testafied that more than 93,000 voters had been removed from the rolls as "felons" and of these, perhaps, 3,000 were actually inelegible to vote. A much more detailed and entertaining account of all this can be found at www.gregpalast.com . Highly reccommended.

Antennas can have a broader response by increasing the diameter of the vertical radiator. This can be done by running at least three wires around the tower 120 degrees apart with a ring connecting them together top and bottom minimum. This is much cheaper than constructing a larger diameter tower. Increasing radiator diameter to broaden the response is a general rule that can be applied to most antennas.

Yes FDR I tend to oversimplify, but, Ray didn't need to bus everybody out. Just make transportation available for those that needed it. Wasn't there a bunch of people stuck in a nursing home. I seem to recall about 30 drownings. It was plain as day that there were a bunch of people who just didn't get out of town for one reason or another. Stupid and Lazy come to mind and I recall seeing a bunch of people looting stores. And they weren't looting the kinda things necessary to sustain life. Food & water, no problem, open up the grocery stores. But TV sets and stereos????

Ok, so bus the people to the same places they ended up. A minor tweak to the timing is all that is required Just bus them out BEFORE the hurricane lands. Ok, so I'm doing the oversimplifcation thing again. I realize the logistics of the problem. You can't just bus them out to the city limits and kick them off the bus. That is why a plan is needed before emergency strikes. And btw, any plans to deal with emergencies that include the federals should be suspected.

Again, I hope the levies are fixed right this time and the good people of New Orleans can get back to their normal life. I hope that Ray can make amends for the crap that flowed out of his mouth and be forgiven. I hear he's been eating a lot of humble pie today. I hope that GWB and his pals throws enuff money at this problem to take care of it once and for all. Every single taxpayer in the good old USA need to realize that this problem isn't going to go away by itself. If it is ignored it will come back ten fold.

Tim is 100% right. It is not the job of the government to provide transportation or housing for people. OTOH it is the job of the government to protect the people of this nation. To do what it can to help when it is needed. This is our way. These people desperately need help. Everyone should also realize that we are a giving culture. When you stop and think how much we all pay in taxes and how the gov't helps others in need with our money, you will realize that we all give an awful lot. We should all feel good that we are in a position to help others.

Here are some late logs from my trip to Ocean City State Park, WA, "land of horizontal rain". Deploying and taking down antennas at the WA coast in the winter beats running from scorpions and snakes like the Aussies do on their DXpeditions...but it still can border on miserable. Fortunately my DX van is a comfortable retreat amidst the chaotic weather.

Mediumwave TP DX was very, very lackluster, but the tropicals had some fun to them. On to the logs...

SHORTWAVE

AUSTRALIA 2310, 1345-1356, VL8A Alice Springs Jan 8 Discussion between announcer and an oncologist about various medical topics, including her work with other medical professionals with the cast of 'The Lord of the Rings' movie. Strong signal, parallel to VL8K Katherine. VL8T Tennant Creek on 2325 not heard. Same stations heard at 1016 on 1/9 with similar strengths. (Atkins-WA)

BOTSWANA 4930, 1740-1743, VOA Jan 8 Male announcers in English with talk that seemed to be about politics. African-sounding a capella vocals at 1742. Low level, poor signal. Quite a bit stronger on 1/9, with mentions of Africa, Washington, and United States by man. (Atkins-WA)

BRAZIL 4915, 2355-0004, R. Difusora Jan 9 Male and female announcers in Portuguese, with mentions of Macapa and R. Difusora. Promos and ads over the top of the hour. Fair to good, but co-channel QRM from Ghana until 2358. (Atkins-WA)

CHINA 4905, 1728-1732, Xizang PBS Jan 8 Classical music with flute solo, parallel to 4920 (beneath co-channel AIR Chennai). Good level. Also heard 1/9 at 1705 with a fair signal. (Atkins-WA)

GABON 4777, 0550-0705, R. Diff. TV Gabonaise Jan 7 First noted at threshold level 0540, then slowly rising from the noise at 0540 with swift-talking French announcer and highlife music. Into more modern afropops 0555. Presumed ID and announcements by male and female announcers at 0600 with two mentions of Libreville and Gabon. Weak signal at best. (Atkins-WA)

GHANA 4915, 2355-2358, GBC Jan 8 Tuned in just in time to catch deep-voiced male announcer with ID 'This is the Ghana Broadcasting Corporation from Accra.' This was followed by a few more announcements of upcoming programs, and then off at 2358*. Strong co-channel QRM from R. Difusora, Macapa. Fair signal. (Atkins-WA)

GUATEMALA 4780, 0102-0108, R. Cultural Coatan Jan 9 Male announcer in Spanish with short music selections and IDs as 'R. Cultural Coatan,' and other mentions of Coatan. Fair signal. (Atkins-WA)

INDIA 3315, 1710-1713, AIR Bhopal Jan 8 Nice sub-continental vocal and tabla music, at fair level, one hour 20 minutes past local sunrise. (Atkins-WA)

INDIA 3323, 1620-1631, AIR Shimla Jan 9 Noted subcontinental music here, with Hindi vocals by male, and flute and tabla accompaniment. Female announcer at 1630 with possible ID, but signal too weak to be sure. Tentative. (Atkins-WA)

INDIA 4760, 1618-1622, AIR Port Blair Jan 8 Tentative. Primative sounding male vocals in unid. language, with tabla and sitar. Good signal. Also heard with poor signal on 1/9 at 1715. (Atkins-WA)

INDIA 4860, 1721-1728, AIR Delhi, Kingsway Jan 8 Sub-continental vocals and accompaniment at tune-in; female announcer in Hindi at 1725 with mentions of Delhi. Back to vocals 1728. Fair to good signal, but only fair on 1/9 in same timeframe. (Atkins-WA)

INDIA 4920, 1734-1738, AIR Chennai Jan 8 News or discussion about a border dispute with unid. country, presented by a male announcer in English. ID as 'All India Radio' at 1735. Into Hindi at 1736. Good signal, but co-channel QRM from Xizang PBS and nearly equal level. Much weaker signal 1/9 beneath Xizang during the same timeframe. (Atkins-WA)

INDIA 4970, 0048-0057, AIR Shillong Jan 9 Presumed Shillong, with sub-continental female vocals to fade-out at 0057. Wish I'd happened upon this one earlier! Late afternoon Indians are not nearly as common as morning reception in the Pacific NW. Fair-poor. (Atkins-WA)

INDIA 4970, 1603-1613, AIR Shilong Jan 8 ID in English by female announcer at tune-in; male announcer with mention of 'North Eastern Service'. Into pop versions of classical music tunes. Excellent signal. (Atkins-WA)

INDONESIA 2960, 1018-1022, RPDT2 Manggarai Jan 9 Very weak level of Indonesian light chatter by male and female announcer. Indopops music 1020. Tentative. (Atkins-WA)

INDONESIA 3231.8, 1634-, RRI Bukittinggi Jan 9 Primative-sounding woodwinds and Arabic vocals, with two male announcers in Arabic. Frequent voice-over comments by announcers, as music continued with wailing, chants, and exotic flutes. Sudden change in music at 1658 with upbeat xylophone tune, then male announcer in Indonesian with 'RRI Bukittinggi' and mentions of frequency. Into Song of the Coconut Islands, and off at 1700*. Very good signal. I'm pleased with this catch, as I've not heard Bukittinggi for a while. (Atkins-WA)

INDONESIA 3345, 1406-1410, RRI Ternate Jan 8 Phone interview between male announcer and female caller at tune-in; mentions of Ternate. Into mellow Indopops music. Very good signal. (Atkins-WA)

INDONESIA 3976, 1416-1423, RRI Pontianak Jan 8 Usual excellent signal, with with slick-sounding advertisements and promo with mentions of Pontianak. 'FM' and 'frequency' by male announcer at 1422, with further numerous mentions of Pontianak. (Atkins-WA)

INDONESIA 4750, 1423-, RRI Makassar Jan 8 Strong but distorted, unlistenable signal that could barely be identified as Indonesian language. Looks like Makassar's having transmitter troubles again. Spectrum scope of the SDR-1000 showed a blurry mess of a signal. (Atkins-WA)

MAURITANIA 4845, 0045-0050, R. Mauritanie Jan 9 Traditional Arabic music, then male announcer in Arabic. Into Koranic recitations 0050. Good signal, but weakening past local sunset (0038). (Atkins-WA)

NORTH KOREA 3250, 1702-1708, PBS Jan 9 Usual strident talk in Korean, by two announcers. Fair, and parallel to 3320 which was much stronger. (Atkins-WA)

PAPUA NEW GUINEA 3205, 0936-, R. Sandaun Jan 9 Good signal with reporter discussing news items in Pidgin including bird flu in Asia, and developments in Australian politics. Other PNGs noted were: 3235 R. West New Britain (vy gd); 3260 R. Madang (vy gd); 3291.1 R. Central (pres.; off-freq. w/rel. tk in English; gd); 3305 R. Western (fair); 3315 R. Manus (gd); 3325 R. North Solomons (tent.; co-ch w/Palangkaraya, poor); 3335 R. East Sepik (fair); 3375 R. Western Highlands (fair-noisy); 3385 R. East New Britain (strong but low mod.); 3905 R. New Ireland (vy gd, w/ID at 1000); 4890 NBC (exc.); 4960 Catholic Radio Network (vy poor w/QRM); 7120 R. Wantok Light (Poor-tentative beneath strong CNR in Korean). (Atkins-WA)

PAPUA NEW GUINEA 3235, 1356-1401, R. West New Britain Jan 8 Male announcer in Pidgin with sign-off announcements including mentions of Kimbe and shortwave and mediumwave frequencies, goodbyes, and 'God Bless im You'. Into national anthem, and off at 1401*. Very good signal. (Atkins-WA)

RUSSIA 3955, 1409-1415, Voice of Russia Jan 8 Male and female announcers in Korean language; sounded like newscast. Tentative; per sked in DSWCI DBS 2005. Good signal. (Atkins-WA)

SINGAPORE 3915, 1715-1722, BBC Kranji Jan 8 Two male sportscasters with play-by-play of Manchester United soccer game. Excellent signal. (Atkins-WA)

SOLOMON ISLANDS 5019.9, 0926-0934, SIBC Honiara Jan 9 Devotion or Bible message in Pidgin by enthusiastic preacher at 0926, followed by brief promo for religious program. Ad for 'your number one dealer' (cars?), and cell phone service ('You needim call? You makim call! Mobile phones for you..') Into acoustic guitar and island vocals 0934. Very good signal. (Atkins-WA)

SOUTH AFRICA 3320, 0120-0125, R. Sonder Grense Jan 9 Two male announcers with interview or roundtable discussion. Into pop music at 0125. Good level. (Atkins-WA)

SWAZILAND 3200, 1704-1710, TWR Mpangela Ranch Jan 8 Sermon or devotion in English; recognized speaker as Charles Saunders. Fair level on morning longpath. (Atkins-WA)

VANUATU 3944.8, 0912-0925, R. Vanuatu Jan 9 Good but noisy signal, with female announcer in Pidgin taking phone calls from listeners; evidently talking about New Year's resolutions. Choral singing and ukelele music at 0919. More well-wishes and 'happy New Year to you all' at 0925. (Atkins-WA)

ZAMBIA 4910, 1720-1728, ZNBC Radio One Jan 9 Lively Afropops music, and male announcer in unid. African language. Good signal initially at tune-in, but very rapid fade just past Lusaka sunset. (Atkins-WA)

ZAMBIA 4965, 0005-0045, R. Christian Voice Jan 9 Male announcer in English concluding some news items at 0005 tune-in. Short devotion on drawing near to God, then into steel guitar and vocals version of 'Just As I Am' hymn. This was followed by a piano instrumental piece, brief comments by announcer, then a country western version of 'This Is My Story, This Is My Song' and Wesley's 'And Can It Be'. ID by male at 0030. Poor-fair level initially and slowly improving to good by 0035, then rapid fall-off as local sunset passed the WA coast. An excellent example of sunset-at-the-receiver enhancement. Also noted with weak signal on 1/9 at 1728 via morning longpath. (Atkins-WA)

MEDIUMWAVE
---
738 TAHITI RFO Papeete, Jan 9 1032 - French talk by male announcer, and into French lang. pop music at 1037. Poor to fair signal. (Atkins-WA)

738 UNIDENTIFIED , Jan 8 1623 - Low level Aussie-accent English with male announcers. Signal back into the noise by 1625. 2NR Grafton?. (Atkins-WA)

738 UNIDENTIFIED , Jan 8 1250 - Scraps of weak Japanese talk heard here, and only in for a minute or so before disappearing into the mud. Noted briefly again with male Japanese announcer at 1311. Checked 1152 for possible JORR Okinawa parallel, but heard nothing. This is the first time I've heard Japanese language on 738 (definitely not Korean or Chinese). (Atkins-WA)

774 JAPAN JOUB Akita, Jan 9 1038 - Beautiful signal of romantic female vocals in Japanese; male and female announcers in Japanese at 1041. Fading severely by 1042, however. (Atkins-WA)

972 SOUTH KOREA KBS Liberty 1 - HLCA, Jan 8 1641 - Orchestral music and female announcer in Japanese (listed as JJ in PAL 1600-1700). Poor signal; presumed. (Atkins-WA)

1134 JAPAN JOQR Tokyo, Jan 9 1549 - Just about the only TP with audio this morning. Japanese talk by male and female announcers, jingle, and briefly into light jazz Japanese vocal number by female.before returning to announcers. Poor to fair signal. (Atkins-WA)

1242 UNIDENTIFIED , Jan 9 1558 - Weak signal with scraps of what seemed to be Japanese talk. JOLF Tokyo is the usual suspect on 1242. (Atkins-WA)

1566 SOUTH KOREA HLAZ Cheju, Jan 9 1050 - Strong signal of Christian vocals 'He Will Save You' at tune-in. Female and male announcers at 1053, and 'H-L-A-Z' ID by woman in Korean at 1054. Orchestral music and male soloist at 1055. Suddenly off at 1055. (Atkins-WA)

1566 SOUTH KOREA HLAZ, Jan 8 1649 - Noted with light EZL music and Chinese language announcers. Initially poor-fair, but complete fade by 1654. Slightly above noise again by 1701. (Atkins-WA)

FM systems share antennae all the time. AM's though, not so much. To materially change the system, would require a CP which would open the installation to challenge. This is particularly true of modifying existing AM's to share common antennnae. Even omni's.

Thanks for the responses. I thought I would post a follow up in case anyone is interested. Here is the station ID I recorded on 6120Khz 1:30UTC 1/18/06 from the Iranian SW station. The signal varied from clear and understandable (like the audio file) to less so as it dropped closer to the noise floor of my setup. There was a persistance clicking that was less pronounced on LSB so that is where I tuned it..

I suffer from the same dilemma here too. My best guess towards a solution is to just move somewhere else. I've tried a few things, but hardly anything I've heard suggested really works. Wish I could be of more help. I suppose I was kind of glad to see that me, myself and I aren't the only ones that have that trouble. I'll be watching for suggestion from folks out there too. Take care.

Yes, that'd be a place to start. Of course, the eham reviewer's
wording did suggest that perhaps the radio was not always 5 kHz off in
the frequency displayed. Then, too, one might ask if there are degrees
to which various units might be afflicted with this sort of behavior.
In any case, now that she has the Degen, she can run them side-by-side
and get a better idea of the virtues and limitations of of both the
Mini and the Degen.

I have the ANC-4. It wasn't very expensive (about $100), and it was
effective when I used a long wire. Since I went to a Wellbrook, I don't
use it anymore. I suppose I could ebay the ANC-4, but I understand
there are ways to use two loop with the ANC-4 to make a really deep
null while still aiming the main antenna at the desired signal.

Actually, I got the old ANC-4 when JPS was making consumer products.
The Timewave version is about twice the price.

http://www.universal-radio.com/catalog/preamps/0094.html

Here is the MFJ version:
http://www.universal-radio.com/catalog/preamps/3541.html

I'd get the wellbrook before I bought any of these noise cancellers.

Bench tested: I put the radio on a bench, and listened to a weak
signal.

If it was bench tested, you would damn well bet Radio-Mart(RM) would be
publishing the test specs.

And how does he know this radio was modded by icom? Any fool can swap
out connectors.

Is there no limit to how much Radio-Mart will lie? He should quit ebay
and go work for Bush. They like liars.

WeatherAll,

1. Better/Bigger Antenna = More Signal
[Improved Antenna Position = Cleaner Signal and Less Noise]
Try a simple On-the-Window Spiral Wire Antenna :
Use a Thin #28-36 Magnet Wire or #30 Insulated Kynar Wire Wrapping
Wire taped directly to the Window with Clear Scotch Tape.
Start with the Wire Antenna Element spaced 3" from the Edges of
the Window and then use a Space of 1" in between wire element runs.
Note - this is a Passive {Non-Amplified} Antenna.
Then - Clip the Outer-end of the Antenna Wire to the Whip Antenna
of your 'portable' AM/FM Shortwave Radio.
Note - Collapse the Radio's Whip Antenna with just the Tip-End
exposed to Clip-on-to.

2. Use a Grounding-Point {If} Where Available :
Try using a "Gound" for your 'portable' AM/FM Shortwave Radio
while it is operating on Batteries.
* Take a 1/8" Mono-Plug that fits into the Headphone and External
Antenna Jack of your Radio.
* Remove the End-Tip from the Plug - Leaving just the Rear-Barrel.
* Connect a piece of Insulated Hook-Up Wire to the Mono-Plug's
Barrel Connection.
* Connect the other end of the Insulated Hook-Up Wire to a
Grounding-Point withing the Room. A Cold Water Pipe ?
Try using the Metal Frame of the Window for a Ground.
Sometimes depending on the building construction the
Metal Frame of a Window is the best Grounding-Point that is
available to use in an Apartment or Condo where NO Outside
Ground Rod is permitted.
Note - The Metal Window Frame as a Grounding-Point is a
viable opinion for many Shortwave Listeners (SWLs) when
they are Powering a 'portable' AM/FM Shortwave Radio
with Batteries in an Apartment or Condo.
* Then - Connect {Plug-In} the Barrel-End to the External Antenna
Jack of the Radio. Test your Reception for Improved Signal
and/or Lower Noise = Better Signal-to-Noise.
* Next - Connect {Plug-In} the Barrel-End to the Headphone Jack
of the Radio. Test your Reception for Improved Signal and/or
Lower Noise = Better Signal-to-Noise.
Note - Either ground 'connection' may or may not improve
the signal and/or the noise.

TIP Convert the On-the-Window Spiral Wire Antenna to a
On-the-Window Loop Antenna.

* Remove the inner-most one or two Spirals to from a
Far-Loop-End.
* Place a piece of Clear Scotch Tape across the other Spiral
Windings as an Insulator between the Wires. Use a second
piece of Clear Scotch Tape to Run and Secure Far-Loop-End
to the Outer Starting-Point of the Spiral = The Near-Loop-End.
* Connect a Wires from a Shielded Audio Cable (that has a
Mono-Plug on the other-end) to the Near and Far Ends of the
Loop Antenna Element. Near-Loop-End Wire to the Shield
-and- Far-Loop-End to the Audio Cable's Inner Conductor.
* Plug the Mono-Plug of the Audio Cable into the External
Antenna Jack of the 'portable' AM/FM Shortwave Radio.

WeatherAll - Enjoy Listing to your Radio.

hope this helps - iane ~ RHF

I looked at the list....
I'd stick with the Icom, get a good antenna out and search the bands.

I actually helped a fellow engineer friend of mine make that modification to an AM tower in Portland, OR a few years back. Was a lot of fun to say the least, especially when the station was using a backup tower only a few 10's of feet away, and when our ground wire would work it's way loose, you could draw a nice arc reconnecting it. :) IIRC, we used fiberglass rods about 30" long as the standoffs. These were bolted directly to the tower, and the 14 AWG solid copper wire attached with tiny clamps at the ends. I don't remember at this point whether we ran loops anywhere besides top and bottom.

ROTFLMAO

My first mistrust of historical nomenclature came in a European History Class. Speaking about the German King Otto I (912-973) who wanted to be known as the temporal-not spiritual-sovereign of Christendom. Our professor made this point about Otto the Great's self-proclaimed Holy Roman Empire-the area he ruled. "The first point I would like to make about this kingdom," he said "is that it was neither Holy, nor Roman, nor an Empire."

Whether Otto's kingdom was "Holy, Roman, or an Empire or not" made little difference in the lives of us undergraduates. It didn't affect us; we had memorized it and that was that. The same could be said about many other historical titles and labels. Thus I began to develop a healthy skepticism of the convenient nomenclature used by historians. At the same time, however, I also began to realize that many times historical labels can affect lives. Too often they are used and manipulated to deny people basic human rights like self-determination as well as to disenfranchise people of their heritage. One classic example that remains is that of the Mongolians, Tibetans, Uighurs and Taiwanese.

Examine and judge for yourself some misnomers that continue in western historical parlance and point to a need of post-colonial revisionism. In 1206, the Mongol Ghengis (c.1162-1227) was named the Great Khan by the Mongol nobility. He would soon embark on one of the greatest conquests in the history of man. When he and his successors had finished the Mongol Empire extended from Korea to Hungary, from Moscow to India. So large was this empire that it was divided into four different khanates for administrative purposes, control and perhaps also to avoid Mongol in-fighting, or shall we say the "internal affairs" of the Mongol Empire.

One of the many countries that the Mongols conquered was the Chinese Southern Song Kingdom which finally fell in 1279. Before that they had conquered the lands in the west as well as the Tangut His-Hsia Kingdom (present day northwest China) and the Jurchen Jin Empire which had originated in Manchuria and encompassed present day north China and Beijing. They also had conquered Korea, Russia, Tibet and the Uighur people as they stretched their borders to present day Hungary. All of the above would then become one of the four khanates that the Mongol Empire was divided into.

Kublai Khan (ruling 1260-94) moved his capital to present day Beijing in the conquered Jurchen Jin Empire (1264) and named his rule Yuan in 1271. For Chinese historians, however, the Yuan Dynasty could only officially be recognized and begin in 1279 when the last of the Song Dynasty armies were defeated. Fair enough from their perspective.

When Marco Polo visited Kublai Khan circa 1274, most western history books will say that he visited China, but in reality, he crossed through vast amounts of "inviolable and/or inalienable" parts of the Mongol Empire and visited one of its capitals. He used the name Cathay which seems to have come from the Khitan people. Mongolian historians had recognized Kublai's title and rule over this part of the Mongol Empire. Unfortunately since the nomadic Mongolians were not strong on libraries, their sparse records and viewpoints are rarely recognized in the West.

For the Chinese historians following a select tradition, the Yuan Dynasty did not yet exist; however, the area around modern Beijing while part of a Khitan kingdom for over 300 years and not part of Song Dynasty China could still be considered China. Westerners continued to repeat such positions and when Marco visited Kublai's Empire, most western history books will conveniently say he visited China and not a Mongolian Empire; it is barely admitted that what Kublai ruled more than the soon to be conquered Song China.

The Mongolians never did have good marketing and/or public relations skills to get their perspective of history known. When the Chinese would conquer a land, it became a part of China, but when Mongolia conquered a land, it did not become part of Mongolia, at least as presented to and acknowledged by outsiders.

Part of this comes from a convenient inconsistency in the use of the name China. It is alternately applied to lands that used an administrative system developed by Han Chinese, to lands that exhibited Chinese culture but were ruled by others, to lands that had once been conquered by Han Chinese, and finally to lands that are ruled by the Han.. This allows for great flexibility in nomenclature so that one form can be used (in land acquisition) when another does not apply. Take for example, Tibet which has a totally different culture and language from the Chinese but still is an "inalienable" part of China.

Returning to the Mongolians, as their Empire fell apart, the many conquered lands that were under the various khanates began to break free and regain self-rule. The Tibetans regained their territory, the Manchus theirs, the Uighurs staked out areas for themselves. As the Han Chinese broke free, they did not return to the Song lands. They expanded. Some would say they "took back" territory that 450 years previous roughly fit the borders of the ancient Tang Dynasty (618--907) with the exception of the Tarim and Turfan Basins. Tibet of course was never a part of Tang China.

These new Chinese rulers called their reign the Ming Dynasty. As for the Yuan Dynasty Mongolians, they were never fully defeated like the Song Dynasty and they retreated to rule in the steppes from whence they had come. Though they still ruled there, as far as the Chinese historians were concerned, the Yuan Dynasty ended in 1368.

Tibet, Mongolia, the Uighur kingdom etc. were never under the Ming Emperors who reigned from 1368-1644. In the latter years of this reign the Manchus regrouped and began to build a new kingdom northeast of the Great Wall. They expanded into Inner Mongolia and then taking advantage of favorable Ming internal weakness and in-fighting, the Manchus got through the Shanhaiguan pass and started their conquest of Ming China.

After they conquered the Ming, they continued their conquest of the neighboring countries including Tibet, Mongolia and that of the Uighurs. They also occupied the island of Taiwan to prevent any Ming loyalists safe harbor there. Interestingly enough all of these conquered lands of Tibet, Mongolia, Taiwan, and China etc. now became a part of China and not Manchuria. The Manchus like the Mongolians did not have good spin

historians.

Like the Mongolians, the Manchus (not having the required manpower) kept the administrative structures of the countries they had conquered. Like the Mongolians of course, the top men were always Manchus. For the Han Chinese that they were under alien rule was not lost on them. They all had to shave their heads and wear the Manchu queue. Even now, many Chinese still smart at the "indignity" of any mention of that fact; it was a disruption of the order of the universe as they perceived it. Ironically when they in turn Sinicized lands that they conquered it was different. The Manchu queue requirement was an indignity; but required Sinicization was not. Perhaps someone should ask the Tibetans or other dispossessed subjects about this.

In the same way there are many Chinese who still cannot forgive or forget the humiliation of the Opium wars with England, even though at that time the English were "humiliating" the Manchu Empire and not China. But, of course in their historians' minds all the countries that the Manchus had conquered had now miraculously become China and not the Manchu Empire.

Throughout the long Manchu reign, the Chinese cry was "Down with the Qing and restore the Ming." There was however one catch. The Han Chinese wanted to restore the Han rule of the Ming, but they did not wish to restore the borders of the Ming. They preferred to keep the borders of the other countries that the Manchus had conquered, i.e. Tibet, Mongolia, Xinjiang and even Taiwan which the Qing had since given to the Japanese "in perpetuity."

The Tibetans had a slightly different phrase, they said "Down with the Qing, restore Tibet" but they did not get outside acknowledgement. Only the Mongolians were lucky in this regard; this was ironically due to their relationship with Russia (not the democratic West) who preferred a buffer between their long border with China. Outer Mongolia even got into the United Nations in 1961; Inner Mongolia was not as lucky.

Somewhere in all these discussions someone will also bring up the nomenclature of dependant "tributary states." This also has a variety of applications and interpretations. More often than not, it applies to bordering states wishing to keep peace on their borders and to facilitate trade with and gain access to the lucrative China market.

Not long ago, I read about how Henry Paulson, chief executive of Goldman Sachs recently worked out a lucrative deal with Chinese President Hu Jintao. Goldman Sachs was given much greater access than any other foreign investment bank to China's growing financial services market. In exchange for this access, Goldman Sachs made a US$67 million "donation or gift" to cover investor losses at a failed Chinese brokerage firm, and agreed to lend US$100 million to Fang Feng Lei, a Chinese banker who brokered the deal. US$167 million is no small change.

Now in some circles, the nomenclature of the above could be called "sweetening the pot," a "bribe" or even setting up a "well-executed kickback." In other circles it might be termed "business as usual," and probably as it was put to the board of Goldman Sachs it was "getting one leg

up on the competition." I often wonder however that in some future history book, an enterprising and loyal Han historian will point out how Henry Paulson of the kingdom of Goldman Sachs paid homage to and offered "tributary fealty" to the Chinese Emperor, I mean, President Hu Jintao.

A friend of mine once said, Taiwan is a part of China inasmuch as China is a part of Mongolia or of Manchuria for that matter. It is a matter of perspective or perhaps finding a more adequate paradigm.

Face it, a post colonial revisionist history that represents oppressed voices is still noticeably lacking and still remains in order. All of the above could be considered academic trivia if peoples' lives were not affected. Except for a few, most sinologists still don't want to touch this. They don't want to challenge, clarify or to talk openly about the perpetuation of out-dated nomenclature as regards China because first of all it is complex and secondly in the process they would probably endanger their research in the People's Republic of China. Fair enough, but then again, not so.

Decades ago, historians were able to separate their appreciation of Russian culture and their analysis and critique of Russian history. Sinologists still have not measured up in that regard.

What does this have to do with Otto's claim to the Holy Roman Empire? Well, whenever you hear someone talking about what "has always been a part of China," what is an "inalienable and/or inviolable" part of China, and/or what is "splittist" talk about the "internal affairs" of China, this is the first warning sign. Check to see what history books they have been reading, because what you are really witnessing is the cover up and justification for a simple, good old-fashioned "land grab," and a lot of people are being dispossessed.

Communist China, the People's Republic of China or PRC, never tires of denouncing Taiwan as a "renegade province" that belongs to it, and bitterly complaining that any attempt by any country anywhere in the world to treat Taiwan as a sovereign independent nation is a gross interference in China's "internal affairs."

This claim is about to be publicly exposed as baseless - for it turns out that as a matter of international law, Taiwan is legally an overseas possession of the United States of America.

Taiwan has been inhabited by a Malayo-Polynesian aboriginal people for 40,000 years. The Chinese never showed any interest in it nor attempted to colonize it all the way up to the end of the Ming Dynasty in 1644 AD. The Portuguese, the first European colonizers in Asia, made no attempt to do so either, although they named it Formosa (Beautiful).

It was the Dutch, who had begun colonizing Java and Sumatra and creating the Dutch East Indies (now Indonesia) in the early 1600s, that established a base there in 1624 and began to import Chinese men from Fujian across the Formosa Straits as laborers. A Chinese pirate named Koxinga took over the island in 1661, kicked out the Dutch and established a pirate kingdom.

In the meantime, over in China, a tribe of nomadic herders similar to the Mongols called the Manchus had conquered northeastern China, calling their kingdom Ching (or Qing), "Pure." In 1644, they overthrew the Ming Dynasty by seizing Beijing, with the last Ming Emperor, Chongzhen, hanging himself on a tree overlooking the Forbidden City.

The Manchus had to spend the next 17 years consolidating their control over all of China. After two subsequent decades of raids on their southern coast, they put an end to Koxinga's pirate kingdom and took over Taiwan in 1683. At the time there were about 7,000 Han (ethnic Chinese) on the island.

Some two hundred years later, in 1894, the Ching government of China got into a war with Japan over control of Korea, and lost. In the formal Treaty of Shimonoseki signed in April, 1985, the Chinese government formally recognized the independence of Korea, and legally ceded Taiwan to Japan. For the next 50 years, Taiwan under international law was the possession of Japan's.

The Japanese Government's control over Taiwan ceased on August 15, 1945 when it announced its surrender in World War II. The Instrument of Surrender was signed on the deck of the USS Missouri on September 2, which placed "all Japanese forces wherever situated" under the command of "the Supreme Commander of the Allied Powers," Gen. Douglas MacArthur.

That day, McArthur formed the United States Military Government (USMG) with jurisdiction over Japan, Korea, and Taiwan. General Order No. 1 of the USMG included the directive that all Japanese commanders and forces in Taiwan (called Formosa) "shall surrender to Generalissimo
Chiang Kai-shek," leader of the recognized legal government of China, the Republic of China (ROC). These forces then surrendered to ROC commander Chen Yi on October 25, 1945.

But the Instrument of Surrender was an armistice, not a formal peace treaty. Japan had not ceded Taiwan to the ROC. The legal authority in Taiwan remained the United States Military Government, which had delegated - delegated, not relinquished - the military occupation of Taiwan to the ROC.

This occupation conducted by Chen Yi proved impossibly corrupt and abusive, resulting in a rebellion by native Taiwanese known as the 228 Incident, as it began on February 28, 1947. Chen Yi's soldiers killed thousands of Taiwanese and instituted a tyranny called the "White Terror."

By now, Mao Tse-tung's Communists were waging full scale war against Chiang Kai-shek's ROC government. They succeeded in taking over China from April to November, 1949, during which the Generalissimo, several hundred thousand of his soldiers, and 2 million refugees crossed the
Formosa Strait to Taiwan. Chiang proclaimed that the city of Taipei was now the temporary capital of the Republic of China, the sole legitimate government of mainland China.

It may have been the legitimate capital of China, but not of Taiwan, because the ROC was not the legitimate government of Taiwan - the USMG was.

Japan did not sign a formal peace treaty until September 8, 1951. Known as the Treaty of San Francisco, Article 2(b) states:

"Japan renounces all right, title and claim to Formosa and the Pescadores" (islands in the Formosa Straits).

But - the gargantuan but -- no receiving country is specified in the treaty. In other words, Japan renounced its sovereignty over Taiwan, but did not turn over that sovereignty to either the PRC in Beijing or the ROC in Taiwan. Neither the PRC nor the ROC were invited to the San Francisco treaty conference, and neither was a signatory to the treaty.

This means that the USMG remained the sovereign legal authority in Taiwan. Article 4(b) of the treaty states this in recognizing the authority of "the United States Military Government in any of the areas referred to in Articles 2 and 3," as does Article 23(a) recognizing "the United States of America as the principal occupying Power."

This treaty is still in effect. In the opinion of a number of scholars of international law, Taiwan is neither a province of China over which the PRC has legitimate sovereignty, nor is Taiwan a sovereign state of itself. It is, rather, an overseas territory of the U.S.

The practical bottom line to this is that the Communist PRC government of China has no claim to Taiwan under international law.

Further, as Taiwan is a U.S. territorial possession, the United States government is legally obliged to defend it.

This can only be changed by the United States Congress. As the historical and legal facts described here sink in to Capitol Hill, expect a number of bills to be offered in the upcoming session that will either legally turn over sovereignty of Taiwan from the U.S. to the Taipei government, or make it legally explicit that China's claim on Taiwan is fraudulent.

2053. MYSTERIOUS INTERFERENCE IN THE SAN DIEGO AM BAND

Newsgroup: rec.radio.shortwave
Date: 2006-01-18 13:12:36 UTC
From: David <rickets@knac.com>
Message-ID: <2mfss1d516olafb4e7jsnfqup41tolg8ua@4ax.com>
Source record: 58653

MYSTERIOUS INTERFERENCE IN THE SAN DIEGO AM BAND

On Wednesday night, January 11, 2006, unidentified wideband interference blanketed the AM broadcast band in San Diego "with peaks all over the dial" according to one report. The interference was heard from 150 kHz to over 5 MHz and obliterated weak out-of-town AM broadcast signals. KNX was said to be 90% covered by static and noise. These observations were made along Highway 52.

A second report (this from an experienced broadcast engineer) noted RFI "from 540 kHz through 5 MHz [that] came on after 6 PM, 1/11, Wed evening. In the morning the hash was gone and [the] band was back to normal Thursday night.... The RFI could NOT be nulled out and was as strong OUTSIDE as inside a house. This is using battery portables with circuit breakers on the house pulled. Also noticed on several radios and driving in [a] car. Pretty widespread. So strong a slight hash was heard under KOGO."

We could be dealing with military interference, spurs from a powerful broadcast transmitter or some peculiar kind of in-power-line device or devices. The FCC has been notified.

2054. OT: China to become Iran's primary trade partner: Chinese envoy

Newsgroup: rec.radio.shortwave
Date: 2006-01-18 13:23:25 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11ssgbk6lh56e2e@corp.supernews.com>
Source record: 58655

The Chinese Ambassador to Tehran said here Monday that the trade between Iran and China exceeds dlrs 10 billion and China is to become Iran's primary trade partner in the near future.

Speaking at Iran, China economic gathering Lio G Tan said that Iran and China trade registered record high last year.

"China imported over dlrs one billion of non-oil goods from Iran in 2004 and the figure doubled in 2005."
China's imports of non-oil goods from Iran is among the highest of non-oil exports from Iran, he said.

Also, the two nations gained great achievement in signing agreement on new projects which totaled 38 last year, Tan said.

The two nations also achieved progress in developing their upstream and downstream industries in oil and gas sectors.

China hopes that the respective chambers of commerce will show the necessary coordination and companies will abide by agreement's regulations to improve products quality, Tan stated.

Banks should also observe international commercial conventions and the two customs should ease regulations on clearing of goods to facilitate bilateral trade, he added.

He said the mutual trade exchange could be boosted given the two nations' large markets and amicable political relations.

The outstanding problems in the two nations trade exchange pale significantly compared to their important commercial goals, the Chinese envoy underlined.

He said the Chinese embassy will do its part and be a bridge between the two sides to resolve their issues and improve bilateral trade.

The 13th Iran-China joint Economic, Scientific and Technical Commission will be held in Tehran. A Chinese product exhibition will also be held in Tehran in September.

He highlighted the importance of mutual cooperation in the energy, power, metallurgy, telecommunications,, shipbuilding, transportation and water sectors, saying 700,000 people are daily using the China-made subway network in Iran.

The ambassador said expansion of cooperation between Iran and Hong Kong will benefit both sides.

Lio put the value of direct exchanges between Iran and Hong Kong at dlrs 60 million to dlrs 170 million in a period starting from 2003.

He expressed dissatisfaction over dlrs 40 billion exchanges between Hong Kong and other states.

Concluding his remarks, Lio said abundant natural resources, big market, geographical location and educated workforce are among relative advantages of Iran, stressing expansion of mutual cooperation.

In related news, Iranian charge d'affaires in China, Farhad Asadi said here last week that talks are currently underway between Iran and independent states such as China on the prospect of purchasing aircraft to equip the country's air fleet.

In response to a question on whether Iran will use Chinese planes in its air fleet, he noted that Iran intends to procure its requirement from independent and friendly countries.

He added that talks are currently underway on the issue and that any kind of cooperation in this respect will be welcomed.

Concerning collaboration and mutual relations in 2006, Asadi said that the two states currently enjoy the most favorable ties and referred to China as Iran's best trade partner.

"Iran and China have potentials for long-term collaboration based on mutual confidence and safeguarding each other's interests.

"Bilateral agreements on cooperation in the oil and gas sector will result in several-billion-dollar revenue over the next 25 years.

Besides implementation of dozens of minor and major industrial projects in Iran by Chinese enterprises mark the significance of such relations in economic and trade fields," he added.

2055. Coax Suggestions ?

Hello:

Will be putting up an outdoor Listening-Only antenna. (30 MHz, on down)

After the outdoor Balun and Lightning Arrestor, it looks like I will need pretty close to
100 feet of coax to get it to the receiver.

Can anyone suggest what might be the lowest cost coax that will not exhibit any "meaningful" attenuation for listening only at around 30 MHz ?

I don't have a good feeling on how to evaluate the db losses for the individual types with regard to
what is, and is not, meaningful for listening.

Don't mind spending another 50 cents or so per foot, but would like to not do it
unless it would really offer an improvement.

Also, guess I would like the smallest diameter possible, but this, of course, would be a secondary consideration

Is the Wireman Company: considered a reputable, and good, source for ?
Others ?

Might as well also ask this while I'm at it:

re those metal mesh Kellums for supporting a wire- If placed over the active antenna wire (not the coax), is there any "shorted-turn" effect phenomenon to be considered ?.

Thanks,
B.

Radio Shack RG-58/U works great below 30 MHz and will match your other
stuff perfectly. It comes in 50' lengths with connectors attached.
Get a barrel for the middle. As long as you don't under-radius,
inductive effects can be disregarded.

You are so focused on finding ways to hate the CCCP that you are missing a very fundamental point. The point is that China is a country that is poised to perform an economic rebirth that is similar in many respects (if not scale) to that performed by Japan in the post WWII era. Both countries are recognized as having a long and rich history that produced stunningly beautiful art and created several contributions to worldwide culture. Both countries were not known for their ability to produce good quality consumer goods. We all know what Japan accomplished and a lot of that was accomplished by Japanese citizens working in some pretty dreadful conditions. China is already becoming a capable and reliable producer of consumer goods. That trend will continue. Because of it's sheer size China will become a producer of goods the size of which we have rarely seen before. It will dwarf Taiwan economically as it already dwarfs it in physical size.

It is important that you understand that the CCP is the political group in charge of China, but the CCP is not China. As China becomes more open I expect that the CCP will gradually evolve toward being more open and responsive to the many social problems that country still faces. That evolution will not be smooth or pretty but it is happening and will continue.

The economic relationship I would focus on would be China and India.
Teamed up in some sort of AU that would be a powerhouse.

If you can show me a line that I've written that is even slightly
"hate filled" or anti-christian I'd like to see it. It seems you're so
insecure in your beliefs that you view anyone hiolding a different
opnion as attacking you. (though I admit I have chided your
punctuation.)

>
>S... 'you' may wish to call 'yourself' a truthsayer

I'm just a regular guy who mostly trying to figure out what the hell
is going on in this country. As far as telling the truth, why not,
it's much less complicated.

but
>in-fact 'you' have a Political and Social Agenda and

we all have a point of view based on our beliefs and experiences.To
call it a "Social Agenda" is getting a little carried away.
If you think that the wrongful purging of voters is a "lie" read some
of what Palast wrote in the 6 months after the 2000 election and
critique the articles rather than attacking me. It won't take 10
minutes and you know he's an entetaining writer.

>it is to Publically {Openly} Attack : Republicans,

I live in an apartment in Hong Kong and believe I am in a similar situation as yours. My radio is a cheap, made-in-China Kaide.

I don't have an active antenna. Instead I simply put a 6 yard insulated wire (clipped to the radio's telescopic antenna) outside the room window and have it run horizontally to the balcony. Reception improves a lot. Certainly better than using the telescopic antenna alone. I am getting good SW reception from as far as Radio Australia. Broadcasts from transmitters in Singapore (BBC) and Guam (VOA) are clearly heard, too.

What I couldn't get is the broadcast from the (1) smaller transmitters of Radio New Zealand and Radio Singapore, etc, and (2) transmitters in Europe. However, the bands are so flooded with the Chinese (domestic?) SW broadcasts that I suppose these stations will simply be drowned out even with a good outdoor antenna.

My favorite part: "And as in the dark all Cats are grey"
Benjamin Franklin, Advice to a Young Man on the Choice of a Mistress (1745).

June 25, 1745

My dear Friend,

I know of no Medicine fit to diminish the violent natural Inclinations you mention; and if I did, I think I should not communicate it to you. Marriage is the proper Remedy. It is the most natural State of Man, and therefore the State in which you are most likely to find solid Happiness. Your Reasons against entering into it at present, appear to me not well-founded. The circumstantial Advantages you have in View by postponing it, are not only uncertain, but they are small in comparison with that of the Thing itself, the being married and settled. It is the Man and Woman united that make the compleat human Being. Separate, she wants his Force of Body and Strength of Reason; he, her Softness, Sensibility and acute Discernment. Together they are more likely to succeed in the World. A single Man has not nearly the Value he would have in that State of Union. He is an incomplete Animal. He resembles the odd Half of a Pair of Scissars. If you get a prudent healthy Wife, your Industry in your Profession, with her good Economy, will be a Fortune sufficient.

But if you will not take this Counsel, and persist in thinking a Commerce with the Sex inevitable, then I repeat my former Advice, that in all your Amours you should prefer old Women to young ones. You call this a Paradox, and demand my Reasons. They are these:

i. Because as they have more Knowledge of the World and their Minds are better stor'd with Observations, their Conversation is more improving and more lastingly agreable.

2. Because when Women cease to be handsome, they study to be good. To maintain their Influence over Men, they supply the Diminution of Beauty by an Augmentation of Utility. They learn to do a 1000 Services small and great, and are the most tender and useful of all Friends when you are sick. Thus they continue amiable. And hence there is hardly such a thing to be found as an old Woman who is not a good Woman.

3. Because there is no hazard of Children, which irregularly produc'd may be attended with much Inconvenience.

4. Because thro' more Experience, they are more prudent and discreet in conducting an Intrigue to prevent Suspicion. The Commerce with them is therefore safer with regard to your Reputation. And with regard to theirs, if the Affair should happen to be known, considerate People might be rather inclin'd to excuse an old Woman who would kindly take care of a young Man,

form his Manners by her good Counsels, and prevent his ruining his Health and Fortune among mercenary Prostitutes.

5. Because in every Animal that walks upright, the Deficiency of the Fluids that fill the Muscles appears first in the highest Part: The Face first grows lank and wrinkled; then the Neck; then the Breast and Arms; the lower Parts continuing to the last as plump as ever: So that covering all above with a Basket, and regarding2 only what is below the Girdle, it is impossible of two Women to know an old from a young one. And as in the dark all Cats are grey, the Pleasure of corporal Enjoyment with an old Woman is at least equal, and frequently superior, every Knack being by Practice capable of Improvement.

6. Because the Sin is less. The debauching a Virgin may be her Ruin, and make her for Life unhappy.

7. Because the Compunction is less. The having made a young Girl miserable may give you frequent bitter Reflections; none of which can attend the making an old Woman happy.

8thly and Lastly They are so grateful!!

Thus much for my Paradox. But still I advise you to marry directly; being sincerely Your affectionate Friend.

From Ben Franklin:

GENTLEMEN,

I have perused your late mathematical Prize Question, proposed in lieu of one in Natural Philosophy, for the ensuing year, viz. "Une figure quelconque donnee, on demande d'y inscrire le plus grand nombre de fois possible une autre figure plus-petite quelconque, qui est aussi donnee". I was glad to find by these following Words, "l'Acadeemie a jugee que cette deecouverte, en eetendant les bornes de nos connoissances, ne seroit pas sans UTILITE", that you esteem Utility an essential Point in your Enquiries, which has not always been the case with all Academies; and I conclude therefore that you have given this Question instead of a philosophical, or as the Learned express it, a physical one, because you could not at the time think of a physical one that promised greater Utility.

Permit me then humbly to propose one of that sort for your consideration, and through you, if you approve it, for the serious Enquiry of learned Physicians, Chemists, &c. of this enlightened Age. It is universally well known, That in digesting our common Food, there is created or produced in the Bowels of human Creatures, a great Quantity of Wind.

That the permitting this Air to escape and mix with the Atmosphere, is usually offensive to the Company, from the fetid Smell that accompanies it.

That all well-bred People therefore, to avoid giving such Offence, forcibly restrain the Efforts of Nature to discharge that Wind.

That so retained contrary to Nature, it not only gives frequently great present Pain, but occasions future Diseases, such as habitual Cholics, Ruptures, Tympanies, &c. often destructive of the Constitution, & sometimes of Life itself.

Were it not for the odiously offensive Smell accompanying such Escapes, polite People would probably be under no more Restraint in discharging such Wind in Company, than they are in spitting, or in blowing their Noses.

My Prize Question therefore should be, To discover some Drug wholesome & not disagreeable, to be mixed with our common Food, or Sauces, that shall render the natural Discharges of Wind from our Bodies, not only inoffensive, but agreeable as Perfumes.

That this is not a chimerical Project, and altogether impossible, may appear from these Considerations. That we already have some Knowledge of Means capable of Varying that Smell. He that dines on stale Flesh, especially with much Addition of Onions, shall be able to afford a Stink that no Company can tolerate; while he that has lived for some Time on Vegetables only, shall

have that Breath so pure as to be insensible to the most delicate Noses; and if he can manage so as to avoid the Report, he may any where give Vent to his Griefs, unnoticed. But as there are many to whom an entire Vegetable Diet would be inconvenient, and as a little Quick-Lime thrown into a Jakes will correct the amazing Quantity of fetid Air arising from the vast Mass of putrid Matter contained in such Places, and render it rather pleasing to the Smell, who knows but that a little Powder of Lime (or some other thing equivalent) taken in our Food, or perhaps a Glass of Limewater drank at Dinner, may have the same Effect on the Air produced in and issuing from our Bowels? This is worth the Experiment. Certain it is also that we have the Power of changing by slight Means the Smell of another Discharge, that of our Water. A few Stems of Asparagus eaten, shall give our Urine a disagreeable Odor; and a Pill of Turpentine no bigger than a Pea, shall bestow on it the pleasing Smell of Violets. And why should it be thought more impossible in Nature, to find Means of making a Perfume of our Wind than of our Water?

For the Encouragement of this Enquiry, (from the immortal Honor to be reasonably expected by the Inventor) let it be considered of how small Importance to Mankind, or to how small a Part of Mankind have been useful those Discoveries in Science that have heretofore made Philosophers famous. Are there twenty Men in Europe at this Day, the happier, or even the easier, for any Knowledge they have picked out of Aristotle? What Comfort can the Vortices of Descartes give to a Man who has Whirlwinds in his Bowels! The Knowledge of Newton's mutual Attraction of the Particles of Matter, can it afford Ease to him who is racked by their mutual Repulsion, and the cruel Distensions it occasions? The Pleasure arising to a few Philosophers, from seeing, a few Times in their Life, the Threads of Light untwisted, and separated by the Newtonian Prism into seven Colors, can it be compared with the Ease and Comfort every Man living might feel seven times a Day, by discharging freely the Wind from his Bowels? Especially if it be converted into a Perfume: For the Pleasures of one Sense being little inferior to those of another, instead of pleasing the Sight he might delight the Smell of those about him, & make Numbers happy, which to a benevolent Mind must afford infinite Satisfaction. The generous Soul, who now endeavors to find out whether the Friends he entertains like best Claret or Burgundy, Champagne or Madeira, would then enquire also whether they chose Musk or Lilly, Rose or Bergamot, and provide accordingly. And surely such a Liberty of Expressing one's Scent-iments, and pleasing one another, is of infinitely more Importance to human Happiness than that Liberty of the Press, or of abusing one another, which the English are so ready to fight & die for. -- In short, this Invention, if completed, would be, as Bacon expresses it, bringing Philosophy home to Mens Business and Bosoms. And I cannot but conclude, that in Comparison therewith, for universal and continual UTILITY, the Science of the Philosophers above-mentioned, even with the Addition, Gentlemen, of your "Figure quelconque" and the Figures inscribed in it, are, all together, scarcely worth a
FART-HING.

Is there any freq where unlicensed operators can play with cw? I
somewhat remember some frequencies that were setup for this? Also
if you know this where would one start looking for the basic transmitter
setup, antenna, etc.

Thanks!

I'd bet one of the local Teslamaniacs has fired up one of their toys.
A Tesla coil with a spark gap, or a home made arc furnace.

Sound like the crap my neighbor's lights put out, though. (A low voltage
halogen system on a dimmer, I think). The hash is S9 on 41 meters.
BPL doesn't stand a chance.

It's ridiculous and biased. Penn and Teller are full of as much or more BS than PETA. Their take is slanted, sound bytes snipped and chopped, their retorts chosen for maximum impact. They call out assumptions and innuendo as fact. They don't make a single point in which they haven't left out a crucial piece of information.

For example - P&T talk early on about the big freezer for storage of euthanized animals that PETA rescued. Oh, same on PETA! Killing animals! What they don't tell you is that the vast majority of animal PETA has rescued have been abused and vivisected to the point where they are at the edge of death anyway, and the most compassionate thing one can do for them is to remove their misery through a gentle death (which is easily carried out)...just as you'd do for own beloved pet who has been ravaged by cancer or has had his pelvis and abdomen crushed irreparably by a car's tire. There are plenty of other examples.

That idiotic chicken - holocaust thing they bring up is largely a matter of PR. The name is irrelevant. No matter what it is called, billions of chickens are brutalized endlessly so that humans can unneccesarily eat them. There is nothing remotely ethical or moral about it.

While I agree that PETA goes a bit too far in certain things (No pets? No guide dogs for the blind?) there is nothing in this piece that gives me the slightest pause in asserting that PETA does *tons* of good for animals. I will continue to not eat meat, I will continue to look for alternatives to animal products, and I will continue to support PETA. You may do what you believe in your heart is right, and I will do likewise.

>unless it would really offer an improvement.

What matters is not the absolute level of the signal, but the ratio
between the local noise you don't want and the signal you do want.
Most tabletop receivers have so much gain that you won't notice.

Unless installation is too difficult or expensive, I'd go with the
cheaper stuff. Unless you go for Triax, like one of the regulars here
did, you'll probably find that there won't be than great an improvement
between cheap coax and "quad shield". After all, the antenna will be
picking up, to some degree, the same noise so there's a cap on how much
improvement you can get.

I just bought 135 feet of .19$ an foot foil shield RG/6 at the Orange
Monster (Home Depot). Comparing the new antenna (coax and balun) with a
similar length of wire direct to my R1000's high impedance connection,
the new antenna is within 3 S units at worst and gives higher readings
on some bands. But the noise (new remodel next door's light dimmers,
mostly) is about 5 S units lower.

Before I obtain a licenses for shortwave by cw examen we had some exercise
QSO's by using a novice license from an OM from our club.
Some years ago they do some Morse code exercises by modulate a free band
radio for short distance.

You may be thinking of the Novice license. That license was pretty easy to get (20 easy multiple choice questions, and a 5 WPM code test). It enabled you to get on the air with limited privileges to get experience and improve your code speed. Many hams entered the ranks as Novices. Alas, it is no more.

I'm using a RF Ststems EMF Antenna (purchased about 4 ywars ago fron Universal). I live om the first floor of a 3 story apartment building. and use it with all my receivers
Yhe building id brick . I mounted it along the ceilingalong an outside wall that is appeoximately North/ South It is about 11 feet from the ground outside including the foundation. I've been an SWL fornearly 50 years and have been living here nearly 13 years. The antenna is very low noise and is passive (not amplified). I've tried numerous antenna (both commercial and home brewed and this is as close toa decent outdoor antenna that I've found. I do a lot of utility monitoring includin HF Fax and have copied and decoded over 100 countries . These are all lowerpowered then Intl Broacasters). It is important to run a good groun to the receivers (even a cold water pipe woks well here. My receivers are on the same table as my computer, I read in an older post here where someone made an EMF type antenna, but I'm not sure how well it
did.

Hope this helps.

Doctors without borders -> "medecins sans frontiers"
(http://www.msf.org/), located in Geneva.

Reporters Without Borders -> "Reporters sans frontiers"
(http://www.rsf.org/), located in Paris.

Two different organisations, even located in two different countries.

Cheerio! Kr. Bonne.

The Democrats are out of power, so what can they do? The only good thing about being out of power is each and every fuck up by the GOP is the fault of the GOP. The DEMS have no subpoena power. Hell, they don't even get on the house/senate conference committee under GOP rules, so they don't get to cut the budget pork. Remember, the money for the Ted Steven's bridge to nowhere is still allocated for Alaska, just not for that particular bridge.

Remember this Ted Steven's pork project, a $500k paint job:

I once read where those peta freaks killed some dogs and then they threw the dogs in a dumpster.Look it up.A few years ago,two of those peta freaks wimmins came to Jackson,at the intersection of Highway 80 and Highway 18,just up the hill from me,about one block,Metrocenter Mall www.metromalljackson.com is right there in that area.I was listening all about it on the local Jackson JT and Dave radio talk show on Superalk Mississippi FM 97.3 on my radio.One of those peta freaks wimmin (her peta freak "girlfriend" stayed in that big old car they were "living in") The peta freak woman was standing right there on the corner,she had absolutely nothing on her but her panties and her shoes and she was holding up a big peta freak sign across her bare breast.Somebody called the cops and the cops came and put them in jail.They bailed out of jail and they went to Mobile,Alabama.Two or three years after that,the same thing happened again and they bailed out of jail again here in Jackson and they hit the road and went to either Biloxi or Gulfport,Mississippi.I didn't bother to get off of my couch and walk up the hill to look at them peta freaks wimmins when they came to Jackson and I am glad I didn't either.JT and Dave said they sure were Ugly!

The answer is no. But you might try this: Get a code practice
oscillator and key. Set it up by the microphone for a CB or Family
Radio. Hold the mike button down, and then operate your code practice
oscillator. Another person with a similar setup can answer in a like
manner.

I've heard his done on the 2 meter amateur band, for Technicians
practicing the code to upgrade to the General class license. Shouldn't
be a problem for other radio services, (but you never know :-).

Those precision diode circuits look good on paper, but you can do a
better circuit by using a comparator to select between the inverted and
non-inverted signal (generated by op amps). That is how you do the
function on an IC, where floating diodes are a problem.

It was good to post it. There are many schemes to do demod. The HP 334
distortion analyzer, when used in AM mode, uses a simple diode detector
scheme. I think it can do about 0.25% THD, but need to dig out the
manual to be sure.

I've used DavisRF and also bought coax locally.
http://www.davisrf.com/ham1/coax.htm
has an attenuation table. At 100ft, maybe you lose 3dB at 30Mhz with
the RG58.

I'm not as concerned about loss as much as will the cable hold up
outdoors, and the quality of the shielding.

There are attenuation charts on the net.

RG-6QS quad shielded satellite dish coax. The shielding is better than most small diameter 50-ohm coax. The impedance of RG-6 is 75-ohm but that's not an issue for HF reception. Radio Shack sells a 100-ft roll for $35.

PeTA lost any respect I had for their cause when they were discovered to
have been 'rescueing' animals from the Humane Society and 'euthanizing' them
before ever leaving the parking lot. Some of those animals were destined to
go to loving homes.

Check http://www.davidgleason.com/Argentina%20Radio%2010%20Transmitter.htm
for shots of the skirt we put on Radio 10, a 100 kw AM on 710 in Buenos
Aires. In addition, the station intentionally directionalized to send a
bigger signal over Buenos Aires by putting a 1/4 wave passive tower to the
NE of the main half wave tower. The effect was to increase the field over
downtown (mostly apartments, like New York) and to become the only
listenable AM in the market inside major clusters of buildings.

The skirt seems to have given good bandwidth, and sounded very nice.

Yes, I'm using a 240 VAC source which matches the AC power outlet in
Singapore.

> Second Question - Right Adapter Plug SIze :
> Make sure that you are using the Biggest Size "OD" Adapter

Yes, according to the radio manual, the radio has an inbuilt switch
which disconnects the batteries when external DC power is used. In
fact, when I connected the AC-DC adaptor to my radio which is operating
on batteries, the LCD display goes blank.

> Third Question - Batteries Getting Hotter :

Hard packed dirt, especially moist dirt, with plant life heats more slowly
than desert sand and releases its heat more quickly, regardless of any
comparison of either to water.

I recall that this was somehow a bogus reason to reject them, that there
was a simple and perfectly valid reason the ballots would not have postmarks.

> When the repubs objected, these ballots were rightfully counted, along

Where was he when Clinton was doing far worse? Clinton spied on Americans IN America; Bush is spying only on communications to or from overseas.

As for warrantless searches:

[Federal Register page and date: 60 FR 8169; February 13, 1995]

THE WHITE HOUSE

Office of the Press Secretary

For Immediate Release February 9, 1995

EXECUTIVE ORDER 12949

- - - - - - -
FOREIGN INTELLIGENCE PHYSICAL SEARCHES

By the authority vested in me as President by the Constitution and the laws of the United States, including sections 302 and 303 of the Foreign Intelligence Surveillance Act of 1978 ("Act") (50 U.S.C. 1801, et seq.), as amended by Public Law 103- 359, and in order to provide for the authorization of physical searches for foreign intelligence purposes as set forth in the Act, it is hereby ordered as follows:

Section 1. Pursuant to section 302(a)(1) of the Act, the Attorney General is authorized to approve physical searches, without a court order, to acquire foreign intelligence information for periods of up to one year, if the Attorney General makes the certifications required by that section.

Sec. 2. Pursuant to section 302(b) of the Act, the Attorney General is authorized to approve applications to the Foreign Intelligence Surveillance Court under section 303 of the Act to obtain orders for physical searches for the purpose of collecting foreign intelligence information.

Sec. 3. Pursuant to section 303(a)(7) of the Act, the following officials, each of whom is employed in the area of national security or defense, is designated to make the certifications required by section 303(a)(7) of the Act in support of applications to conduct physical searches:

(a) Secretary of State;

(b) Secretary of Defense;

(c) Director of Central Intelligence;

(d) Director of the Federal Bureau of
Investigation;

(e) Deputy Secretary of State;

(f) Deputy Secretary of Defense; and

(g) Deputy Director of Central Intelligence.

None of the above officials, nor anyone officially acting in that capacity, may exercise the authority to make the above certifications, unless that official has been appointed by the President, by and with the advice and consent of the Senate.

WILLIAM J. CLINTON

THE WHITE HOUSE,
February 9, 1995.

Politics seems to attract the dregs of humanity. When I was a kid, I saw John F.Kennedy as noble and the pinnacle of decency. His image was tarnished when all those rumours and stories about his escapades surfaced later. A whole bunch of miscreants seemed to follow. Remember Spiro? Nixon? Even LBJ was tainted with Texas oil money. Lots more of these types. They make Billy Sol Estes look good.

I don't think the world and it's corruptions have actually changed much in the last forty years. My perception and understanding of how the rot affects public servants sure has.

I feel the arrogance of public servants continues to increase. We DON'T need leaders. We need LISTENERS.

RHF...

Awesome post!

On the JRC reception, the radio is only part of the equation. Your antenna is a bigger part of the equation. The best radio in the world won't make up for a poor antenna. It's easy to buy a nice radio but it takes some research and work to put up a nice antenna. One of the nice things about shortwave radio is that someone can buy a $100 portable and put up a nice antenna and do very well. Try playing around with some different antenna ideas. RHF's post is an excellent place to start. It sounds like you have some room to work with. Good luck!

Just stumbled upon this frequency tonight. It's quite strong from here (S-7 from Louisville, KY). I don't see it listed in NOAA's fax schedule though and the most recent update availabe online is October of '05. When I tuned this in, it was putting up the Atlantic surface analysis maps which could mean that this is a new frequency for either NMF in Boston or NMG in New Orleans. Any thoughts about this out there?

I used to have a similar problem with my Kaide world band radio. Once I connected the AC adaptor plug to it, it stopped working even when there was battery inside. LCD display went blank, too.

Turned out the cause of the problem was that the plug didn't perfectly fit the socket on the radio although it appeared to fit. I twisted the plug and pull it out a bit. The radio then worked intermittently. It therefore was a problem of poor contact.

I then used another plug that finally proved to fit perfectly. No more problem.

BPL is a nightmare for me. When I first heard about it, I thought it
was a great idea that would help my remote-location parents get
high-speed Internet access. Then last year I became a shortwave
listener and learned how BPL can interfere. I doubt there will be any
legitimate support for notch-filtering BPL bandwidth just so I can use
my sub-$100 radio for entertainment purposes. The powerful providers
(sorry for the pun) will complain that they can't provide the best
possible service to their customers.

That adam or you can always get a short amount of speaker wire such as 18 Gauge speaker wire and then use anywhere from 10 to 30 feet. Just watch out for overload caused by too much wire. You can connect to the antenna with an alligator clip or you can plug it into the side jack for the antenna.

Adam,
I second SB's suggestion. As to how to hook it to the radio - wrap
the wire around the whip antenna (which does not need to be extended)
5 - 10 times - this is called inductive coupling and the wire does
not need to be tight on the whip.

Hi,

Thanks for suggestions.

Might you elaborate, please, a little on what you mean by installing a
barrel connector in the middle ?

It comes in 50' lengths with connectors attached.
Get a barrel for the middle. As long as you don't under-radius,
inductive effects can be disregarded.

Thanks,
bob

If you are wayyyy out somewhere and it's hard to get broadband internet access,I reccomend Starband.It isn't cheap,but I understand it works.
www.starband.com
Actually,I have been thinking about getting on Starband for my computer meself.There are one or two Starband installers/dealers here in the Jackson,Mississippi area if you want to put my zip code (39209) in the Starband search window thingy.However,yesterday,Bell South installed a new cable (big brand new cable,about two or more inches diameter) on my street.Last night,I stepped next door and I told the 37 year old blonde Bell South woman (she is a technician and she works with Bell South computers all day long,she is a pretty sharp cookie too) about it.She said she thinks they are getting this neigborhood ready for Bell South DSL.I asked her if that includes fiber optic.She said,Yeah,I think so,but I will ask.
I do want fiber optic for my computer.

how you vegitarians always seem to think the worst of us carnivore. You

really should get out more.
--

Regards
B.H. <

I have lived with "carnivores" all my life. I was one for many years.
I appreciate your allowance that abuse is immoral - that is a mark of
decency and compassion that is all too rare.

The problem is that most carnivores are unaware of how much animals
suffer for their food. It isn't just a matter of going out into a
field, finding a happy contented cow or pig, and quickly and painlessly
killing it. It isn't just walking out to the happy chicken's nest and
grabbin a few eggs while she's out scratching for food on the lawn.
Factory farms and feedlots that produce the food you eat abuse the hell
out of animals every day. The simple act of eating an animal may or
may not be immoral - that's only the superficial issue - but the
production of the food clealry constitutes abuse of animals, and by
your own admission, that is supporting an immoral industry every time
you take a bite.

Maybe you really should get out more ;-).

I admit, this is a problem.

It's too bad that one weird (and I'll bet unsupported) act would
totally harden you to a group that has otherwise accomplished a lot of
good. It sounds to me like some half-cocked individuals under PETA's
banner performed this act, and it is highly irregular, but so far I
have been unable to find a reputable source of information. I wil keep
looking.

Actually I have repaired and built machinery in rendering and processing
plant's all over the world. The Co. I work for now builds mobile equipment
that sucks the blood right out of bovine and super chills the meat in a
shorter period of time than traditional methods. I agree that large
processing of animals is gruesome to say the least but to efficiently feed
the word, that's the way it has to be. Not for the faint of heart. If I were
you I would stay away from that sort of thing.

y'all handled that one pretty well.If you want to use the antenna jack on your radio,get a short little piece of something like a piece of thick lamp cord bare wire.Twist it around so it will be a snug fit and put an alligator clip on your long antenna wire and clip on to that.

y'all ever heard of Alligator Bill and Potlicker Mary and Tubby Doug before? (I didn't think so) Jesse Bowland (Sunbeam Bakery relay store that used to be on Valley Street here in Jackson,Mee see see pee pee eye,I used to drive a bread truck) used to flirt with Tubby Doug's wife.

All it is is just a piece of wire in a fancy case. Why spend $20? when any wire will work Adam. Get some wire at radio shack and a alligator clip and hook it to your telescoping ant on your radio.

I've wondered how a vegan or vegeterian could possible consider taking
something like an antibiotic...imagine those bacteria just screaming
their little heads off as the penicillin approaches!!

And of course plants do respond to heat and light, so how could one
just summarily rip the tops off a bunch of carrots without feeling a
good deal of remose.

The best way to efficiently feed the world is to quit wasting precious vegetable matter and ag land on cattle feed and use it to feed humans. The wasted protein alone in going from plant to meat-based food is almost 90%. In other words, you could feed about ten humans on the volume of plant material that could be grown to make enough cow/pig meat to feed one human. Meat is, in itself, inefficient, and a luxury.

I'm looking for a recommendation for an external antenna to use with my Yaesu VX-7R handheld.

This antenna would spend most of its life on a bicycle (on a rear rack behind the seat), which is how I commute to/from work. However, I'd like to be able to use it occasionally on a car/truck so I'm thinking a magnetic base would be the most flexible.

Ideally it would cover all of the VX-7R's bands, or at least the 6M/2M/70CM bands and it would have a cable with an SMA connector at the end.

Ideally it would be something like Diamond's CR627B antenna (http://www.rfparts.com/diamond/cr627b.html) but without needing a triplexor and with a magnet mount.

Now I realize that such a thing might not exist which is why I'm open to suggestions that I drop the 6M band requirement which would lose me the grounding requirement which would lose me the restriction against magnet mount.

Ideas?

greg

Here is how it happened in the begining,millions of years ago.First,the animals was killing and eating animals.(at least they knew their food was fresh) Then,humans started moving in and eating the raw meat of what the animals left after the animals had gorged themselves.Then,us human animals discovered salt and fire makes the meat taste better.Originally,all humans (us human animals,we are all animals) were hunter gatheres.It's a d..n wonder us human animals ever survived at all!

Yeah, but the IBOC off the same antenna idea is the closest I can come up with for an explanation for the times in which WSCR and WBBM were alternating IBOC broadcasts. The fact that WBBM is no longer broadcasting IBOC sidebands suggests CBS has an experimental interest in IBOC rather than a fully committed interest in The Radio of Tomorrow.

I sure wish I'd grabbed a portable and checked the directions in which the broadcasts from WBBM, WSCR and their IBOC sidebands nulled out.

Speaking of nulls, there's one obvious problem with having a significant distance between the analog broadcast antenna and the IBOC antenna. Some IBOC radio owners would end up in areas in which the analog and broadcast antennas are at right angles to each other. The IBOC sidebands might get nulled out, and the High Defination Radio listener would get stuck with the Lo-Fi'd downgraded IBOC-analog channel.

So, maybe they were not IBOCing the same tower. But I think it's possible CBS could consolidate both broadcasters to the same site eventually. Save on engineering costs, make a few bucks off the surplus real estate and reduce the tax burden.

But I don't know. I do like to speculate.

Thanks for the pointer. Over Christmas I talked about satellite
internet service with my parents, but they are concerned about price.
Right now they have dialup for cheap, and want to upgrade to better
service. But I don't think they could justify the equipment cost based
on how much they would use it.

More PETAphile fun. And in 27F weather no less. Got to give her creds for that.

A scantily clad activist for People for the Ethical Treatment of Animals (PETA) was arrested Wednesday afternoon in downtown Minneapolis while protesting outside the Minnesota Pork Congress.
Michelle Y. Cho, 24, of Los Angeles labeled her exposed body parts to represent cuts of meat and sat below a banner reading, "All Animals Have the Same Parts. Go Vegetarian," at the corner of Nicollet Avenue and S. 7th Street. Cho said she was wearing a bikini bottom and pasties and held a sign covering her front torso. She was arrested on an accusation of indecent conduct about 15 minutes into the noon demonstration and was released on bail early this evening.

>setup, antenna, etc.

There are CW operations for Lowfers and Midfers. Mostly these
are beacons, but somewhere they may have two way conversations.
(Google for "Long Wave Club of America").

These are license free bands for relatively low power. Under the US
regulations you can run 1 watt (input power) with 15 meters (50 feet)
of antenna/ground system in the band for 160-190 kHz. Midfers get to
run 100 milliwatts of input power into 3 meters of antenna/ground on
the AM broadcast band 535?-1705 kHz.

So your saying the slightly under 6000$ radio from ten tec covers almost exactly the same thing as the new icom that costs around 400 $?

No thanks....I already gotta pair of RX-340's and they aint much of a radio...my old PCR-1000 will keep up with em all the way...matter of fact my old grundig yb-400 will outdo em at times LOL!

The radios filters may be a little wide. Listening carefully you can
move a frequency step in both directions and come to a consensus as to
whether WWV appears to be centered on 10 and 15 MHz by listening to how
the station sounds. The audio frequency response will change as you move
away to the actual transmitted frequency.

If the radio has 1 KHz increments you should be able to get an idea of
where WWV is centered on the right frequency. You might be able to do it
with 5 KHz increments.

> The skirt seems to have given good bandwidth, and sounded very nice.

Nice installation with near ideal earthing environment.

Good example of making the towers cross sectional area electrically
larger.

One reason the received audio is good is that besides being a well
engineered facility is the broader frequency response of the antenna
does not limit or phase distort the audio sidebands.

It must be very satisfying to build the matching device in the dog
house. You really have to pay attention to the physics of the capacitors
and inductors that makeup that device when it has to pass 100Kw.

Hi all,

Every once in a while I hear "Radio Sierra Papa", on 6925 kHz
following a pirate broadcast, announcing suggested 2-way pirate/outlaw
HF comms. on: 13.555 MHz USB, 6.670 MHz LSB, and 3.475 MHz LSB.

I've actually gotten on the 6 MHz frequency and once had a nice
contact with another station who heard the same announcements. Has
anyone else tried to make contact with any stations on those
frequencies? I've been unable to raise anyone on the 3 MHz frequency,
and also on the 13 MHz freq. I have heard some rather strange signals
on 13.555, though, during the daytime. Some of them sound like
beacons or something. And the other day there was this Spanish
speaking man broadcasting on AM (the signal was FM'ing something
awful) on 13.555.

Just curious if anyone else has tried to contact fellow radio nuts
(like me) on any of those freqs... perhaps weekends are the best time
for finding activity? Someone said the 3 and 6 MHz freqs. are known
as "Charlie Echo" calling channels in EU. Similar to outbanding
CB'ers or something. Interesting.

Regards,

"Starsky"

Listening U.S.A. daytime: 13.555 MHz USB
Listening U.S.A. evenings: 6.670 MHz LSB
Listening U.S.A. nights: 3.475 MHz LSB
All above monitoring subject to propagation variations.
(And when I'm not elsewhere in the HF spectrum doing
other things. .... ..)

I owned one of the first R8's and I don't recall it loosing lock on
signal fades as being a problem.

One annoying thing I do remember it doing was when the transmitter would
momentarily switch off altogether and then back on (example BBC) the
lock time and resulting whine would last many seconds due to the
reacquiring lock time of the sync detector. Switching the sync off then
on would often cause the radio re-lock more quickly (immediately) than
waiting for it to do it on its own. Very annoying when you are not right
in front of the radio to switch the sync off then back on.

Welcome to the often mysterious world of SW receiving antennas.

You will have to pay close attention as to whether you are in fact
receiving nothing or a high background noise level due to local
electronic noise sources. Signal levels can be a relative thing as that
to receive a station it has to overcome two things:

1. It has to greater than your radios internal noise floor for you to
hear it.

2. It has to overcome any local noise generated in the area.

This is not perfect because even the collapsed antenna will pick up
some signal noise but that said...

With the antenna collapsed and your hands away from it you should be
able to turn up the volume most of the way when you are not tuned to a
station and hear a random broad spectrum noise usually described as
hiss or white noise. This is the radios internal noise.

Then extend the antenna all the way in a vertical position and the
white noise level should only go up a little. It will go up more on the
lower bands and less on the upper bands. The increase if any is the
external noise.

Now if the difference in background noise is large between collapsed
and extended antenna then you have a local noise problem and you should
try another location where outdoors is usually better. If the
difference in the background noise is small then you can try connecting
an external antenna.

Easiest thing to do is to string about 10 to 25 feet of wire off the
ground then vertically to the radio antenna wrapping the wire about 10
turns around the base of the collapsed antenna base. If this pulls in
more signal for you (it should) then you could also explore the antenna
jack on the radio if it has one. Find the proper plug that goes in the
jack, most likely a 1/8 phono jack, and solder the wire to the plug
tip.

If the external antenna however connected to the radio makes a large difference in the in the background noise be aware that any possibly increase in the signal will have to overcome it. Good reception requires a significant difference between the received noise and the signal you want to listen too. Sometimes that may mean the radio might work better by itself and other times better with an external antenna. This relative difference will change depending on whether you string it near a local noise source such as a computer.

Using the radios whip antenna is convenient and the extended external wire is just an extension of that whip. If this is not working well enough for what you want to receive then you need a better type of antenna possibly in a better location.

Around 6955 or 6940 khz is an excellent place to catch the pirate radio broadcasters. Usually they transmit in LSB or USB but generally the evenings are a great time to catch them. Then and especially during the weekends. I recall there used to be some pirate traffic a lot in the six Mhz band between the 49 and 41 meter bands. But a lot of that was in the caribbean and south america. I can't recall hearing a lot of Europirates over here in the States. Most of them hang out in the 6.2 to 6.4 Mhz spectrum.

A bad week for the Democratic party with Hillary's Republican Senate plantation comments, Ray Nagin's chocolate New Orleans and Kennedy's dropping his membership to a racist mens club following the Senate confirmation hearings and now a Reid apology for smearing fellow Republicans in the Senate not to mention Al Gore publicly berating Bush for conducting the same signals surveillance that his administration conducted. After the incredible comments Belafonte has made Hillary is willing to attend a political event with him?

What a bunch of racist, smearing hypocrites they have turned out to be.

What in God's good name are several (most) of the Democrats on the Senate judiciary committee thinking when they state that Alito is qualified as a supreme court justice but they won't vote for him anyway? Don't they realize what this makes them look like?

I heard about the majority of the embarrassments listed above on short wave before I heard it in the USA media by the way. Yeah the world is watching us and we are the best political entertainment on the globe.

The Democrat party just keeps on giving one embarrassment after another. You would think that all most people would need to forever write that party off is to hear a Dean scream as a finishing touch on this weeks political news. Rah, rah, rah, go Demo's go.

TONIGHT @ 0300 UTC
The History Channel
Tiananmen Square - Declassified
Premieres: Thursday, January 19 @ 10pm EST & 2am EST

It started out as China's answer to Woodstock, but it ended like Kent State. Here, using unseen footage and declassified diplomatic sources, we present a previously shrouded story of the battles and deaths of hundreds of young Chinese students in June 1989--martyrs for democracy at Tiananmen Square--and the imprisonment of many others. Watch the birth and death of a movement, and learn how the demonstrators changed China forever.

The only evolution occuring in China is the Communist Party experiment in
Socialism with "Chinese characteristics" corrupted by Chinese mafia
experimenting in Capitalism.

well...when you combined 'juicy steak' and 'dirty underwear' in the same
sentence, I naturally assumed you ran across said garment during dinner.

I've never really wondered how hardcore vegetarians taste...heck they
sure don't sound very tender.

Now, I'm not condemning the dietary habit of folks down Texas
way..shucks, we all have to eat.

These fine folks have made an art of it:
==========
Special observances of this sort may extend to the very processes of
eating: witness not only the Polynesian custom of reserving certain
utensils for the eating of human flesh, but also the rigid formality of
our table etiquette in the proper use of knives, forks, and spoons . . . .
.http://www.biblehistory.com/16.htm

==========

I feel cuisine should be untainted by segregation and discrimination. I mean, we're ALL pink under the skin..well..only if served RARE, I suppose, but that isn't my point.

Race, religion, gender, age or political persuasion should make no difference in the cooking pots of the nation. We are all equal servings in the eyes of the Creator.

mike

Yes, I know it is a lot easier for you if you can ignore the change
that has and will continue to occur in China. That way you can
continue justify your lonely war to keep Taiwan from the clutches of
mainland China.

Hey Starsky.

What kind of stuff are you hearing on these three new frequencies? Is
it just ham like chit chat, or another pirate broadcast or what? Maybe
fellow pirates talking with each other???

Well. tried all above tonight..still nothing. Like I said AM (from Montreal to Ohio) & FM work great but I'm getting nothing on SW. Will return the radio for another one. THanks for the pointers and help everyone. I'll let you know what happens with the replacement. I'm surprised I can get the AM & FM but not SW... oh well - back to the factory. THanks again for all the pointers, very helpful.

It must be a subliminal thing.

I've just finished reading that Ringo Starr had once sent a letter to a Texas Chamber of Commerce, wanting advice on immigration. He liked country music. Later, the complicated immigration forms made him change his mind.

It was completely redesigned. The original was a double sided sync detector and was used on the R8, the R8A and the older SW8. Drake came out with an excellent sideband selectable sync detector circuit that debuted first on the newer SW8 (1996) and then on the R8B and the SW2 (as I recall). It's also used on the Sat800 (which is, after all, a repackaged SW8).

Check out http://www.hamcontact.com/handheldantennas.html for some ideas. I am using a Comet 35 inch (I think) antenna and it does extremely well on my VX5R and my VX2R. I would go this route instead.

It's a good antenna if you are moving the radio from place to place such as traveling. If it's going to be used at home all the time, a piece of wire strung up in the house attic (if you have one) will be far better. I would also recommend spending the extra dollar for the antenna plug and a $7 el cheapo soldering iron from radio shack to get it working. Also look up "180 feet 20 AWG wire $5.99 Catalog #: 278-1225 " on the RS website. You could have a good antenna setup for the price of the Sangean antenna. My first decent antenna setup was the one I just mentioned. It really did well. If you have some decent size space outside to put up an antenna, the world is your oyster.
180-Ft. UL Recognized Hookup Wire 20AWG
Model: 278-1225 | Catalog #: 278-1225

Three 60-ft. spools of stranded, 20-gauge wire.

2316. Household Noise Sources ?

Newsgroup: rec.radio.shortwave
Date: 2006-01-20 12:52:03 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <L4CdnfJSUq1zQU3eRVn-ow@comcast.com>
Source record: 58965

Hi,

Do receiving only (30 MHz on down) and presently just have a random length
wire running around attic.
Will be putting up an outside antenna once things warm up a bit.

Was wondering about household type of noise sources.

Not sure if the noise I'm picking up now is mainly from household sources
or atmospheric.
Other than turning stuff on and off, any easy way way to tell ?

Anyway, regarding household noise (other than on-off type of transients):

I imagine that the 60 Hz power stuff isn't much of a problem seeing where
most of the
listening is done.
Is this generally true, or are the higher order harmonics a problem ?

So, where is most of the noise coming from:
Is it Mainly from:

PC's
broadband cable modems
small 120 to 12 V type of wal-warts
Or,... ?

Any filters or other approaches to minimize ?

Trying to get a good understanding on this: How quickly do the fields from
these sources diminish with distance
(I would imagine very quickly, but am not sure) ?

Thanks,
Bob

"Antenna's are dangerous!!"

The antennas people put up are not dangerous. It is the people who install them that put themselves in danger.

Sounds very racist to me. Why isn't he being taken to task in the same way a white mayor would be for saying New Orleans should be an Island of White in a sea of Black.

By his lack of pre-planning and dithering during the storm that idiot was the cause of many of the problems that city encountered.

If you can operate your receiver off battery power, I suggest shutting off all the power at your circuit breaker. Then turn your receiver on and see how much 'quieter' things are. That should show you how much of the noise you hear is atmospheric and how much of it is from sources inside the house.

If you want to minimize the noise coming from various appliances in your home, pick up some ferrite beads and attach them to all the power cords. I did this and it helps. I also keep my receivers as far away from other appliances, especially computers, printers, etc., as possible. Yes, this might mean that you won't be able to control the receiver with your computer, but--at least in my case--the trade off was well worth it.

Who sells ferrite beads,websites Please? Concerning computers,I wonder if making some Faraday cages (for computer and computer monitor) out of some easy to shape and form close weave copper screen wire would help? Something that can easily be placed over (and removed for when using computer and computer monitor) computer and computer monitor and perhaps shape some copper screen wire around whatever computer related cables/wires would be of any help with decreasing RFI? Well,it's a thought anyway,I guess.Hey,I certainly am not an expert on that.

Subject: Sony 2010 synchronous detector operation
Reply to Author | Forward | Print | Individual Message | Show
original | Report Abuse

I have recently purchased a Sony 2010 partly based upon the high marks given to
the synchronous detector circuit and how it can dramatically improve reception.
I have played around with it and it does on occasion help, but not dramatically. Signals still fade, even strong ones. In my opinion it helps "a
little". It appears to function correctly. The manual instucts the user to
turn on the synchronous circuit and then rotate the tunning knob till the
opposite side band light is illuminated.
I would like to know comments from other users regarding the use of the
sychronous detector on the 2010.
Does anyone have experience with internal adjustments for this circuit?
Also does anyone know of any mods to the radio other than the one for
front-end overload protection? Perhaps a mod for some of the filters or other
circuits.

Well, because they taste like crap. :-) Carrots are fine, until you cook
them. I'm starting to warm up to squash (acorn) as long as it has lots of
butter and pepper on it. Not sure what it is about the orange food group,
I've hated it since I was a kid unlike other veggies which I hated then but
love now.

The K7RA Solar Update

SEATTLE, WA, Jan 20, 2006--As we cruise into the low part of
Solar Cycle 23, the sun has been very quiet, save for some coronal
holes providing solar wind streams. This week average daily
sunspot numbers were up nearly 10 points compared to last. The
geomagnetic field has been mostly quiet, although a little more
active than the previous week.

Over the next week expect solar flux to stay around 90, with
geomagnetic conditions quiet, except for some unsettled to active
conditions around January 23-24. Geophysical Institute Prague
expects quiet conditions January 21, quiet to unsettled January 20
and 22, unsettled January 25 and 26, unsettled to active January
23, and active conditions (higher A and K index) on January 24.

Rich DiDonna, NN3W, of Virginia writes: "While conditions on the
high bands may stink, conditions on the low bands have been spectacular. 40
meters is opening
to Europe as early as 2100 UTC from the East Coast with reliable openings to the
Middle East,
and long path to Southeast Asia. 80 and 160 have also been amazing. So, while
Old Sol may be
in 'nap' phase, one should not assume that there is a lack of DX to work!"

Jon Jones, N0JK, of Kansas echoes Rich's comments about the lower frequencies:
"160 meter
propagation to Europe from the Midwest and western USA is picking up. For a
low-band
propagation beacon I listen to the 1.2 megawatt AM station from Kvitsï¿½y, Norway,
on 1314 kHz.
Its signal has been very strong the last couple of evenings. Great 160 meter
conditions were
noted by W8CAR and others the same time to Europe."

Jon also noted an extensive 6 meter E layer opening on January 13-14 in which
W1, W2, W3
and W4 stations were coming in.

Charles Lewis, S9SS, of Sao Tome e Principe--an African island in the Atlantic
Ocean about
150 miles west of Libreville, Gabon--was one of the stations reported in a
recent bulletin by
K7HP in Arizona as worked on 10 meters. Charles writes: "The reason Hank worked
me that
night is that I also use propagation beacons. On 10 meters, I primarily depend

on the W3VD
beacon in Laurel, Maryland. That evening, as I often do, I had the receiver tuned to the W3VD
beacon while I worked at the computer across the room. About 2110 UTC I heard the beacon
rise dramatically out of the noise. I checked and found the band was becoming live with 10
meters stations. I fired up my amp and called CQ. In a period of about 40 minutes I worked about
40 stations. I would have worked many more, but it took a while of rag chewing before I was
discovered by the crowd.

"These late 10 meters openings are not very unusual for me in the 2015 to 2130 UTC time
frame. They more often start around 2030 to 2040 UTC. They might last a few minutes or they
might last a couple of hours. Until early last year, they were nearly nightly. Now they are a lot
more scarce. There have been many times that I heard W3VD with a good signal and could
raise no one or perhaps had a long rag chew with someone followed by no takers afterward.

"I also had a very good opening on 12/11, the second day of the ARRL 10 Meters Contest that
began about 2010 UTC. I worked about 115 contacts coast to coast in NA over a period of
about 50 minutes until it died. In that case also, I was working at the computer and heard W3VD
pop out of the noise. The band usually dies about as suddenly as it comes to life.

"I am only about 20 miles north of the Equator. There is only about a 20 minute variation in
sunset time over the year. The sun is usually down well before 1800 UTC, so these openings
are long after my sunset."

Charles says that on 20 through 12 meters he uses the IARU beacon system, and on 12 meters
he often hears 4U1UN in New York City coming in strong, while no one else seems to be on the
band. He says 20 meters is his best band for working the US and is the best way to
communicate with friends near his vacation home in western North Carolina.

Charles has an interesting challenge operating from his QTH from a huge Voice of America
transmitter site that seems to hover over his station.

A couple of weeks ago Carl Luetzelschwab, K9LA, had some comments about SSNe, or

Effective Sunspot Numbers, and the T-Index. He continues:

"In the January 6 'Solar Update,' I said the T Index and SSNe were similar methods that give a
better picture of what the ionosphere is doing now. Both represent an effective sunspot number
based on real-time sounding of the F2 region critical frequency. Let's look at the basic difference
between SSNe and the T Index.

"SSNe is calculated from a worldwide set of ionosondes at geomagnetic latitudes lower than 50
degrees. The SSNe plot also shows the RMS percent difference between the foF2 values used
to derive SSNe and foF2 calculated from the model using that SSNe as input. This parameter
typically runs about 20 percent or so. If it exceeds 30 percent this indicates that the global
ionosphere is departing more from the model expectation than usual. And if it exceeds 50
percent buyer beware!

"The T Index is calculated from 14 ionosondes in the Australian sector. The regional maps
(Australasia, Europe, and North America) show the difference between the predicted monthly T
Index and the current observed hourly conditions in the desired region.

"Which one is best to use? That's a tough call, but I'd personally give the edge to SSNe for
global predictions as it is based on worldwide data. Neither gives us a daily model of the
ionosphere. But both do allow you to assess whether the current conditions are generally equal
to, better than, or worse than the median value from your propagation prediction program when
using the heavily averaged smoothed sunspot number (or smoothed solar flux).

"Thanks to Jim Secan of Northwest Research Associates in Tucson for information on SSNe
and for forwarding the T Index information from Garth Patterson at IPS."

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for January 12 through 18 were 12, 0, 0, 32, 42, 36 and 50, with a mean of
24.6. The 10.7 cm flux was 76.5, 76.5, 77.4, 80.9, 83.8, 82.5, and 85.6, with a mean of 80.5.
Estimated planetary A indices were 3, 2, 3, 4, 14, 8 and 5, with a mean of 5.6.

Estimated
mid-latitude A indices were 2, 4, 2, 4, 8, 10 and 9, with a mean of 5.6.

> PC's
> broadband cable modems
> small 120 to 12 V type of wal-warts
> Or,... ?

All of the above. But some comments:

Monitors can make a lot of harmonic hash throughout the HF spectrum. TV's don't seem quite so bad in general (3.58MHz and harmonics are of course a problem!) and I don't know much about HDTV's etc.

Most wall-warts don't make a lot of noise, but small switching supplies are an exception.

Fluorescent lamps and dimmers can make an awful racket. Electronic ballasts make a qualitatively different kind of hash than magnetic ballasts. Some low-voltage DC lighting and halogen lamps make incredible noise, I have no idea why (maybe a built-in dimmer?)

Ethernet cabling running around the house can make some, especially concentrated at 10MHz and harmonics.

Noise can be conducted over and radiated by power cables, ethernet cables, video cables, keyboard cables, etc.

Motors can always be a source. Kitchen appliances are awful but not usually run for more than a few minutes at a time. Vacuum cleaners can be almost as bad. Furnace blowers, AC compressors, refrigerator compressors aren't as awful but in a modern house at least one of these is probably running somewhere.

Sometimes I fantasize about moving out to the middle of nowhere, where there is no power grid!

Tim.

Baby carrots have remade the carrot. It's not just that Americans are eating more of them ï¿½ the carrots themselves are better. Consumer demand has pushed carrot producers to take the sometimes bitter, sometimes woody carrot and breed it into a crisp, sweet powerhouse.

An idea begins to germinate

It all began about 16 years ago when Mike Yurosek of Newhall, Calif., got tired of seeing 400 tons of carrots a day drop down the cull shoot at his packing plant in Bakersfield. Culls are carrots that are too twisted, knobby, bent or broken to sell. In some loads, as many as 70% of carrots were tossed. And there are only so many discarded carrots you can feed to a pig or a steer, says Yurosek, now 82 and retired. "After that, their fat turns orange," he says.

Yurosek has always been a "think outside the carrot patch" guy. In the 1960s, Yurosek and Sons was selling carrots in plastic bags with a Bunny-Luv logo, a cartoon that got the farmers in trouble with Warner Bros., which was protective of its Bugs Bunny brand.

Instead of bringing in lawyers and spending a fortune, Yurosek recalls, "I said to my wife ï¿½ she's a pretty good drawer ï¿½ 'Hey, draw me up about 50 bunnies, would you? Then we'll send 'em to Warner Bros. and ask them to tell us which ones we can use.' "

The entertainment giant picked one, and Bunny-Luv lived on for the price of a pencil.

The farmer continued growing carrots ï¿½ and throwing them out ï¿½ for decades. But in 1986, Yurosek had the idea that would change American munching habits.

California's Central Valley is dotted with farms, fruit and vegetable processors, and freezing plants. Yurosek knew full well that freezers routinely cut up his long, well-shaped carrots into cubes, coins and mini-carrots. "If they can do that, why can't we, and pack 'em fresh?" he wondered.

First he had to cut the culls into something small enough to make use of their straight parts. "The first batch we did, we did in a potato peeler and cut them by hand," Yurosek says. Then he found a

frozen-food company that was going out of business and bought an industrial green-bean cutter, which just happened to cut things into 2-inch pieces. Thus was born the standard size for a baby carrot.

Next, Yurosek sent one of his workers to a packing plant and loaded the cut-up carrots into an industrial potato peeler to take off the peel and smooth down the edges. What he ended up with was a little rough but still recognizable as the baby carrot of today.

After a bit of practice and an investment in some bagging machinery, he called one of his best customers, a Vons supermarket in Los Angeles. "I said, 'I'm sending you some carrots to see what you think.' Next day they called and said, 'We only want those.' "

The babies were an economic powerhouse. Stores paid 10 cents a bag for whole carrots and sold them for 17 cents. They paid 50 cents for a 1-pound package of baby carrots and sold them for $1. By 1989, more markets were on board, and the baby-carrot juggernaut had begun.

California is tops in carrot production

Today, these babies come from one place: Bakersfield, Calif. The state produces almost three-quarters of U.S. carrots because of its favorable climate and deep, not-too-heavy soil. Every day, somewhere in the state, carrots are either being planted or harvested ï¿½ last year to the tune of 20 million pounds, says Jerry Munson of the Fresh Carrot Advisory Board.

Which is why Bakersfield is home to the nation's top two carrot processors: Grimmway Farms and Bolthouse Farms. In the early 1990s, Yurosek sold his company to rival Grimmway.

The Bunny-Luv logo still can be found on Grimmway's organic carrots. But it's Bakersfield's other carrot producer, Bolthouse, that carries on the Yurosek tradition. Yurosek's grandson Derek is Bolthouse's director of agricultural operations.

Minis ï¿½ what they're called in the industry ï¿½ have brought about a carrot-breeding revolution, says the USDA's Simon, who also teaches horticulture at the University of Wisconsin.

Carrots originally were sold in bulk, straight from the farm. The first advance was the "cello" carrot. Introduced in the 1950s, these were washed and sold in newfangled (at the time) cellophane bags. "Cello carrots had to look like a carrot, and that was enough," Simon says.

Enter the baby carrot. Suddenly carrots were "branded." Instead of just carrots, they were Bunny-Luv or Bolthouse or Grimmway carrots. Consumers could remember the name, and if they got a bad carrot, they wouldn't buy that particular brand any more. Breeders got to work, getting rid of woodiness and bitterness. They also bred for enhanced length, smoothness and a cylindrical quality that lets processors clip

off as little of the tip as possible.

Balancing these with the desirable sweetness and juiciness is a delicate task, Simon says. The faintly bitter taste is essential to what makes a carrot taste like a carrot. "I've had carrots that have more of a flavor note of peas or corn," he says.

Get the carrot too juicy and it breaks in the field. "There are some carrot varieties so succulent they're amazing, but they're like glass," Simon says. "Consumers like juicy carrots, but if they're all broken, you can't sell them."

None of this was done with fancy genetic engineering. "You just grow lots of carrots and look at them and taste them," Simon says. Breeders started experimenting with seed from varieties culled in the past for being too long to fit into the plastic bag.

"Prior to baby carrots, the ideal length for a carrot was somewhere between 6 and 7 inches," Simon says. Now they're typically 8 inches long, a "three-cut" that can make three 2-inch babies. And breeders are edging toward fields of even longer carrots. "You make it a four-cut, and you've got a 33% yield increase," Simon says.

Far from going to seed

Today, Yurosek is a contented man. He spends his days going sport fishing with his grandkids and trying to persuade his wife to make his favorite carrot recipe: her Bunny-Luv carrot cake.

"When you've done something you're proud of and it's been acknowledged, it's a dream come true."

I've got a Sony component AM/FM/stereo amplifier
that makes a fair amount of noise whenever it it
plugged in. (Switch-mode power supply with
poor filtering apparently.)

The computer monitor makes a fair amount of
noise too. (It is hard to shield a CRT.)

I haven't specifically tracked down
other sources in the house.
The situation was pretty poor when I just had
an indoor antenna.
So I quickly put up an outdoor antenna with
coaxial feed. That made a big difference.

I still hear some low level noise spaced every
62 kHz or so throughout the HF band.
It is not in my house but it might be in
the neighborhood.
Some day I'll get a directional antenna and
portable receiver and track it down.

Careful, just turning off an appliance does not mean it won't radiate hash.
My digital timer on the Coffee maker makes a tremendous amount of noise.
My wife has a cheap-o boom box/CD player that, even in the OFF position,
creates tons of hash.
Easy way to check (been stated here before) is to use a portable AM radio
(battery powered), tune to an unused freq, and move the radio around the
house.
I have dimmer switches, fans, treadmill, heck even the digital control on
the oven is slinging RF around.
Unplug what you can, ferrite beads for most else, and live with what
remains.
Realize that depending on how close your neighbors are, there really is only
so much you can do.

What does my doing here have to do with your obvious uneventful life,
pizza boy?

Behold he shall ride upon a hard dick and his name shall be Lloyd
Autistic Davies.

And it came to pass that the king of knob jobs in Alabama, (as Lloyd is
known) was gone for

a long time, and some of the people celebrated and some speculated that
he had died, some

speculated that he was ill, some speculated that he was in Maryland at
Ray Chason's

apartment, and some even thought that the king of knob jobs in Alabama
had been made a sex

slave by Ray Chason and his butt buddies. It was then the people
started to rejoice.

And when the niggers and crackheads heard the murmuring and rumours of
the people they

assured them that the king of knob jobs in Alabama was just busy
sucking on one of his

nigger neighbors' big black dicks and would address the people as soon
as he could swallow

that big load of nigger jizz. The neighbors in his hud apartment
complex also knew that the

project was the sucking of nigger dicks and telling lies and more lies,
but they did not

tell the people this for they did not desire to have a vice squad
nightmare in the city of

Deliverance Extras. Alabama liked to hear about the fat retarded one
who proclaimed he was

the king of knob jobs in Alabama.

And the niggers and crackheads reassured the people that everything was all right, and told

them to prepare pyres and to cook meat, and to ice down beer and nehi soda, and to go out

and buy potato chips and other unhealthy snacks from the traders who had immigrated to the

kingdom from Vietnam and the land of Gaza. And so the went down to these little stores

owned and bought these things. And they went home and warmed up their TV's, for the sabbath

approached and the sabbath would bring more action from the mediocre football team at U of

Alabama, and the sabbath would bring plenty of exciting nob gobbling action and goo

gobbling from the king of knob jobs in Alabama.

The king of knob jobs in Alabama in reality is a ghastly pale porker who stands only 5'6"

and weighs an unhealthy 290 Lbs. His skin is as white as copying paper due to his night job

of delivering pizzas to the ghetto neighborhood where he dwells in a filthy, roach infested

HUD hovel. He doesn't venture outside during the daylight hours, instead preferring to play

with Star Trek and Dalek dolls, post lies and filth on the internet and jack off to

thoughts of his unrequited love interest Roger Wiseman and dream of finally actually

getting some pussy. Not stick pussy, which his homosexual lover Steve Holsten feeds him

several times a year when Lloyd goes for his visits, usually around Thanksgiving.

Lately, the king of knob jobs in Alabama has been consumed with posting pictures of someone

he says is Roger Wiseman. In fact, the obviously botched purple rendering of somebody else

has been cut and pasted, photoshopped and distributed all over the internet by the king of

knob jobs in Alabama and his homosexual fantasy lover Ray Chason who is the king of knob

jobs in Maryland. Chason who is also a porker has set up a blog of Roger's ex-wife "Regina"

telling even more lies. Roger wasn't ever married to anyone named Regina. Of course Chason

and Lloyd refuse to let truth get in the way of their lies, like their butt buddy friends

who post lies, lies and more lies about anybody who reveals the truth about this band of

homosexual predators.

Lloyd thinks that everyone who post anything about him is Roger, or as Lloyd says...Woger.

Now what kind of "Man" would talk like that? Right, only a fucking queer! I have never met

Roger, but have talked with him many times on 20 meters, something Lloyd can't do, as he

only has a learners license for the Amateur Radio Bands. Roger doesn't have any speech

impediment, but Lloydie's girly high pitched voice with his prominent lisp has been heard

on his shitty "shows."

Lloyd recently posted some stupid baby queer shit on our message boards about his supposed

"Army of Daleks" at his command. Shit, someone needs to put this mental retard away and

throw the key away. What a big fat retarded overgrown baby!

Howdy Tim,

These three new frequencies seem to be for general ham-type chit chat. In fact, the guy I talked with on 6.670 MHz is a ham. But, I'm wondering if some of the operators of pirate stations may use these freqs. for chatting amongst themselves, thus relieving the broadcast frequencies, like 6925 kHz open for broadcasts, rather than 2-way comms.? I'm not personally a pirate broadcaster, just a radio experimenter. Sounds like this could be fun. There's something inherently interesting and intriguing about clandestines, pirates, and outlaws, at least to me.

And thanks to the others, SB and dxAce (so far the only other commenters who've shown up on my news server) for your information and input.

Tim, are you going to be on? Or are you, SB or dxAce? I'll be listening tonight and this weekend. I'm out here... somewhere. <grin>

All the best,

Starsky

Listening U.S.A. daytime: 13.555 MHz USB
Listening U.S.A. evenings & nights: 6.670 MHz LSB
Listening U.S.A. late nights: 3.475 MHz LSB
All above monitoring subject to propagation variations.
(And when I'm not elsewhere in the HF spectrum doing other things. .... ..)

My eyesight pretty much sucks. Though it has more to do with staring a CRTs
for 25 years than carrots. I'm thinkin Lasik next year.

As for sweet potatoes, I'd rather eat the pan.

That's more carrot info than I needed. :-)
I like raw carrots. The best I ever ate was when I was a youngster, we'd
have sleepouts and sneak out late at night and raid gardens for eats. Carry
a salt shaker in our pockets and wipe the dirt on our pants, yummie. Don't
know what the hell happens to them when you cook them, plain vile man.

>You can continue to bury your head in the sand about these people but the majority of people view them as the terrorists they are. <

Better than burying one's head in the sand to the interminable pain and suffering animals receive at the hands of man every day in a thousand gruesome ways....the Jews in Germany 1943, frankly and demonstrably, never had it any worse than animals do in America 2006.

Once again, we could discuss the differences in whose definition of terrorist is the better one...but that cannot ever be resolved. I stand by my basic premise that humans make life totally sucky for animals in many unnecessary ways, and anything to alleviate that suckiness short of harming people is more or less justified. Take it or leave it, I don't care which.

2365. Questions - perhaps stupid ones - regarding Polyphaser Protectors

Newsgroup: rec.radio.shortwave
Date: 2006-01-20 23:39:41 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1137800381.201245.82640@f14g2000cwb.googlegroups.com>
Source record: 59115

Okay, so quite a few folks here have heaped praise on Polyphaser's lightning protection devices, so I decided to have a look see at their website. My interest in such devices is limited exclusively to receive-only applications. I have a few questions which I hope that someone here might be able to help me out on:

First off, up to now, the lightning protection units I've used were of the variety that I would simply connect a grounding wire to the device. Looking at the Polyphaser website, I'm seeing it specified that Polyphaser's IS-50 units "should be mounted to a bracket or a flat single point grounding panel." So, is it really required that these units be "mounted" to something? Optimally, maybe I should have one, but I'm afraid I don't have a "grounding panel" as such. Is it inadequate simply to have a grounding wire connected to the device, as might be done with a Transitrap or Zap Trapper unit?

Secondly, what exactly do they mean when it is stated that "This unit is used primary on HF, UHF, and VHF radios that do not use a DC voltage." Is this something pertaining specifically to ham applications?

Thirdly, what are the differences between the IS-50 series and the B50 series. (I guess this gets into this mounting issue again?).

Thanks in advance for any help on these questions,

Junius

2366. Electronic Specialty Products - Lightning Guard 100 V

http://www.universal-radio.com/catalog/protect/2820.html

Anyone own/use one of these? The purpose of this unit is to ground lightning surges from your antenna to your AC grounding? The first part of the product description would has me thinking this, but then they end the product description with "Lightning Guard is not intended to replace a surge protector. It is designed to work with aftermarket surge protectors, line conditioners and UPS devices..." (If it's for the antenna, then I guess I just don't see any need for mentioning UPS devices and the like).

http://www.newsmax.com/archives/articles/2006/1/19/142235.shtml

---

Over 20 million euros to breathe new life into Communism in China

According to Hong Kong's influential South China Morning Pos, the plan is to revitalise the party and turn China into the beacon for Marxist studies, this despite more than two decades of capitalist market reforms. Indeed, the country's Communist leaders always defined such reforms as "socialism Chinese-style" and have never given up on considering their regime as Communist. They continue to reject Western-style democracy and want to preserve the Communist Party's hold on society.

Two factual errors:

1. Communism is not Socialism. These are completely different systems.
In fact, George Orwell (ne Eric Blair) of 1984 fame, HATED communism
even though he was a Socialist, and countries like Sweden are both
socialist and 100% democratic and free.

2. NewsMax is not a reliable source of news. Ignore.

2370. Re: Household Noise Sources ?

Newsgroup: rec.radio.shortwave
Date: 2006-01-21 01:01:50 UTC
From: ross@6502.org
Message-ID: <1137805310.020060.142690@g49g2000cwa.googlegroups.com>
Source record: 59120

Unless all your appliances are analog/ancient-tech (no digital clocks, CPUs, no dimmer switching circuits, etc.), chances are your house is generating torrents of hash and noise.

If your radio is portable, there's a really easy way to tell. Take the radio to a park or other open area that's at least 1/4 mile from any apartments, businesses, or strip malls, and tune around. Make note of a faint signal or two that's clearly audible, then see if those signals are audible from the house, preferably on the same night.

If the signals are buried in noise at your home, odds are either your house or nearby homes are generating the noise, since atmospheric noise doesn't ordinarily vary a lot with small variations in location or time.

Hope this helps

If the use of near-slave labor to manufacture cheap goods (and create tremendous downward pressure on global wages) weren't enough, China's rapidly buying up US debt.

I wonder what would happen if China dumped (sold) all its dollar reserves and bonds on the market all at once.

These big-spending idiots are running 400 billion to half-a-trillion dollar deficits on gigantic government spending, and despite the massive fiscal stimulus created in the short term, the US economy is terrible for anyone who gets their income from wages.

Now an economic collapse is inevitable thanks to the reckless idiot Republican overspenders in control of all branches of government.

Yay, Bush "Herbert Hoover" Bush Depression, here we come :)

So what that China is putting it's money in U.S. debt. U.S. debt is
typically thought of as a secure investment worldwide.

>
> I wonder what would happen if China dumped (sold) all its dollar

Think that whole process of China selling it's bonds and emptying its
reserves through slowly and completely.

Really? How is the US economy terrible for anyone who gets their
income from wages.

>
> Now an economic collapse is inevitable thanks to the reckless idiot
> Republican overspenders in control of all branches of government.

First off, please define an "economic collapse".

Next tell me which projects are being overspent on and then tell me how
you would cut them back. Please take the time to be specific, because
your comment that the "collapse is inevitable" leads me to believe you
have done a thorough analysis.

>

Source record: 59123

The PolyPhaser protection devices are primarily used by 'industry' in installations that typically have rack mounted radios in equipment rooms that contain a large copper 'buss-bar' at the coax entrance into the building. The various mounting options are simply meant to enable these types of users to select the most appropriate mounting (and, subsequently, grounding) method for their particular installation.

For a home SWL application, here's what I'd do: Purchase model # IS-B50HN-C0. Drive a ground rod into the earth where your coax enters the home. Drill a 1/4" hole through the ground rod. Bolt the IS-B50HN-C0 bracket to the ground rod with either a bronze or stainless 1/4 20 bolt. Weatherize with PolyPhaser part #WK-1. Attach you coax in / out.

Relax, and listen to the radio!

Source record: 59124

Sorry - as to your second point: DC power is required by some antennas to power a amplifier mounted at the antenna 'head'. A SWL equivalent would be some 'active' antennas, where there is an actual amplifier outdoors, immediately following the receive element. To power these amplifiers, DC voltage (like 12 - 24 VDC) if applied to the center conductor of the coax.

The PolyPhaser devices you reference do NOT allow this DC power to pass, hence they would not be suitable for an 'active' antenna, but would be perfectly acceptable for a 'passive' (like a long-wire) antenna.

And yes, your third question relates directly to how the device is mounted.

And no, simply connecting a wire to the Polyphaser (and then running the wire some distance to - say - a cold water pipe) would not be wise. Again PolyPhaser is interested in protecting radios mounted on mountaintops or in Central Florida that are vital to 'industrial' communications. Hence, a solid, *direct* path to ground is *essential* for the device to be effective.

Source record: 59125

I'll even throw in some extra here...

To do it right, you need to have ALL your utilities enter the building at just one location. And at that one location, you have them all go through a grounding plate. This is also where the surge protectors go. This way, you don't have two (or more) different grounds with your equipment. As it is right now, you probably have a radio ground and a power ground. Even if they have about the same DC resistance to ground, just a small difference (say one eighth of an ohm), the voltage applied to both grounds by a lightning strike (close or direct) would develop a large amount of voltage between the two grounds - hence high current through your equipment - and smoke. Simple ohms law. Polyphaser equipment is designed to help control the current and voltage of a lightning strike. Not to hope it goes this way or that way. Ultimately, these sites git hit by lightning even more!, but people are in control. Not mother nature.

The old adage in ham radio goes -- you can protect yourself from a near by lightning strike, but not from a direct strike. But when you think about it, this adage really isn't true. Commercial TV and radio stations get hit all the time, but they stay on-the-air. How do they do it?

Unless you have your electrical, phone, Cable TV and any other electrically related utility enter your house at the same location, and have it grounded right there, running a different ground wire to a new ground rod and tying it all together with a fancy polyphaser is just a waste of your time and money.

With this type of setup, any surge coming into your home (on any of the utilities) will go to the most favorable ground of another utility (or hopefully your building ground itself) and say outside of your home, protecting all your gear inside.

Then again, just disconnect your antenna(s) when not in use - he he.

-Tim

OK, I'll bit at this one too (just finished PolyPhaser).

This device contains simple relays that - when energized - connect the AC power from you wall socket (to which this device is connected) to your radios (which are in turn connected to this device). it apparently also has an antenna jack that is similarly 'relay connected'. When you command this device 'off', the relays relax, and are wired in such a way that your radio(s) Hot / Neutral and Ground (if any) wires are connected to the 'third prong' on the AC outlet - nominally "ground". This *assumes* that your house wiring has a legitimate, solid ground contact via your 'service entrance' or 'circuit breaker panel' which - in my experience - is an "iffy" assumption.
So, no: this device is not a 'surge protector', rather a simple switch that allows you to 'conveniently' ground the AC input to your receiver and antenna by pushing a switch. It does nothing to prevent surges that may devour your radio if you happen to have the device 'on' when the surge strikes.

Howdy again.

Well... I'll probably just be in the listen mode. I share your interest in pirate broadcasting. They're just fun to listen to - especially if the programming has some thought behind it. Some pirates just rant and rave about crap and I find them boring.

In the past, I've also heard pirates complementing one another after a show, but it was always on the same frequency they were just broadcasting on. Sounded kinda interesting to me!

Will plug those three freeks into my database and start listening myself. Thanks for the update.

-Tim

Well, the thing is that a true lightning mitigation system is just
that -- a system, with multiple parts working together.

Ideally, in a perfect world, you'll use something called a ground
window -- a copper plate -- to mount that suppressor on. You'll also
mount a supressor for your power source (if it isn't an isolated
battery) and any other wire going into the device (radio) or devices
(associated computers, for example) you want protected. ANY wire
going to the outside world goes through some suppressor mounted on the
ground window. The ground window is tied to your home safety ground
(via the three prong cord on the power-line supressor) and to your
grounding rod system (via a flat copper strap from the ground window
to rods and/or radials).

Sound complex? It is. But if you have expensive radios, you want to
build to this level of protection: What do you lose if your radio,
computer, etc, all get nailed by a strike?

BUT... you can build it up gradually as you get a budget. Certainly
the Polyphasor suppressor is going to do as well or better than Brand
X, by itself. But, by itself, it's not a complete solution.

...as for the second question, that's much easier: The suppressors
block DC from passing through. Some people use that for antenna
control signals or for preamps. That's much more common in, say, a
satellite TV system or a GPS antenna, though.

Hope this is helpful...

> ....the Jews in Germany 1943, frankly and demonstrably,
>never had it any worse than animals do in America 2006.

>And this is where the animal rights movement loses ALL credibility. <

You can say this until the end of time - but you (and everyone else)
fail to prove me wrong (and by proof I mean objective fact, not
subjective opinion). The lack of credibility lies with those who
insist that animals do not feel pain and suffering the same way humans
do.

Eventually, humans will fully develop the compassion God gave them. I
don't know how long it will take, and I am not sure how it wil come
about, but I am sure it will happen. On that day, the incalculable
mass misery suffered by other life at the hands of humans will end.

On the weekend of Jan 6th, a windy rain storm came through my area and
broke my antenna wire. I repaired it with about a loss of 10 feet of wire.
My antenna is now about 70 feet in length and is now at an angle. Reception
of the bands from about 4.7 to 10 Mhz has been GREAT during the morning to
noon hours. 21 mHz has been dead most of the time with 17 mHz down to 11 mHz
normal reception. I do not know why the lower bands are suddenly alive with
strong signals BUT I understand the reception in Australia is also
tremendous too! What is happening??? Whatever it is, I hope it will last a
long time for us radio listeners.

I own and use a Brickwall model PW8R15 Surge Protector.
www.brickwall.com www.pricewheeler.com My webtv set top box and my
RCA 27 inch screen tv set and my DirecTV set top box and my other tv set
that I use with my DirecTV and my DVD recorder/player and my APC model
1000 computer battery back up device and whichever radio I am using are
plugged into my Brickwall Surge Protector.About a week ago at 6:20 AM in
the morning,the transformer on top of the power pole by my driveway,one
side of that transformer blew out/quit working.It was making loud Thwap!
Thwap! Thwap! Thwap! Thwap! noises and when it was doing that,I could
see flashes of bright light on those wires up there.One half of the
electric circuits in my house were not working,but the electric circuit
wall outlet my Brickwall Surge Protector is plugged into kept on
working.The wall outlet my lamp is plugged into,that lamp was flaring
off and on.Everything that is plugged into my Brickwall Surge Protector
did not falter,did not flicker at all.If y'all want the very,very best,I
Highly reccomend Brickwall.

Thanks for the excellent replies everyone. I truly appreciate the info, and I've made note of more than a few excellent suggestions made in this thread.

Unfortunately, being a 7th floor apartment dweller, it doesn't seem like this sort of a lightning mitigation system is the works for me at present. I'm dependent on my cold water pipe for the next year of so until I get out of this place!

So, in the meantime, I'll continue using the inferior quality devices, and, following Tim's sage words, I'll continue keeping my various antennae disconnected when not in use!

Thanks again, folks.

Sounds like a really decent unit, Cuhulin. I use a couple of Tripp
Lite units for the AC line. So far, so good... But (thankfully)
neither has been put to the test as your Brickwall unit has been!

Right. One has to totally remove the power, e.g. unplug it
in many cases, as I mentioned with regard to my Sony stereo.

Eliminate the Brickwall. Same 'damaged' and 'not damaged' appliances would have happened. cuhulin describes a transient that damaged 'left side' 120 volt appliances and did not occur on the 'right side' 120 volts. His Brickwall on the 'right side' 120 volts explains no damage there. Remove the Brickwall and those 'right side' appliances would have suffered no damage.

Meanwhile, Brickwall contains a wire that carries destructive transients directly around - bypasses - Brickwall protection. They forget to mention that weakness. Brickwall is a good supplemental protector. Supplemental. But cuhulin forgets to mention a necessary shunt mode (earthed) protector is still required. With or without the Brickwall series mode protector, a building still requires a shunt mode 'whole house' protector connected short to the all so critical earth ground.

So what protects those bathroom GFCIs, smoke detectors, dishwasher, and furnace controls? Will you buy a Brickwall protector for each of these? Another reason why a shunt mode 'whole house' protector is necessary - at about $1 per protected appliance.

Described is secondary protection that all homes with transistors require. Also necessary is inspection of the dwelling's primary protection:
http://www.tvtower.com/grounding_and_bonding.html

After the primary and secondary protection systems are installed, then supplemental series mode protectors such as Brickwall can enhance that protection 'system'.

Socialism is incompatible with true freedom and representative democratic principles. Socialism like Marxism is not compatible with human freedom because it requires state involvement in economic decision making as well as personal freedoms such as economics and investment. Socialism puts major industries under state control or jurisdiction as happened in the past in the UK and European countries. Socialism as well as Marxist-Leninist thought is not compatible with human freedom because it requires state socialism rather than production and economics being in the control of the individual, business, or corporation. To be truly free is not to be coerced into turning personal control over to the state. While it is true that Eric Blair was a socialist and not a Marxist Leninist he was still not totally into freedom American style.

In fact, if you notice that before 1933 over half of the good and services produced in the world were produced by the free market and free enterprise system of the American people. Democracy is the problem of mob rule. In fact, the founders of the United States were adamant in declaring this nation a republic which is totally different than a democracy. In a democracy, all one has to have is a majority and have your rights voted away.

Hi Lisa, you can find a good used IC 75 for probably 400 or so on the open market and a new one is around 550 or so.

Source record: 59005

Yep, it's great fun, cuhulin! I've researched the three frequencies quite extensively and they pose no threat to governmental use that I can find. Some EU military operations may occur on the 6 MHz frequency, and there's some research buoy off the coast of FL, USA, that uses the 3 MHz freq., I believe (or I may have those two freqs. inverted, I dunno...) but there seems to be no other activity of consequence. And, the 13 MHz frequency is a Part 15 allocation in the U.S. Of course any government could use any frequency they choose, so care should always be taken when pirating or outbanding. Interfering with licensed and/or "legitimate" comms. is definitely not cool. Just be careful! :)

All the best,

Starsky

Listening U.S.A. daytime: 13.555 MHz USB
Listening U.S.A. evenings & nights: 6.670 MHz LSB
Listening U.S.A. late nights: 3.475 MHz LSB

Hi, Radio challenged person here, wanting to make a simple (low cost) FM radio antennae!

I only want it to pick up one station from Tampa. I get the station but it fades in and out.

I am a great handy man and have lots of surplus wire and coax wire.

give me an idea of what to make.

thks

ps: any sites with idea.

Along about 10:00 AM that same morning,Entergy (the local power electric company here in Jackson,Mississippi) had replaced that faulty transformer up there on the power pole with either a new or rebuilt transformer.Fortunately,there wasen't anything in my house that suffered any damage,or at least not as far as I can tell anyway.I dont have any electronic dimmers,my little doggy is my smoke detector nowdays,she would hit the ceiling if she smelled any smoke.I wash my dishes by hand in my kitchen sink,I do have two old floor furnaces with old furnace control/thermostats that date back to at least 1947 when my old wood frame one storey house was built,CFCLs?,I am a dummy,what are CFCLs? I have one floursecent light bulb in a lamp in my kitchen,all of the other light bulbs I use in my house and outside on my front and back porches are the old fashioned incadescent light bulbs because that is my preference.My webtv set top box is connected to one RCA tv set,one DirecTV set top box connected to another tv set,my computer and computer monitor.Other than those items,I can't think of anything else in my old house that causes a lot of RFI hash.I am not trying to argue with you about Brickwall,it seems to me you know more than I do about such matters.OK,I know my Brickwall works and works very well,I am completly satisfied with my Brickwall Surge Protector.

- article in Monitoring Times a while back about ganging FOUR or more
FM antennas together, pointing them where you want to pick up &
getting a nice, strong signal

- else try 100 feet bellwire !

Note:

Get proper harnesses, ladders, scaffolding for roof work
- else buy crutches prior to starting..

2415. Re: Help with an FM antenae!!

Newsgroup: rec.radio.shortwave
Date: 2006-01-21 15:35:02 UTC

Every now and then, people around here who have coverted to cable toss their old TV antenna off the roof. And when I say "toss," I mean toss. The antennas are usually mangled by smacking into the ground. If not, then the owners will stomp on them until the antenna fits into the trash can.

One recent exception was, of all things, an amateur operator. He carefully lowered the antenna and left it undamaged next to the trash can. I scavenged it of course. Since FM is between channels 6 and 7, a TV antenna is at least a starting point.

As for the mangled ones, sometimes it's just the elements that are mangled. The central boom is still straight. In that case, I would be tempted to break open an ARRL antenna book and build an antenna that was optimized for performance at the one frequency that was of interest to me.

In my case, there is an FM station in Annapolis that is impossible to receive well on a regular basis, so I am in the same boat. I would aim the antenna towards Annapolis and forget about using it across the band.

2416. AP: Presidental Library Destroyed By Flood.

PRESIDENTIAL LIBRARY DESTROYED BY FLOOD

Crawford, Texas -- A tragic flood this morning destroyed the personal library of President George W. Bush. The flood began in the presidential
bathroom where both of the books were kept. Both books have been lost.

A presidential spokesman said the president was devastated, as he had almost
finished coloring the second one.

The White House tried to call FEMA but there was no answer.

You don't say how far you are from Tampa, or the call sign or frequency of the Station you're attempting to receive, but generally speaking:

You'll need an antenna with gain and directivity. These designs are usually of the 'Yagi' or 'Log Periodic' design, and can be home-brewed but are so inexpensive to buy that it may not be worth the effort. The greater the number of 'elements' the antenna has, the greater its gain and the narrower its directivity.

The Radio Shack unit link in a previous post will do a good job if the Station you're after is within about 30 miles (assuming flat terrain - oh right! you're in Florida!) and a reasonably powered Station.

This 8 element Yagi: http://www.fmdxantenna.com/ may do a bit better, and there are 10 element antennas available elsewhere, likely good for about 70 mile reception.

Do youself a favor, and put the antenna on a rotor, so that when the Station you're now interested in changes format, you can rotate the antenna around looking for an alternative!

2421. Radio Stations in the UK - new edition now available

Newsgroup: rec.radio.shortwave
Date: 2006-01-21 16:56:19 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <43f7dhF1ms22aU1@individual.net>
Source record: 59021

The new 2006 (20th) edition of Radio Stations in the United Kingdom is now available from the British DX Club.

Radio Stations in the UK is a comprehensive 60-page guide to BBC, commercial, community and low power AM/FM services on MW and FM, with lists in frequency order and by station name. It includes transmitter power and site details, plus contact information. Frequencies are cross-referenced to help you find parallels. It comes with a separate supplement - Radio Stations in the Republic of Ireland.

Its been two years since the last edition was published, so there are lots of changes. This new updated edition can now be ordered for immediate despatch.

Radio Stations in the UK is a must for anyone interested in UK domestic radio - from the keen mediumwave or FM DXer to the casual listener. Why not order a second copy to keep in the car - we have a special price for two copies!

PRICE of the new 20th edition per copy (includes postage):
to UK addresses: - 3 pounds.
Rest of World - 3.50 GBP, 6 Euros, 8 US dollars or 8 IRCs

**SPECIAL PRICE for 2 copies: UK: 5.50 pounds Europe: 10 Euros **

All orders should be sent to:

British DX Club
10 Hemdean Hill
Caversham
Reading RG4 7SB
UK

UK Cheques/POs payable to British DX Club.
Dollar/Euro payments by cash or Paypal only

E-mail enquiries/paypal payments to bdxc@bdxc.co.uk - please add 5% to cover Paypal fees.

Full details also on the BDXC-UK web site - www.bdxc.org.uk

Sorry about you opinion on Tennessee Trash!

Lot's of 340 owners will tell you they wish they had never bought the rig!

They are "FAIR" at best!....And mine have been to Ten Tec twice to see if
they can be "fixed" or "Improved".

Each has had a dozen different antenna systems tried on them and still they
suck. They "Sucked" at Ten Tec on their antenna as well while I was there!

I live 20 minutes from Sevierville and thats why I bought them.

Both of mine will be coming up on Ebay soon.

Isn't it a mighty big coincidence that Osama returns for a bizarre appearance just as Bush is on the ropes for illegal spying on Americans -- and as Karl Rove announces that he is going to use fear again to maintain one-party dictatorial control over America in the fall elections?

Not that we are skeptical or anything, but on top of that, the White House media echo chamber used the alleged and ludicrous "negotiate or I will attack" video to vilify Dems for being weak in the war on terror and "aiding" the "enemy."

Of course, it was Bush who said a few years ago, he would get Osama dead or alive -- and then after failing to do so said that Osama didn't matter. It wasn't long after that that he told NBC's Matt Lauer that he didn't think we could win the war on terror. (We're not sure if he was talking about the bad guys or his war of terrorizing Americans, but we think he meant the war against the bad guys.)

But the Republicans are all attack and no truth. Something the Democratic leadership just can't absorb, so the GOP junkyard dogs project George's short fallings (too numerous to count) on the dreaded "liberal enemy." This is called scapegoating.

It is the eternal tool of the demagogue. Ann Coulter is both the caricature and the real epitome of the strategy. In essence, it relies on making anyone who disagrees with our Il Duce as the enemy.

The Jews in Europe experienced this, and yes the comparison is appropriate. We don't apologize for it. Just read Mein Kampf. You make your opposition (or a "perceived" opposition) into something to be so dreaded that they pose a threat to the national interest and need to be suppressed.

Yes, the Jews in Germany thought, "It can't happen to us, not here in a civilized nation." But what is civilized about the gulag of torture centers that Bush, Cheney and Rumsfeld have set up? It's a short leap from "them" being tortured to anyone who opposes the "supreme ruler."

So paid propagandists like Sean Hannity employ the Goebbels techniques of equating terrorism with Republican political opponents. The very title of a recent Hannity propaganda tome reveals this strategy: "Deliver Us from Evil: Defeating Terrorism, Despotism, and Liberalism." Because evil, in the right wing extremist world, is both terrorism and liberalism.

As a blurb for "Deliver Us from Evil" claims, "he [Hannity] reveals why the Democrats imploded and the president prevailed-while urging

Americans to stay the course and remain vigilant about the twin dangers of terrorism abroad and liberalism at home."

Hannity is employing the "mirroring" linguistic techniques that George Bush's handlers had him use to sell the Iraq War by placing the phrase "9/11" and Saddam Hussein together in as many sentences and contexts as possible. In Hannity's case, the goal is to put terrorism and liberalism in the same category of evil. Liberals are the enemy because they endanger America, he argues.

This is very dangerous territory, which the Democrats are intimidated by, just as the Weimar Republic fell to the bullying and emotional demagoguery of the brown shirts. Liberals and Democrats who think that this is just some sort of passing lowbrow phenomena are making a critical error. Liberals are being "mirrored" with terrorists as the source of "evil" in America.

You ignore such demagoguery at your peril.

That is what Bush was doing when he said that there are "appropriate forms" of debate on the war -- and "other" forms that aid the terrorists. The latter are any criticisms of his actions. If you say he is committing an illegal act, you are aiding the enemy.

And so it was time to roll out Osama again. To continue his march toward dictatorship, Bush requires Osama . They are, in a way, two adversaries who need each other for political survival among their constituents.

If Bush didn't have Osama, Rove would have invented him.

You can do a lot of things to create great videotape "B" roll, just watch the movie "Wag the Dog."

It's the Bush game plan in a nutshell.

Just repeat after us: Fear, Distraction, Fear, Distraction, Fear, Distraction...

Yes, there's a terrorist threat to our way of life. But there's also a more immediate threat to our Constitution, our democracy and our liberties coming from the White House. In the name of preventing the terrorists from attacking us for our freedoms, Bush is taking them away from us one by one. He is letting the terrorists win. He is betraying America.

Osama has checkmated him.

The real enablers of helping the terrorists achieve their goals of bringing democracy to its knees are in the White House.

And, although memory in a time of 6-hour news cycles is fleeting, it might be worth a little jog of the brain to remember that an alleged Osama tape showed up the Friday before the 2000 presidential election,

widely credited with helping George W. Bush gain votes based on the subconscious "fear factor."

Such coincidences have a way of continuing to occur at vitally important moments for the Bush Administration, don't they?

Either Osama wants Bush to stay in power -- and, therefore, Bush is the real choice of the terrorists -- Osama is working in cahoots with the Bush Administration in a sort of a wink and a nod "understanding between enemies" sort of way, or the video was fabricated.

It's one of the three folks, because Osama is not dumb -- and he knows that the release of any video or audiotape at such times only strengthens Bush's hand to clamp down on freedom and the Constitution domestically (a goal of Al Qaeda according to Bush himself), strengthen the consolidation of Imperial presidential powers, and continue the war in Iraq and the torturing and killing of anyone Bush's crew considers a "non-combatant threat."

And this videotape will be used by the Busheviks to try and bolster their right to illegally wiretap Americans -- and then use that precedent to further break the law and violate the Constitution.

So why would Osama release videos and taperecordings at moments that only help Bush when he is in political need?

Ah, now you understand.

Sometimes. Some TV antennas are built to have a "hole" between 6 and 7; they won't do much good. But when the antenna is free, it's worth a try. :)

Rove admits GOP will play politics with 'war on terror'

Capital Hill Blue | January 21 2006

Scandal-tained White House adviser Karl Rove admitted Friday Republicans will seek to capitalize on the war on terrorism as a central campaign issue in November.

His admission confirms Capitol Hill Blue reports from November 10, 2005, that the GOP planned to use terrorism as a way to reverse the party's sagging fortunes.

"Republicans have a post-9/11 view of the world. And Democrats have a pre-9/11 view of the world," Rove told Republican activists. "That doesn't make them unpatriotic, not at all. But it does make them wrong -- deeply and profoundly and consistently wrong."

Democratic Party chairman Howard Dean denounced Rove's remarks and renewed his call for the deputy White House chief of staff to be fired for his role in leaking a CIA official's name. "That is both unpatriotic and wrong," Dean said.

In November, Capitol Hill Blue revealed a private GOP memo, circulating among top Republican operatives, "suggests that a new attack by terrorists on U.S. soil could reverse the sagging fortunes of President George W. Bush as well as the GOP and "restore his image as a leader of the American people."

Rove, making a rare public address while under investigation in the CIA leak case, joined Republican Party chairman Ken Mehlman in warning GOP leaders against falling prey to the corrupting nature of power.

"The GOP's progress during the last four decades is a stunning political achievement. But it is also a cautionary tale of what happens to a dominant party _ in this case, the Democrat Party _ when its thinking becomes ossified; when its energy begins to drain; when an entitlement mentality takes over; and when political power becomes an end in itself rather than a mean to achieve the common goal," Rove told Republican National Committee members ending a two-day meeting.

"We need to learn from our successes," he said, "and from the failures of others."

The admonition reflects growing concerns among senior Republicans that ethics scandals in the Republican-led Congress could hurt the party in November, even among staunch GOP voters who may begin to blame corruption for Congress' runaway spending habits.

Mehlman couldn't have been more blunt: "One of the oldest lessons of history is that power corrupts," he said, telling RNC members that any Republicans guilty of illegal behavior should be punished.

The investigation of lobbyist Jack Abramoff threatens to ensnare at least a half dozen members of Congress of both parties and Bush administration officials. His ties to GOP congressional leaders and the White House pose a particular problem for Republicans. Abramoff, who has admitted to conspiring to defraud his Indian tribe clients, has pleaded guilty to corruption-related charges and is cooperating with prosecutors.

In an unrelated scandal, I. Lewis "Scooter" Libby, former chief of staff to Vice President Dick Cheney, is expected to stand trial in the CIA leak case this summer, just ahead of the midterm elections.

The special prosecutor's inquiry is still under way, leaving the fate of other senior White House officials, notably Rove, in doubt.

Bush's political guru opened his remarks with a joking reference to the unwanted attention the case has brought him. "Anybody want to get their picture in the paper? Come on up here," he said.

In 2002, Rove caused a stir among Democrats when he told RNC members to make the war on terrorism an issue in the midterm elections. "We can go to the country on this issue because they trust the Republican Party to do a better job of protecting and strengthening America's military might and thereby protecting America," he said at the time.

Rove made the same case Friday, though his words were a bit more measured. Reading from a prepared text, he began with a call for election-year civility _ "Our opponents are our fellow citizens, not our enemies" _ and quickly turned to portraying Democrats as weak on defense.

"The United States faces a ruthless enemy _ and we need a commander in chief and a Congress who understand the nature of the threat and the gravity that American finds itself in," Rove said. "President Bush and the Republican Party do. Unfortunately, the same cannot be said for many Democrats."

He said some Democrats want to abandon Iraq too soon, which would cause enemies to "laugh at our failed resolve." Rove added: "To retreat before victory would be a reckless act _ and this president and our party will not allow it. This is worthy of a public debate."

Rove also criticized Democrats for opposing extension of the USA Patriot Act and warrantless eavesdropping, before turning to Alito, newly minted Chief Justice John Roberts and their Democratic opponents on the Senate Judiciary Committee.

"Every effort to smear the name of these good men blew up in the face of those making the malicious charges. Some committee members came across as mean-spirited and small-minded _ and it left a searing

impression," Rove said. He specifically accused Sen. Edward Kennedy, D-Mass., of creating "an ugly display" during Alito's hearing.

Before the RNC members returned to their home states, they approved an immigration resolution supported by the White House. A competing measure backed by hard-line conservatives opposed to Bush's guest worker program was withdrawn under pressure from White House allies.

Yeah, and Osama is armed with a complete list of DNC talking points, too.
He's right behind Ted Kennedy in claiming torture in our prisons; he's
right with Nancy Pelosi who says "fight them there, not here" isn't working;
he's up there with Kerry condemning Bush's "Mission Accomplished" on the
carrier; and he sides with Joe Biden in saying that security in Iraq is
poor. He agrees with Shrillary that Bush has mismanaged the war, and
he says Howard Dean is right in predicting that we'll lose the war.

I skipped most of the text because you couldn't decide whether conservatives
were Nazis or Communists.

Hi,
There are a few listings for Israel broadcasts to North America on www.primetimeshortwave.com . I would like to receive it out of curiosity for their news on Ariel Sharon. Each time in the past two weeks that I tried to tune in, I haven't picked it up. The schedule on primetimeshortwave can be confirmed here: http://israelradio.org/sw.htm (although I just emailed the primetimeshortwave maintainer to note that a frequency listed for North America appears to be targeted to Africa).

Has anyone had luck receiving an English broadcast from Israel?

Anybody putting up an antenna needs to plan how it may come down
accidently. A tower needs to have a place to fall without hitting other
structures. Any kind of antenna conductor needs to be away from power
lines so they will not fall on top of them. You would want to be away
from power lines for noise issues anyway. You have to know you are safe
walking around on a roof or you should not be up there.

Author of the above: http://www.levnavrozov.com/

"Lev Navrozov: NewsMax.com columnist and journalist. One of the most
brilliant minds in the world, according to many distinguished Westerners and
Russians. Published over 1,000 columns and articles on the destiny of
civilization, world culture, foreign policy, strategy, defense, and
intelligence work since his emigration from Russia in 1972. Winner of the
Albert Einstein Prize for outstanding intellectual achievements. Author of
The Education of Lev Navrozov (Harper & Row, 1975), compared by the
reviewers to Mark Twain, Proust, Orwell, Voltaire, and Dostoyevsky. More
than twenty of his articles are in the United States Congressional Record.
...
As for my book, Saul Bellow, possibly the greatest American novelist, a
Nobel Prize laureate, a scholar, and a thinker, has defined the importance
of it in a letter to me as follows:

I doubt whether you (or anyone) can restore the diminishing sight of what
you call "the sightless and hence doomed" West. What one can attempt is to
describe the condition in its fundamentals. This indispensable description
if it is to be uncontestable will take more strength than any normal man
has, for what we have is a probably fatal case of political poisoning, and
the distortions and hallucinations it causes may be impossible to dispel.
You must have more strength than any normal man has, or you would not have
set yourself such a task.

President Clinton, in his second term, and President Bush in his first,
stopped noticing what had been called the "China Threat." What does this
mean?

Let us begin from the beginning...

2445. OT Islam Beheaded

Newsgroup: rec.radio.shortwave
Date: 2006-01-21 20:45:16 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11t57c4hoh2th1a@corp.supernews.com>
Source record: 59039

Why Muslims won't admit the truth about Islam's prophet.

Heinrich Heine once wrote a clever poem titled "Marie Antoinette," in which the ghost of everyone's favorite French queen entertains her guests with "strictest etiquette." The irony of the poem is that neither Antoinette nor her guests realize that their heads are missing. They were all beheaded during the French Revolution, but without their heads, they don't have the brains to acknowledge their headlessness.

Islam is currently in a similar situation. Muhammad's empire of faith has managed to thrive in the modern world for one simple reason: Muslims have kept Muhammad's dark past a secret. Indeed, they have gone beyond keeping it a secret; they have somehow convinced themselves (and many others) that Muhammad was an outstanding moral example, perhaps even the greatest moral example of all time. Perpetuating this fraud has been the most stupendous deception in world history.

Fact #1: When Muhammad began receiving his revelations, his first impression was that he was possessed by demons.

Fact #2: Muhammad supported his fledgling religion by robbing people.

Fact #3: Muhammad was often ruthless towards his adversaries. Punishments for taking a stand against Muhammad included torture and death. Both men and women were brutally killed for criticizing Muhammad. Hundreds of Jewish men were beheaded for standing against him, while their wives and children were sold into slavery. Some early Muslims who apostatized were killed after Muhammad gave the command to kill all who turn away from Islam.

Fact #4: Muhammad had far more wives than even his own revelations allowed.

Fact #5: Muhammad consummated a marriage to a nine-year-old girl.

Fact #6: Muhammad had a contemptible opinion of women.

Fact #7: Muhammad is unique among prophets in that he is the only one to receive a revelation, proclaim it as part of God's message to man, and later take it back, claiming that it was actually from Satan.

These are just some of the facts that Muslims have been keeping secret, but they are enough to make any reasonable person doubt the validity of Islam.

Muhammad was guilty of countless murders and of torturing his victims. He robbed caravans and participated in the slave-trade. His persecution of the Jews bordered on genocide. His polygamy went beyond that which even his own revelations permitted (though he did receive a revelation saying that this was okay for him) . One of his wives was a nine-year-old girl, whose earliest duties in Muhammad's house included the constant task of washing

the semen stains off his clothes. At times he believed he was demon-possessed or under the effect of magic. He was known to be suicidal. He admittedly received a message from Satan and delivered it to the people as if it were from God. He declared that women have half the intellectual ability that men have, that it is okay for men to beat their wives, that most of the inhabitants of hell are women, and that, even if a woman somehow makes it to heaven, her eternity will consist of standing in a corner, waiting for men to sexually enjoy her.

These details about Muhammad raise a very important question: What does a prophet have to do before Muslims will be willing to question whether he is truly the greatest moral example in history?

2450. Reception reports

Newsgroup: rec.radio.shortwave
Date: 2006-01-21 20:54:02 UTC
From: bradvk2qq <bradvk2qq@w6ir.com>
Message-ID: <1137876842.308144.287450@g44g2000cwa.googlegroups.com>

I've just sent off my first broadcast shortwave reception report for about 25 years. I listen, but I don't usually write. This report was to AWR since the signal I was hearing was not on their schedule.

What format are you now using for reception reports. Do you email or snail mail reports. Do you still use SINPO code? Any other details I should know?

Thanks
Brad.

Depends on your listening location and also when you can listen. For
the past few months I've not been able to copy their broadcasts when I
am home to listen - which is their 0430 transmission (8:30 pm here on
the left coast). Keep trying and in the meanwhile there is always
[pardon the following blasphemy] their webfeed......just don't get so
dependent on the web that you forget to turn on your radio from time
to time.

The Democratic Party benefits, because the only way they can get anyone
elected to office is to persuade the American people to hate the Republican
opponent. The few times they've actually had a platform, it was something
like Walter Mondale campaigning on the promise to raise taxes significantly.

"Robert11" <rgsros@notme.com> wrote:

> Hi,
>
> Any idea how quickly in distance these household noise generated fields
> diminish to values unlikely to be picked up ?

< Snip >

This is a complex question. Firstly to consider is that there is two types of noise sources or ways for noise to find its way to your radio:

1. RFI, radio frequency interference, which is radiated noise. Radiated noise can travel long distance and is an example of the signals you want to receive.

2. EMI, electromotive interference, which is conducted noise. As separate local electric and magnetic fields the energy falls off rapidly over distance. A few feet can make a big difference in noise level.

If the problem electronic device is radiating the noise (RFI) then how much it bothers your reception will be determined by how much noise it generates and how efficiently it radiates that noise. Generally the dimensions of the device mean that any radiators in the device will be electrically small and the efficiency the device to radiate noise energy will be poor. The result is most of the noise energy will become localized electric and magnetic fields known as inductive fields as opposed to what is know as a far field EM wave. The radiated EM wave has a special relationship between the electric and magnetic component fields that allow the long distance propagation to occur. The localized electric fields tend to spread out more than the magnetic fields in the low dielectric air and the majority of non metallic house building materials slow them down by tending to bend them but don't stop them. The result is that the inside of most homes are much noisier inside then just a few feet outside most structures.

So you can draw several conclusions from this such as that the local noise field energy will fall off rapidly over distance from the noise source. This means that you can reduce noise by moving a portable radio or antenna farther away from the source. Antennas that are sensitive to the magnetic component and not the electric component on the EM noise fields will fare better than an antenna that is an electric field type in the area of local noise sources. A common mode electric field antenna will the worst performing antenna around local noise sources.

If the main noise generation is EMI meaning that the noise is conducted down the power cord into the AC mains supply then several things can happen:

A. If you plug your radio into the AC mains supply then the noise goes up the radios power cord and is conducted into the radio.

B. In addition to this direct conduction if you have an external antenna connect by coax cable this noise can be further conducted on the outer shield and then transfer to the antenna as common mode energy.

C. Noise that starts out as EMI in the mains AC supply now has found larger radiators, which is the wiring in your house and then can radiate more efficiently becoming RFI.

"C" can be an especially insidious problem to solve.

Strategy to follow to reduce local noise:

1. Put as much distance as you can between the radio, antenna and the local noise sources.

2. Use an antenna type sensitive to the Magnetic component of a EM wave.

3. Use RF chokes on noise source device power cord and other cables.

4. Turn off and actually disconnect electronic noise sources.

5. Identify troublesome noise sources by unplugging or disconnecting everything in the house and turn them on one at a time after a scan on the radio.

6. Use chokes on the coax to the antenna or choose a lossy RF path for the coax such as putting it in the ground on its way to the antenna from the house.

7. Locate external antennas away from power lines, the house and neighbors homes or other noise sources.

I'm not the only one who thinks so. Bob Schieffer was asked in a Saturday interview with WABC's Mark Simone whether Bob thought bin Laden had expressed "almost the same" sentiments that Kerry did, and Schieffer replied, "Well, he did. That's exactly right."

The reference was to Kerry's "There is no reason that young American soldiers need to be going into the homes of Iraqis in the dead of night, terrorizing kids," in December on Face The Nation; and to bin Laden's referring to "the oppressive measures adopted by the U.S. Army and its agents".

If I remember, Schieffer is not exactly a Republican.

As a novice listener I advise you to look for a different radio. The controls are not intuitive and it would probably take me a while of operating that radio to get the most from it. If you like tweaking the radio then don't let this stop you. Some people like to play with the controls and some don't.

If you spend more time listening to utility/ham/SSB than SW broadcast then again you might consider the R75 but on the other hand if your interests go the other way then consider another radio with better sync, AGC and audio characteristics.

Importantly if you decide to get the R75 make sure it has all the latest of the "mods" for the AGC, sync and audio. These "mods" either fix or improve problems with that radios performance. Also this radio has an optional DSP module. I would want that in the radio. If it has all this stuff and is in good alignment and physical shape and your listening interests support it then consider it.

One more thing, the speaker is small and poor sounding so expect to use headphones or an inexpensive external bookshelf speaker with it.

Please post to the news group about what you get and how it works out for you. Any table top radio will be a big step up from portable performance with a outside antenna.

Good luck with your purchase and good listening to you.

Yeah we have had some strong winds around here in Ventura.

The low bands do better with lower Sun activity we have had recently.
This is also winter in NA, which also favors the lower bands. I don't
pick up much these days on 13 meters (21, 400 KHz to 21,900 KHz) but 16
meters (17,480 KHz to 17,900 KHZ) and the other bands on down has been
pretty good.

Communistic and socialistic thinking is not compatible with human
condition period.

Communistic and socialistic governments continue to be used by regimes
and dictators to oppress people and direct any of the wealth generated
to further nefarious purposes in the world or they just blow it on the
elite class.

Worse yet are the elitists in this country that don't appreciate the
freedoms we have in this country and unthinkingly are tying to bring
about change in that direction.

> should know?

Hi Brad:
Often I check the broadcaster's website to see if they have an online form for reception reports. I have submitted online reports to Radio Taiwan Intl and Radio New Zealand Intl. I have sent email reception reports to the Voice of Russia, Radio Havana Cuba, and several other stations I can't remember right now. Finally, I have used postal mail to send reception reports to a few stations in the United States (where I live).

I prefer to use SIO codes because I have not really learned how to devise a SINPO code.

Aside from that, you are probably more knowledgeable than I am about writing good reports. For other readers of this thread, it's always good to name your radio receiver, any antenna that you're using, your listening location, and the source of any interference you hear, if you can track it down.

Regards,

> give me an idea of what to make.

Cheap and easy to make is a folder dipole antenna out of 300 Ohm
twin-lead cable from Radio-shack. You can get 50 feet for $7.99 as an
example.

<http://www.radioshack.com/product/index.jsp?productId=2049617&cp=&kw=30
0+ohm+twin+lead&parentPage=search>

You don't need that much so if you find a smaller length for less buy it.

You use this to make the antenna and it also is the lead-in to the
radio. This stuff is plastic insulator with a wire down each side.

1. Using a tape measure cut a piece about 57 inches long.

2. Trim the insulation on one end exposing the two wires and twist them
together.

3. Do the same for the other end.

4. Now using the tape measure find the center of this piece of cable
and cut just one of the wires. Either one will will do. Just cut the
one wire and not the rest of the insulation. Trim the insulation back
along the cut wire from each side of this cut a little more than the
width of the cable.

5. Trim the end of the remaining long piece of cable and twist the two
wires of it to the two wires you exposed on the side cut you made on
the 57 inch long piece. Twist together one wire from one side of the
long piece to one side of the center cut.

Tracing what was done, the left side of the long piece is twisted with
the left side of the center center cut, which goes to the left end,
across the left twisted wires, then across the top, then through the
right side twisted wires, then back toward the center cut where the
right side of the cut wire is twisted together with the right side of

the log piece.

The junction of these two pieces look like a 'T".

This "T" shape is the broad side of the antenna and you want this broadside to face the direction of the station you want to pickup. Use a supporting wall that best accomplishes that and mount it with tape, thumb tacks, tie wraps or something else along those lines. The higher the antenna is mounted the better. Keep the antenna away from metal window frames, screens and that sort of thing.

If your place has aluminum siding you will have to put the antenna out side away from the siding. In that case it could go in the attic strung up with string, nylon fishing line or tacked to the rafters so it faces the right direction.

That will only work with the radical liberal left crowd and not the
majority of Democrats. It's a loosing strategy and most Democrats will
end up voting Republican if it does not stop.

I think we're confusing EMF (Electromotive Force), also known as Voltage
with EMI (Electro magnetic interference).

Good posting, though...

You tested them, hated them, then bought two. So who is the real
"Tennessee Trash?"

The radio isn't perfect by any stretch -- not by a long shot -- but it
is one of the nicer radios I've had the pleasure of playing with. It
does exactly what I wanted it to do.

** CUBA [and non]. 2 in spy case enter not-guilty pleas
Posted on Fri, Jan. 20, 2006 U.S. & CUBA
http://www.miami.com/mld/miamiherald/13666547.htm?template=contentModules/printstory.jsp

A couple at Florida International University charged with being covert agents for the Castro government pleaded not guilty in Miami federal court. BY JAY WEAVER

A pair of Florida International University employees pleaded not guilty Thursday at their arraignment in Miami federal court, and their lawyers later decried their detention in solitary confinement as pretrial punishment.

The couple are accused of operating as covert agents for Cuba's communist government for decades, using shortwave radios, numerical-code language and computer-encrypted files to send information about Miami's exile community to Cuban intelligence commanders.

Carlos M. ï¿½lvarez, 61, a tenured professor, and his wife, Elsa Prieto ï¿½lvarez, 55, a mental-health counselor, were denied bond on Jan. 9 by U.S. Magistrate Judge Andrea Simonton. The South Miami couple are charged with failing to register with the federal government as foreign agents.

If convicted, they face up to 10 years in prison.

FLIGHT RISKS

Last week, Simonton said she believed that the gravity of the charges against the Alvarezes, their past academic trips to Cuba and their contacts in Fidel Castro's government made them flight risks if they were released on bond.

Their attorneys, Steven Chaykin and Jane Moscowitz, said Thursday that ``their presumption of innocence has been eviscerated.''

This is not the first time at least one of their names has surfaced in official investigations into the Castro government's alleged spying in South Florida.

Congressional testimony by Florida Department of Law Enforcement agents in 1982 attempted to link Elsa Prieto ï¿½lvarez to the Antonio Maceo Brigade, founded in the 1970s by young Cuban exiles who often split with their parents and supported the Cuban revolution.

The agents said Elsa ï¿½lvarez had been identified as a member of the brigade by the Rev. Manuel Espinosa, a Hialeah preacher and self-proclaimed double agent, who died in 1987.

But on Thursday, her lawyer strongly denied that allegation. ''She was never a member of the Antonio Maceo Brigade,'' Moscowitz said.

Andrï¿½s Gï¿½mez, the longtime brigade leader, told The Miami Herald that Elsa Alvarez was not a brigade member -- although he did not rule out that she may have attended a brigade meeting or taken a trip to Cuba with the brigade from some other U.S. city.

During the 1982 congressional testimony, the FDLE agents also warned the federal government that several Cuban exiles, including Elsa ï¿½lvarez, were providing sensitive information to Cuba's government just as Miami was struggling to absorb more than 125,000 Mariel refugees, hundreds of them prisoners with serious criminal backgrounds and patients with severe mental illnesses.

TESTIMONY

Testifying before a U.S. Senate subcommittee investigating Cuba-related terrorism in South Florida, Sergio Piï¿½ï¿½n, then an FDLE agent, accused Elsa Alvarez of sending along to Cuba private information on mentally ill patients at Jackson Memorial Hospital.

Moscowitz denied that her client had access to Jackson records or that she had passed along such information to Cuba.

The couple's attorneys sharply criticized their clients' detention before trial. They said they will appeal the denial of bond and challenge their solitary confinement in the Federal Detention Center in downtown Miami. The ï¿½lvarezes are on paid leave from their FIU jobs.

''We think they are being inappropriately detained,'' Chaykin, who represents Carlos ï¿½lvarez, said after the brief arraignment. ``They are being punished for a crime they were not convicted of.''

Moscowitz said it has been particularly hard for her client, Elsa ï¿½lvarez, to be separated from the couple's 12-year-old daughter. ''She is in distress,'' Moscowitz said. ``But somedays she is full of fire. She is ready to fight.''

Their indictment, which included no mention of top-secret U.S. government information being disclosed, came months after the couple's admission because of additional investigative work in the case, interim U.S. Attorney R. Alexander Acosta said.

Their confessions were videotaped this summer, according to one law enforcement source familiar with the case.

But the couple's attorneys dispute that claim. They said that some of Carlos ï¿½lvarez's statements may have been videotaped by the FBI, but that Elsa ï¿½lvarez's statements were not recorded in any way.

If you want to buy new then you are limited to:
AOR 7300
Icom R75
NRD-545
Ten-Tec RX-340
Ten-Tec RX-350
Palstar R30 and it's variants (dependent on the filter choice)
Yaesu FRG-100

Of these, the Icom, Palstar and Yaesu are in the same price class
around 600 dollars, the others range from 1200 - 1800 dollars except
the RX-340 which is a bit over 4000 dollars.

Having gone through this decision myself the first thing I did was to
think about how much of my budget I wanted to put into the hobby and
that left me looking at the 600 dollar range. Was looking at the
Yaesu and Icom and was hard pressed to decide which to buy - ended up
with the Icom as I was able to pick one up that had been traded in
when the owner bought the RX-340. For the less than the Yaesu the
Icom had the extra filters I wanted (at the time - would consider
replacing the narrow with a wider filter for program listening), the
KIWA mods were done and it had the voice synthesizer. I've been happy
with it and will also testify that Telamon's comments about it are
valid - had I not been aware of the audio issue I would've been
disappointed with the radio. The manual is not very well written in
terms of explaining how to use some of the menu items and controls;
there is a Yahoo Group for R75 users (and is open to all) and you can
find decent support from folks there to compensate for the manual.

If you are okay with buying used try to find a Drake R8 series, if
somebody is willing to sell one 8-} Perhaps a JRC 515, 525 or 535 -
perhaps somebody familiar with those could comment on which is the
best to look for.

Hope that helps.

2499. Re: wanted to buy

Newsgroup: rec.radio.shortwave
Date: 2006-01-22 03:35:49 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-DE3E10.19354821012006@newsclstr02.news.prodigy.com>
Source record: 59247

I didn't mean to put you off on the R75.

I'm not saying go buy this one because I don't know the specifics on it
but at Universal web site. Here is a Demo unit

<http://www.universal-radio.com/alert.html>
D931 *ICOM R- 75 DEMO COMM GC DIG 0.3-60MHZ ORIGINAL
559.95 NEW ORIGINAL WARRANTY

A new R75 from them is only $10 more with a free DSP module.
<http://www.universal-radio.com/catalog/commrxvr/0175.html>

and for new go here to see current tabletop radios.
<http://www.universal-radio.com/catalog/commrxvr.html>

I can recommend a AOR 7030+, Drake R8B and a Ten-Tec RX-340 because I
own them and they are great SW broadcast listening radios but they are
much more expensive than the R75. The Drake R8B is discontinued now so
you will have to buy it used. Universal doesn't have any used ones right
now.

The Yaesu FRG-100B and the Palstar are more in the R75 price range.

If I was you I would go read some reviews on the web.

US Navy captures suspected pirates off Somali coast

"DUBAI (Reuters) - U.S. Navy vessels pursued a suspected pirate ship in the Indian Ocean off Somalia's coast and fired warning shots to capture its crew on Saturday, U.S. Navy Forces Central Command said."

<http://news.yahoo.com/s/nm/20060121/wl_nm/somalia_pirates_dc>

This is a follow up to a story I heard on RA about Australians on a cruse that were shot at when their captain decided to make a run for it to open seas. The ship took some damage but no one was seriously injured.

Amused? Hardly.

The Ana Belen Montes case was certainly more significant.

As a volunteer on several mountain-top repeater sites, I'd just like
to say that that is bull. Polyphaser and I.C.E. have good designs.
Other companies don't. I suggest you use Google to look up posts by
one Gary Coffman to explain the science behind it.

I think you're better off starting on the right foot and then
expanding as you go along. Start with a Polyphaser and a good ground
line. Then add the rest as you go. A ground window is nothing more
than a conductive plate -- get a sheet of aluminum or copper
elsewhere. Use copper flashing for strap. But don't confuse
Polyphaser for some Mississippi junk or greek-letter junk -- they
aren't in the same league.

OBTW, do your TV stations go off the air in lightning storms? The
ones here (excluding one *very* poorly run one) do not. Commercial
stations? nope. There's a reason for that -- they get hit all the
time, but their grounding systems handle the strikes just fine.

The couple are accused of operating as covert agents for Cuba's
communist government for decades, using shortwave radios, numerical-
code language and computer-encrypted files to send information about
Miami's exile community to Cuban intelligence commanders.

Okay, so I was looking at the ICE model 300/U at
http://www.arraysolutions.com/Products/ice/impulse1.html.

There, it is stated that the device "may be mounted on flat surfaces,
grounding bulkheads, or through-mounted using dual stainless steel
grounding screws for mechanical fastening."

So, in the last specified installation method -- "through-mount[ing]"
w/the grounding screws -- are we basically talking about the same sorta
installation as we would do with a Zap Trapper or Transitrap (i.e.
connecting the grounding wire to the device at the grounding screws)?

Sorry if this is a stupid question; would just like to confirm whether
I've got this right or not, since I'd rather not purchase something
that my present listening location would prevent me from being able to
appropriately install.

Thanks again,

Junius

Ha! I remembered everything except to tell them my receiver and
antenna!

I was unable to find anything on their website. It seemed that the only
contact information was for me to contact them, preferably with cash,
and they would send me a prayer.

Thanks
Brad.

Everyone assumes Coulter is nuts, so she isn't all that important.
Quoting Coulter makes as much sense as quoting Human Events or Newsmax.
Hannity, on the other hand, is a problem. This water boy reads faxes
from Rove all day long, the regurgitates them over the airwaves. The
Out Foxed movie demonstrated that even when you inform Hannity of the
truth, he will repeat the lies the next day.

http://www.newshounds.us/
is a good way to keep track of Fox and Fools.

I rather take my chances with a terrorist attack than be a good little
brown shirt living in a GOP fascist police state. These chicken shit
GOP voters are not worthy of being called Americans. Democrats say
"give me liberty or give me death", and Republicans say "give me a
cavity check."

David wrote:

Either the Polyphaser or the I.C.E. can be connected to a ground line.

It's just that the quality of the ground line is a huge factor in the
safety of the system. A bulkhead point ground -- called a ground
window -- is the best. Next best is a ground strap. Why? Because
lightning is mostly RF and is subject to "skin effect" -- that is, it
travels mostly on the surface molecules of a conductor. Strap has the
most surface of any kind of wire. A controversial choice is braid,
but I won't go into why here because it's a long diversion. Last is a
simple copper wire to your ground -- in your case, the cold water
pipe.

Bottom line: Given the same type of ground (in your case, a wire),
the Polyphasers and the I.C.E. will outperform the others.

Go ahead and use an I.C.E. or Polyphaser with a ground wire.

Eric

I've received QSL cards from Radio Sweden, Czech Republic, Radio Canada International, Osterreich 1,
VOA, Deutsche Welle, Radio Havana, China Radio International, R. Serbia/Montenegro and others by
submitting e-mail or web form reception reports.

http://www.eibi.de.vu can link you to station addresses and show you website info if the station has
an online presence. Not all of them do, and not all of them respond with a QSL card if a report is
submitted online or by e-mail, but I've had pretty good luck that way.

RCI is a good place to start. http://www.rcinet.ca/rci/en/rapport.shtml

2525. Radio Tashkent has ceased shortwave transmissions?

That's good to know. I listen to China Radio Intl occasionally and
would like to get a QSL card from them. It seems like I sent them a
reception report last summer or fall, but I didn't receive anything.
I'll try again.

I would suspect that their 21.470 is beamed for Caribbean consumption during daylight hours.
That and places in the Southeast US. It might be capable of reception in Ohio but probably best with a decent portable and 10 to 30 foot wire antenna.

You have a choice. You can listen ''free'' (most days) on a $500 radio with a 50 foot antenna, or, you can listen for $13/month on a $20 dollar radio with a bean bag size antenna.

The content is the same, but there's big difference in audio quality and link robustness.

There are at least 2 kinds of shortwave listener. One just likes fishing for stations and doesn't care abgout content. The other is interested in the voices from afar. Some of us are a little of both and have the widest possible range of receiving options.

Source record: 59089

RYAN [KC2LKS],

The Sony AN-LP1 Active Shortwave Loop Antenna requires it's own
built-in {Set-of-Batteries} Battery Power to Opperate. The Radio
simply supplies a small 'sensing' Voltage to only "Switch" the AN-LP1
On-and-Off; and nothing more.

NOTE - This Switching Voltage from the Radio does NOT supply the needed
Power to actually Power the Sony AN-LP1 Active Shortwave Loop Antenna.

TESTING :

1. Take the Batteries out of the Sony AN-LP1 Active Shortwave Loop
Antenna and plug the Sony AN-LP1 Active Shortwave Loop Antenna into the
Sony ICF-SW7600GR AM/FM Shortwave Radio. Turn the Radio On-and-Off and
find-out for yourself.

Disconnect - Un-plug the Sony AN-LP1 Active Shortwave Loop Antenna from
the Sony ICF-
SW7600GR AM/FM Shortwave Radio.

2. Then put the Batteries back-in the Sony AN-LP1 Active Shortwave
Loop Antenna
and plug the Sony AN-LP1 Active Shortwave Loop Antenna into the Sony
ICF-SW7600GR AM/FM Shortwave Radio. Again turn the Radio On-and-Off
and find-out for yourself.

Well, my point was that if there is no ground nut on the Polyphaser,
there are other options that do not require going through an
expensive, bothersome-to-set-up grounding plate. The ICE device has
grounding nuts for a wire. I know other brands do, too. Whether they
are junk or not is subjective opinion.

I still say the best option, for a casual listener with limited funds,
is to simply disconnect the antenna, the ground wire and the power
line, depending on how stormy the weather is. The lightning arrestors
are pretty, and look neat, but a bolt of lightning can go through them
easily.

If an arrestor it is to be, I notice http://www/thewireman.com has the
ICE arrestors with a device to attach them directly to a ground rod.
(Good place to buy antenna stuff.)

In and about the Saturday, January 21, 2006 and prior about 5 days this companies subsidiary,:Has violated

1. :fault element for a particular physical element may be intention, knowledge, recklessness or negligence.
2. has intention with respect to a result if he or she means to bring it about or is aware that it will occur in the ordinary course of events cause me harm.
3. Is a person has knowledge of a circumstance or a result if he or she is aware that it exists or will exist in the ordinary course of events.
4. He is aware of a substantial risk that the circumstance exists or will exist; and
(b) having regard to the circumstances known to him or her, it is unjustifiable to take the risk.. A person is reckless with respect to a result if: (a) he or she is aware of a substantial risk that the result will occur; and (b) having regard to the circumstances known to him or her, it is unjustifiable to take the risk.
5. He is negligent with respect to a physical element of an offence if his or her conduct involves: (a) such a great falling short of the standard of care that a reasonable person would exercise in the circumstances; and
(b) such a high risk that the physical element exists.

I bring this matter to your urgent attention as this company is jeopardizing the life of a minor and maliciously causing me irreparable harm. I seek a prompt investigation into the matter.

INVESTIGATION ABSTRACT

I have a google site, a myspace site a tagworld site and an Ebay site directed towards the location and reunification with my minor Australian Child and her siblings in the United States.
To defray the costs of my upcoming litigation I have asked for donations, where a concerted effort is being put in by the Australian Government to continue to violate a Supreme Court order and Human Rights Direction.

All the sites have and will continue to carry data on my child and I have posted this data for her location.

There are costs to the Private Investigation firms projected.

This American Broadcasting Company has knowingly and maliciously broadcast against me.

Stating that I am spamming for money from India. I have companies in India.

They have broadcast other racial and slanderous things in this broadcast.

I have given then them notice of litigation pending.

JUGVIR INDER SINGH

Thanks for the info, SB. Last night I heard some shrimp fishermen around 6.6 MHz USB (using USB is a no-no because of other traffic -- like long range air traffic control! -- utilizes that mode there) in the Gulf of Mexico (I think) who were apparently using that area of the HF spectrum instead of legal marine frequencies to thwart eavesdropping of other fishermen finding out where they were successfully catching.

I also think I may have heard Jamaican drug smugglers chit-chatting, too, but they were very difficult for me to understand.

Stay tuned!

Starsky

If it's true as the OP mentioned in an earlier post, his wife has money, why not just hire a guy with a cherry picker to do the installation, thus sparing everyone that knows you?

2555. Lightning rod as antenna

Newsgroup: rec.radio.shortwave
Date: 2006-01-22 16:15:38 UTC
From: hawgdawg <hawgdawg01@aol.com>
Message-ID: <1137946538.361032.84560@f14g2000cwb.googlegroups.com>
Source record: 59152

I have always been intrigued with shortwave listening, but don't know much about it. I recently built a house out in the country and find that reception of virtually everything is better than in the city, so it's time to get serious. The house is high up on a hill and I can see the horizon in virtually all directions, so there's not anything visible blocking signals.

Because of our weather here (eastern Nebraska), it was highly advised that I put in a lightning arrest system in the attic. There's at least a couple hundred feet of 3/4" braided solid copper wire tying 13 lightning rods together going up through the roof. The whole thing is grounded in 4 places around the house with 10' copper ground rods. The wiring is in every peak and valley in the attic, so it has exposure to all directions at just about every angle imaginable.

Question is, can this array of wiring be used as a shortwave antenna? I know there's a lot more to reception than just a bunch of wire, but it sure seems like a waste not to use it if possible. If it can't, I guess it's a pretty short discussion, but if it can, how would I connect it to a radio (the radio is the next project to figure out which one to get).

I know you probably get a lot of stupid questions, but if you can lead me in the right direction, I would be most appreciative.

HawgDawg

Try this next time, it might be different than what you used before, and I got
an e-mail back saying the QSL would be mailed. Report was sent June 30, QSL received July
25.
crieng@cri.com.cn
I had heard the Noblejas, Spain relay but failed to request they verify the transmitter.
Wish I had,
just
in case they would have put it on the card.

> Question is, can this array of wiring be used as a shortwave antenna?

The problem is that it's a big ground system and it all terminates to earth ground and all that ground and wire will not make for an effective ant. Sure you'll receive signals but its a ground system and not an ant. Put up 75-100 feet of wire. If your radio is like mine it will accomadate two ant. I run one wire north to south and the other east to west and I just pic which one gives the best reception. You should do a little googling for info on anttennas. It's worth it to educate your self in more detail on the subject.

> are junk or not is subjective opinion.

Actually, not. They have been tested against each other, and one
particular brand is actually harmful -- that is, its design will
INCREASE the chance of damage to your equipment.

BTW, Polyphaser has a bolt that can be used to secure a ground wire --
it just happens to be there primarily to be bolted to a ground window
instead.

>
> I still say the best option, for a casual listener with limited funds,
> is to simply disconnect the antenna, the ground wire and the power
> line, depending on how stormy the weather is. The lightning arrestors
> are pretty, and look neat, but a bolt of lightning can go through them
> easily.

...and I'm saying this isn't so. Lightning behaves in many
counterintuitive ways, but it is just a short, high-duration, damped
RF surge. If your system can handle the current for the short
duration, you're fine.

I speak from personal experience. From repeater sites to my car
(which, yes, does have Polyphaser protection in it!), the antenna and
coax are toast from the strike, but the radio gear survives intact.

Again, this is why commercial sites and broadcasters use Polyphaser,
and are rarely taken off the air by the many strikes their towers
take.

True, but they also have ground systems in place, designed by
engineers and costing tens of thousands. Not many swls or hams (myself
included) are all that expert in installing a foolproof ground setup.

I have just sent my p/w request. The last two took 5 hours and 14 hours respectively. Though others got theirs within seconds/minutes

Oh, so you *do* need a subscription. That's what I thought. Oh
well...there goes that idea.

And just so you know, it's trivially easy to find a real radio that
costs less than $500. Just go to Universal Radio's website....there are
tons of them. Amazon.com is another place you could check, or ebay for
that matter.

>

Right, I guess the audio quality must suck with those dropouts
occurring all the time.

If you think these are the only kinds of listeners, you haven't been
listening very long. I suggest that, instead of listening to the
"voices from afar", you get some help for those voices in your head.

Interesting idea.
But I've never noticed the noise change character.
One would think that a VGA display would be
turned off occasionally.

The noise is unchanged even if my monitor is
unplugged and every circuit breaker in the house, except
for that of the radio, is switched off.

If it is from a display it would have to be from
a defective one. Every display has a horizontal
in the tens of kHz range. We are not inundated
with display noise.

I suggest you learn to read.

I said ''at least''. You read ''only''. That's a troubling
disconnect from reality.

Thanks for confirming your reception. I tried both 7545 and 6280 at
2000 UTC and unfortuantely didn't hear even the faintest murmur. I'm
curious if anyone on the U.S. west coast is receiving it. I'll email
their engineering director.

The Palstar R30C, Yaesu FRG-100 and Icom R75 are all around $600 new.

There are several nice condition Icom R71 radios on Ebay in the $300 to
$350 range. Currently no R75's on Ebay that I see or at Universal used
page except for the one demo unit for $10 less.

<http://electronics.search.ebay.com/Icom_Shortwave-Radio_W0QQbsZSearchQQc

51QQsadisZ200QQsaprchiZQQsaprcloZQQsaslcZ2QQsbrftogZ1QQsofocusZunknown>

There are some Drakes on Ebay. An SW8 might be a good choice and there
is an R8 and R8A for sale all currently under $500.

That's a typical liberal. "Hurt my country all you like, we won't bother you because we need the money for entitlement programs." Don't let that part about "provide for the common defense" get in the way of the part about welfare.

> These chicken shit
> GOP voters are not worthy of being called Americans. Democrats say

My first "real" radio was an R75. Even with the Kiwa mods and the DSP unit I found it to de disappointing. I eventually sold it and bought a Drake R8B.

I think the Palstar would be a good "starter" tabletop. If you decide to get an even more high-end rig later, the Palstar would be great for DXpeditions or other semi-poriable use. I've even considered getting one just for the portability, but I've heard that Palstar might come out with a new receiver this year so I'm holding off.

Looks like the search page results link is to long for my news reader to handle but you can do your own search on Ebay.
<http://electronics.listings.ebay.com/Radios-CB-Ham-Shortwave_Shortwave-Radio_W0QQfromZR4QQsacatZ15051QQsocmdZListingItemList>

Just use the search box to the left of the Shortwave Radio drop-down menu using "Drake" or "Icom" as examples.

It's very annoying to see about half of what Alex Jones predicts turn out to be true. He railed against Clinton, but he didn't realize the Bushies were the ones that hate freedom. Mama Bush hates freedom so much that she invests in those private prisons. The Bush family only uses America as a source of power and money, otherwise they hate this country. It's a Bush tradition starting with Prescot Bush, banker to the Nazis.

I haven't had my hands on a R75 in any condition but you would think
that with the mods and DSP it would be a decent radio.

Out of the table top radios this is the only one that "appears" to me
that people would possibly have a problem operating. With a non-standard
AGC control setup on small concentric knobs I could see people turning
the wrong control by mistake. That together with the dual bandpass
control you could have the radio sounding very poor in short order.

With the mods the AGC and sync are supposed to be working with a visual
indication of when the sync is trying to lock and that should have been
a help and the audio is supposed to be improved.

What disappointed you about the R75? Was it that the audio was still
sub-par even with the mods and DSP? To tricky to operate?

Unfortunately, all too many liberals vote Democratic because they vote
Democratic. (That somehow makes sense to them.) Voting Republican is
somehow abhorrent to them, but they couldn't tell you why other than
that they vote Democratic because they vote Democratic.

Plus the dead always vote Democratic, and the unregistered voters always
vote Democratic, and the winos on buses always vote Democratic at every
stop, and the imaginary people always vote Democratic, and so on.

My disappointment with the R75 probably had more to do with my
unrealistic expectations about the receiver than anything else. First
of all, I got into shortwave largely for broadcasting listening, which
is something that the R75 is simply not well suited for, especially out
of the box with its narrow filters and practically non-existent synch
detector. I had all of the Kiwa mods done and I did not find them to
make that much of a difference in terms of improving broadcast
listening. The synch, in particular, was barely better after the mod.
However, this was a few years ago and I think that there is a new
version of the synch mod available from Kiwa that is much better than

the one performed on my rig. I didn't find the audio to be much improved, even with an outboard speaker. I thought the manual was poorly written, but I got a much better grasp of the functions after reading Harry Helm's shortwave handbook. I bought the R75 when the R8B was still on the market, and I thought long and hard about what I should buy. In the end, I tried to save some money by choosing the R75 with the knowledge that I would probably have to put out some more cash for the mods. For my taste, the money I saved wasn't worth the diminished experience. I sold my modded R75 on eBay for a good price and bought a R8B about a year before it was discontinued. It was everything I wanted in a receiver and more. I was worth every penny. I thought it was so much better than the R75 in every possible way, except for maybe the tuning knob.

In today's market, with the R8B long gone (except for used units), the R75 is much more attractive IMO. If the mods have improved, as they seem to have been, then that makes the R75 an even better option. I should say that I also have an NRD 545, and that I have not found it that much better than my R75 was, especially for $1,000+ more. I know that the R8B vs. R75 debate has been well-played out here (I've read all of the old threads that Google has archived) and that the debate is often emotional. For my own tastes/preferences the Drake is far superior to the R75. On the other hand, I can see why so many people hold the R75 in such high much esteem, especially considering its price-point. Its strengths are even more amplified in today's tabletop market. In the end, the R75 just wasn't for me.

Thanks for writing about your experience with the R75.

The Drake R8B certainly a great rig and I enjoyed the R8 also when I
owned it previous to the R8B.

It's such a shame the R8B is not in production as it has most features
that people want for any kind of short wave listening. The Drake
equipment lives up to its specifications and works as you expect it too
out of the box.

Currently there is a used Drake R8 and also a R8A that is under $500 on
Ebay. The R8A is more money than the R8 but it has an improved sync and
ergonomics over the R8. The R8 delivers solid performance though.

Before I bought a R8B, I suspected that Passports claim that, "...the R8B is the only non-professional receiver tested that gets everything right...," was hyperbole. It turns out they were dead on with that statement. I agree with your assessment about the R8B. I don't know if there has ever been a more well-rounded receiver. I've told my wife that if the house catches on fire, I'm saving (1) the R8B, (2) her, and (3) the cats, in that order. I'll go back and get the 545 if it's convenient to do so. I should really qualify my disappointment with the 545. Compared to the R8B, it not a good broadcast rig. It's main problem is that there is only one AGC speed (unless you're in SSB mode) and it's much too fast. The DSP features like the fully adjustable filter, automatic notch, digital NR, etc... are nice, but I've never picked up a station on my 545 that I couldn't get on my R8B sans all the bells and whistles. I think that if I did some more utility/SSB stuff, the 545 might pull ahead there because the DSP can really clean-up those kinds of signals. One of the major reasons I haven't sold it is that I have the wideband board installed, and it's a surprisingly sensitive wideband rig. I have an AOR discone up on the roof and the two play well together. The major drawback is that the 545 wideband option suffers from a TON of birdies. Oh...it's also a damn good looking rig and its silky-smooth tuning knob is a joy to use, but it ain't a Drake by any stretch.

You should buy a good signal generator for testing. That way you can provide real numbers and not "sucked on every antenna". Maybe all your antennas stink? How should we, or Ten-Tec, know?

One detail I've never seen described is the attachment of the copper
(flashing) strap to a ground rod. Is it adequate to simply tie it in
place with wire or perhaps wrap it around about 270 degrees and clinch
it with a couple of bars and some sort of anti-oxident?

A controversial choice is braid,

You didn't say "to get them fixed." You said, "They "Sucked" at Ten
Tec on their antenna as well while I was there!"

> Better go get your
> dyslexia fixed you fucking retard!
>
>

I think you are the "retard." You either

1) Bought two $4000 radios WITHOUT TRYING THEM FIRST,

...or...

2) Tried one, didn't like it, THEN BOUGHT TWO.

Which is it? I have your full messages from before, so don't try to
twist it 'round.

...and you have the gall to compare it against an ICOM PCR-1000 or a
YB???? I don't think *I*'m the clueless one here. Even a mediocre
performer will outperform the PCR-1000, an unfortunate abomination
made during ICOM's "I don't give a shit" period.

Even I drove the 8 hours to spend a whole day with the '340 before plunking my money down. Only a damned fool drops that kind of money without taking a test drive.

It doesn't take much money. It DOES take a completely anal attention
to detail.

I guarantee you I don't have tens of thousands in my ground system,
but I trust it against a direct strike and have experienced many close
(less than 500 feet) strikes near my home and one direct hit on my
car. All radio gear made it (except the stereo in the car, but it
wasn't behind a Polyphaser).

I've got a Kiwa Modified R75 connected to an Antenna Supermarket
Eavesdropper Dipole.
The antenna runs East to West.
I'm thinking of putting up another antenna running North to South.
What do you all suggest as a good compliment for my existing antenna?
I'd like something that will pull in the stations that now come in weak or
with interference.
How bout just a simple long wire?
Could you give me some tips on how to build one?
What coax should I use?
What antenna wire should I use?
How do I make the connection between the two?
How long should it be?
In the mean time, I'll do an internet search for antenna building tips.
I'm sure there's a ton of info out there.
Thanks all.
Lenny

I've tried clamps, with less than great success.

The "official" way to do it is to use an exothermic weld -- a small
thermite burn contained within molded clay around the ground rod and
strap to melt the two into each other. This has the advantage of no
welding material to break, and it's actually cheap.

Go get another Eavesdropper and mount it north/south. If you do not have the room, mount it as an inverted V. Heck, mount them both as inverted V's, one east/west and one north/south, than switch between them as needed. Run coax from each to a switch at your radio.

My opinion is you should have asked the question before bidding,
though it's not like I've never purchased something without fully
researching in advance. So, Pot ..... meet Kettle and it's time to
help you move forward.

Not having any direct experience with the radio I cannot offer any
firsthand observations. There are folks who swear by this radio; they
have modified it though and you may wish to view those and see which
of them seem important and are within your technical reach to perform.
You can find reviews on e-ham, not that e-ham is the ultimate source
of radio wisdom but it will give you an overall idea of what you will
soon have. The overall opinion seems to be 'okay for the cost' -
check out the reviews here: http://www.eham.net/reviews/detail/2108
You can pre-read the manual here:
http://esrman20.tripod.com/dx394/
You will find mods here (a couple of the folks listed on this page
make appearances here when a good thread gets going, you may end up
hearing from them):
http://www.monitor.co.uk/radio-mods/dx-394/dx-394.htm

Hope this helps get you started, and of course I must add the
obligatory line....."make sure your antenna is as good as your
housing situation allows."

I tested the AC-DC adaptor on a handheld Casio TV. It didn't work either, though its plug fitted perfected and it was tuned to the correct voltage. Guess the adaptor's faulty??

Small U-bolts from the hardware store would be one way to go.

I personally use inexpensive hose clamps like you see on car radiator
hoses. I doubt they meet "code" but they work for my purposes.

That is pretty slick. After a few moments hesitation re: googling
the word thermite, (but dammit, that would be letting the terrorists
win,) I found a couple of interesting video clips and the Cadweld
website http://www.erico.com/ which offered ceramic and graphite molds
for a variety of similar applications. What type of clay that would be
appropriate here?

Numbers stations are not the only way they are communicated. The BBC used
to carry messages for the French underground. For example, they would listen
at the 6pm broadcast for the third story. If it had the words "cold and
rainy" for example, it was their activation code.

This has shown up in some strange places such as a Star trek Voyager episode.

It's also used for proaganda purposes. In the movie "Red Dawn" a 1980's
they communist troops took over the central U.S. paranoid fantasy,
the news from the free side included "messages for our brave freedom
fighters under communist domination" or something like that. The messages
were coded phrases.

There was no way of knowing whether the phrases were really messages
or not, but the thought that there were freedom fighters and they
were in contact with the free side was good for them and bad for
the occupation troops.

BTW, the Cuban missle crises was negotiated to a peaceful settlement
over the VOA and Radio Moscow. There was no other offical communication
between the U.S. and the Sovier Union.

Kennedy and Khrushchev exchanged several letters. Kennedy's TV address to the US was a part of the negotation process. The US and Soviet ambassadors to the UN got into a shouting match. I'm sure the embassies of both countries were quite busy during the crisis.

You can be as happy with it as you choose to be. However, if you put it up against a mil-spec receiver and say that it blows the mil-spec receiver out of the water, don't be suprised if SOMEONE out there doubts you.

(rolls eyes) Next there's gonna be someone who says that his FR-200 is a better receiver than his R-390.

The kits I've seen come with the clay, so you get it all as a package.

Do you use the hose clamps with strap, or with wire? Strap can be a
pain to deal with.

It may not be code, but it beats trying to solder. Solder and
lightning protection systems don't mix.

2649. Ferrite Choke Cores

Newsgroup: rec.radio.shortwave
Date: 2006-01-23 13:05:50 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <dLmdnfLFJMoxSUnenZ2dnUVZ_sWdnZ2d@comcast.com>
Source record: 59348

Hello:

Re thiose Ferrite Choke Cores that one sees on many AC power cords, would like to ask the following:

a. is it necessary (or a good idea) to have at both ends of the cord ?

b. besides the typical AC power line cord, would one also use it on coax ?

e.g.,:

- the Comcast broadband coax coming into the house ? (easy to get at the end going into the boxes; where would a second one be placed, if two are required ?)

- between the broadband modem and the PC ?

- between the broadband cable box and the TV ?

- **other places ?

c. can you use too many; e.g., spacing a few out along a longer run, or is just the beginning and end the norm ?

d. do these ferrites really help ? The R/S snap-on one at $ 5 seems prices; any cheaper ones that are effective ?

e. what's the theory for these things ? Do they just function as low pass filters, or are they supposed to be very lossy (also) for the higher freq's ?

Thanks,
Bob

I'm using the hose clamps with wire and braid; braid from the shack,
and a couple of 70-foot buried wires to make my 2-foot ground rod a
bit more effective (I can only go down about 1 foot & I run into
rock).

2667. Wanted: whip for Lowe HF-225 & advice on power supply

Newsgroup: rec.radio.shortwave
Date: 2006-01-23 15:05:22 UTC
From: Avery W3AVE <acomarow@usnews.com>
Message-ID: <1138028721.968987.202180@f14g2000cwb.googlegroups.com>
Source record: 59366

The 225 I just won on ebay turns out not to have the factory-supplied whip, which I'd like to have because I like my radios to be complete and because it might come in handy. Lowe no longer ships to the U.S., and I don't know anybody in G.B. who might ship it for me. Besides, shipping probably would cost twice as much as the antenna.

Any ideas for a source?

The AC adapter also is missing. What's the best way to prevent a wall wart from creating a hum problem, or should I just get a real power supply (regulated, nonswitching)?

Thanks.

Yeah.. Get a PL-259 and a piece of rod from the hardware store. Break
out that old 50 W soldering iron and go nuts.

2670. WWV receiver

Newsgroup: rec.radio.shortwave
Date: 2006-01-23 16:39:46 UTC
From: Tobin Fricke <fricke@ocf.berkeley.edu>
Message-ID: <Pine.SOL.4.63.0601222137070.21828@conquest.OCF.Berkeley.EDU>
Source record: 59369
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.homebrew,sci.electronics.design

As a project to learn more about building radio receivers, I'd like to build a WWV receiver (or maybe a receiver for the Canadian station CHU, since it's nearby and the format sounds easier to decode). I'm looking for suggestions for how to design such a radio, reading material, etc.

I was thinking it might be easier to design a fixed-frequency receiver (rather than a tunable one) because I could just select the L and C in the resonant circuit to give the right frequency. Or, since WWV is at such "round number" frequencies, maybe I could somehow use a crystal oscillator?

thank you,
Tobin

You could build a direct conversion receiver with a crystal oscillator.

You might look at the Ramsey electronics 10 MHz WWV receiver kit. It's
a pretty basic crystal controlled superhet/ceramic filter/AM detector
with AGC.

Tim.

Are you looking to decode the data transmissions or listen to the voice
signals. If the former it may take something more sophisticated
because you will have to feed a decoder.

The kool-aid drinkers are the ones who buy lies like "we're fighting
them other there so we don't have to fight them over here", but then
also react to the terror threats that we are going to get hit here.
Clearly, the neocons and DxAss are the kool-aid guzzlers.

Don't buy anything. Look around for antennas, ham radio license plates,
and search the callsign directory (www.qrz.com) for hams in your area.

Walk up to a few and introduce yourself. You may get a blank look, or a
"I don't do that anymore", or "he dosen't live here" responses but on the
whole you will find that hams a friendly bunch and will gladly show you
their shack, and if you bring a copy of your license many will let you
operate.

Once you've done that, you can find clubs to join with stations you can
use as a member, and hams that will help you learn (called elmers).

They will help you shop around and find used gear where you can look at,
see if it works and does what you want before you buy it.

If you do want to buy something the first thing I would suggest is a
2 meter handytalkie (called a walkietalkie by nonhams). From there you
can get on local repeaters and meet other hams and connect that way.

> Also, does the general license still require that you pass Morse Code
> Exam first.?? I"m hearing lots of debate over that. Thanks.

Yes. Look up Code Quick. It will teach you to copy code in a few weeks.

73,

Geoff.

First let me say Congrats

start with a 2 m Handitalkie

second try to come up with some additional money to look at multimode
radio's or other gear with SB caps you will wnat

have kept up on all therigs with multi hf and VHF (and up multimodes
since i have a one (Ft 847 was the top of the line satelite radios when
I got now it is pretty but not the best) you want to be able to seend
SSB or so called weak signal being a tech andlikely as not waiitng on
the report and order you want to have both 6M SSB and Full HF ssb that
will set you back several hunerd but you don't have to lay that out
often
>
> Also, does the general license still require that you pass Morse Code

Today as I type it this it still does, tomarrow that may change
Perosnal advice is try Morse if you haven't in the past, if it doesn't
floow well fast my advice is the wait the FCC is likely to bring it out
a new rules droping code testsing, rumor has it that that is the done
deal and they are working on some details of just what prevledges the
techs will have afterward

welcome to the ARS

that is far from certain or rather far from certain that he knows some
US hams

myself I was chating on IRC with an assuis who mentioned he was aham
discusion followed and he said some;like I know you yank a some kind of
no code License

Radio Shack still carried ham exam books in the stores (they only seem
to have the by ordering them these days) advice in the book allowed me
to find the VE session first conversation with a ham (since i gave up
many years before trying to get a novice license) was the mroning of
the test and they were not happy when I said I wasn't interested in a
code test so we said very little

About a year ago,I paid two dollars at the Goodwill thrift store for an ADi AR-147 radio.The radio was still in the carboard box with the microphone (you can look up some information at www.rigpix.com) and the radio and microphone appear to be in like brand new condition.About that time,someone in this news group said to not turn on the radio without first connecting a proper balun and a proper antenna to the radio first.Definetly find some Hams (I am not a Ham,but for only two dollars,I was more than happy to buy that radio) in your area,they can help with a lot of good information about Ham Radio.

Roughly the equivalent of the Department of Motor Vehicles requiring
prospective drivers to exhibit their skills with a horse drawn
carriage. I say roughly, because there is at least limited demand for
such skills in places like Central Park. There is no demand for a
skilled morse code operator let alone one who can barely communicate at
5 wpm.

The FCC may indeed rule, but that ruling won't change the facts!

Volunteer Examiners, or VEs.

From the FCC site...

Volunteer Examiners (VEs) are Amateur Extra Class radio operators who
volunteer their time and talent to prepare and administer amateur
radio operator license examinations. The examination for a Technician
Class operator license grant is also prepared and administered by
Advanced and General Class operators. Advanced Class licensees may
also prepare and administer General Class license examinations. A VE

is a person at least 18 years of age whose license has never been revoked or suspended. Your close relatives, however, cannot be your VEs. Each VE, moreover, has been accredited by a Volunteer-Examiner Coordinator (VEC), an organization that exists for the purpose of furthering the amateur service.

Contact a VE team in your community to make arrangements for being administered the examination elements you desire. The VE teams make public announcement stating the location and time of each examination session. If you need assistance in finding a VE team in your area, contact a VEC.

Yes, I was aware of that. I was asking a rhetorical question.

Please, try to follow the thread.

2723. ABOUT - The Antenna Supermarket Eavesdropper Dipole Antenna - An Antenna to Di-Pole For . . .

Newsgroup: rec.radio.shortwave
Date: 2006-01-23 22:01:01 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1138053661.201520.137580@g47g2000cwa.googlegroups.com>
Source record: 59421

Lenny,

ABOUT - The Antenna Supermarket Eavesdropper Dipole Antenna
! An Antenna to Di-Pole For ! {Rigging It Right!}
? Are Two Dipole Antennas better than One Inverted "V" Antenna ?

FIRST - A little something about the Antenna Supermarket
Eavesdropper Dipole Antenna "T" and "C" Models :
"T" for Twin Lead Feed-in-Line
"C" for Coax Cable Feed-in-Line
Antenna Supermarket Eavesdropper Dipole Antenna
http://www.universal-radio.com/catalog/sw_ant/0680.html
http://www.shortwavestore.com/sws/product.php?productid=623&cat=0&page=1

Note - At 43 Feet (13.1 Meters) long is relatively short
Dipole Antenna for All-Band Shortwave Coverage.
http://www.antennasupermarket.com/products.html

SECOND - Dipole Antennas are Directional Antennas : When
they are properly Rigged at the Correct Mounting Height.

THIRD - Introductory Dipole Antenna {Short} Reading List :
* Antenna Basics
http://www.electronics-tutorials.com/antennas/antenna-basics.htm
* How High ? Should My Dipole Antenna Be ?
http://www.qsl.net/aa3rl/ant2.html
Dipole Antennas - The Effect of Height Above Ground
* Dipole Antenna
http://en.wikipedia.org/wiki/Dipole_antenna
* The Hertzian Dipole Antenna
http://farside.ph.utexas.edu/teaching/em1/lectures/node64.html
* The Dipole Antenna
http://www.radio-electronics.com/info/antennas/dipole/dipole.php
* Directional or Omni-Directional Antenna ? - by Joe Carr
http://www.dxing.com/tnotes/tnote01.pdf
* * * Good Reading - Joe Carr's Tech Notes
- - - http://www.dxing.com/tnotes.htm
* Dipole and Inverted "V" Antenna Design - by AManDX
http://www.angelfire.com/mb/amandx/dipole.html
* Thoughts on "Antenna Design" - by Bill Weinhardt [W9PPG]
http://our.tentativetimes.net/opine/antenna.html

FOURTH - RIGGING - The Antenna Supermarket Eavesdropper
Dipole Antenna : How High Should It Be ?
As with many Multi-Band Dipole Antennas for proper function

at the lowest Frequency the Mounting Height is very important.
* So for the 75 Meter Shortwave Band a Quarter Wave Length
(1/4 WL) would be 59.2 Feet High. - This would be inpractical
for most Shortwave Listeners (SWL) to accomplish.
* Another Rule-of-Thumb for Shortwave Listeners (SWL) and
Dipole Antennas is "As High As" the Dipole is Half as Long :
So for a 43 Feet Long Antenna Supermarket Eavesdropper
Dipole Antenna - This 'reasonable' Mounting Height would
then be about 21.5 Feet High.
* If... All-Else-Fails - - - Read-the-Book {Instructions} :
For the Antenna Supermarket Eavesdropper Dipole Antenna
the manufacture Antenna Supermarket recommends a
Mounting Height of 25 Feet for this Multi-Band Dipole.
http://www.antennasupermarket.com/EAVESDROPPER.htm
http://www.antennasupermarket.com/EAVESDROPPERT.htm
"The Eavesdropper is designed to be suspended with the
Center of the Antenna about 25 Feet Above Ground."

FIFTH - CONSIDERING A SECOND ANTENNA :
As to your Question about a Second Antenna running
North-to-South as opposed to your current Antenna that
is running East-to-West.
* For a properly Rigged and Mounted Dipole where you wish
to Receive from All Directions - A Second {Identical} Antenna
is always a good idea.
* Why - A Second {Identical} Antenna ? - "IF" you are going
to be doing some "A" and "B" Directional type Switching from
one Antenna to another - Then having two of the same Antennas
will best let you know which is the better Receiving Antenna
for that Signal from that Direction at that time.
* The Antenna Supermarket Eavesdropper Dipole Antenna
http://www.antennasupermarket.com/EAVESDROPPER.htm
"Of course, a second Eavesdropper can be erected favoring
the other quadrants, to provide maximum performance in
all directions. Switching between two Eavesdroppers at the
receiver will give you maximum flexibility for your location,
allowing you to optimize reception of a particular station.
These directional characteristics are not unique to the
Eavesdropper; they are shared by all half-wave dipoles."
* "IF" a Second {Identical} Antenna is used for oposing
Cardinal Headings N2S [N/S] and E2W [E/W] then you
have three options to Mounting the Second Antenna
alone with the First (Original) Antenna :
1 - "X" Lay-Out - Co-Located Centers which is usually the
easist and simplist second Rigging and Mounting to do
using what is already available {The Main Center Support}
- Provided that there is Available Space to Rig the Second
Antenna along the Perpendicular to the First Antenna ? ? ?
2 - "T" Lay-Out - At one end of the First Antenna and
Perpendicular to the First Antenna - Using one of the existing

End Supports of the First Antenna as the Center Support
of the Second Antenna.
- Note - Here is where having the 3-5 Feet of Rigging Rope
between the End of the First Antenna and the End Rigging
Support (Center of the First Antenna) is very Important.
- Again Provided that there is Available Space to Rig the
Second Antenna along the End that is Perpendicular to
the First Antenna ? ? ?
3 - Far Away from the First Antenna at least a Half Wave
Length removed from the First Antenna and preferably a
Full Wave Length for it. Now this Requires a Lot of Space.
At 75 Meters this is 118.5 Feet (1/2 WL) to 249.1 Feet (1 WL).
- Even using a Rule-of-Thumb what ever your Antenna is
Tip-to-Tip approximation this is 43 Feet Away with another
43 Feet for the Second Perpendicular Antenna which means
about 90 Feet of additional Space for the Second Antenna.
- Usually Option # 3 is not a viable choice for most Shortwave
Listeners (SWLs) living on the average (small) urban lot.

SIXTH - WHY NOT RIG IT AS AN INVERTED "V" ANTENNA ?
Vice a Flat Dipole Antenna consider Rigging the
Antenna Supermarket Eavesdropper Dipole Antenna
as an Inverted "V" Antenna with the Center a little Higher
adn the Ends a little Lower. From the Center the Arms
of the Antenna Drop at about a 30 Degree Angle.
The Center would be about 30 to 32 Feet High with
the Ends of the Arms at about 19 to 21 Feet High.
Average Height of about 24 to 26 Feet above Ground.
This would reduce the Ground Foot Print {Space}
of the Antenna from 43 Feet down to about 37 Feet.
Note - The Dipole Antenna that is Rigged as an
Inverted "V" Antenna has more of an Omni-Directional
(All-Around-Everywhere) Reception Pattern then the
Dipole and could mean that you would only need one
Antenna instead of two Antennas.
{ Something To Think About - Consider }

hope this helps - iane ~ RHF

No matter what you think it's going to happen. The best thing you can
do IMHO, is to help make the new no-code hams comfortable in the hobby.

If you feel that morse code is an essential part of ham radio, teach
morse code classes. Listen on the Novice/tech CW bands. Next time you
hear a bad sounding CQ at barely five wpm, don't sneer and move on,
work the guy. Do it slowly, carefully and curteously.

If you want to have new hams stay hams and to use CW, make them feel good
about it. Next time you talk to someone on a repeater who is a new ham,
offer to elmer them. You can start with CW and move up to building an
oscilator that they can use to key their HT.

That kills two birds with one stone to use an archaic and cruel sounding
metaphor. They get to learn CW over the air for a small expense and
learn the joy of building something they can use.

BTW both Japan and the Soviet Union had no code HF licenses since the 1950s,
and no one ever seemed to mind.

73,

Geoff.

If one puts up the Eavesdropper in an inverted vee configuration it will change the resonant characteristics of the antenna.

You sound like the atypical code snob Steve. Getting rid of the code req. is
the best thing the FCC has done in a long time.

Based on what was known at the time. The same Clinton appointees whose
CIA was wrong about WMD gave the advice that Chalabi was clean.

> You can't get any more kissy kissy with an

" BTW both Japan and the Soviet Union had no code HF licenses since the
1950s, and no one ever seemed to mind."

Really? Thats encouraging to know, seeing as there are plenty of CW JA's to work. I guess they got interested in CW without being forced to learn it in order to get their tickets. Hopefully the same will hold true here in the U.S. if/when the FCC drops the code requirement altogether.

CW = my primary mode

Do you remember who in US government actually gets to spend money?

Clue: The president only gets to spend what Congress allocates him.

Clue: There isn't enough of a Republican majority to get a bad foreign aid bill passed without Democrat cooperation.

This page should have been called "Truth", like the source of the recent anti-smoking propaganda on television.

I can copy around 10wpm and I'm not a ham. It's not hard but it does take
practice and a dedicated will to learn. Anybody can learn to copy 5wpm if
the spend a week or two in their spare time. It helps if you have a person
that knows CW helping you. Most radio clubs give classes. I don't understand
why a ham wouldn't want to know it and gain full privileges? CW is kinda
neat when you learn it and it is kinda a right of passage type thing. I
wanted to learn it just to kinda know what was being said in that mode.

Restitution added to long sentences is just overkill. No way they're gonna pay it while in prison, and it just forces more paperwork on an already ludicrously overburdened court system. I'm all for one or the other, both makes no sense. Preferably, the restitution, as putting them in prison only costs US more money, and really does nothing for the victims in this case. Prisons should be reserved for rapists and murderers, possibly robbers.. property and drug crimes should have alternatative punishments that don't cost the taxpayers $25,000/year per person incarcerated, and pay back the victims for their losses.

You want the power supply "wall wart" to be a linear regulator type that
uses a transformer and is bypassed for low noise.

Yes, 5 wpm is not such a difficult task to master. There is a sense of accomplishment getting the code ticket as with anything that takes a little effort.

The fcc is just going to turn the HAM bands into another place for morons to hang out like 11m.

There are arguments for code. It's more reliable and takes up a lot less bandwdth.

I didn't say that... and I don't know how you figure I did. Restitution is
punishment. Especially if it's garnished from wages. Does it make sense to
you somehow that we pay $25,000 a year to keep someone in prison while the
victim gets no recompensation?

A large number are. What challenge is there to getting a ham license when the test pool questions are available to anyone that wants them, and all they have to do is memorize the answers? I actually had to know something about what I was doing to get my license. I started like most with a Novice ticket and 5WPM code. I taught it to myself by writing a BASIC program to send to myself using my old VIC20 computer. A month later, I got my Tech Plus ticket. I never could work my way up to 14WPM because I have to 'translate' in my head (like I do with all the human languages I have studied), so didn't get my General till April 2000.

Tuned in today and did not hear a thing on any of the above frequencies
just after 20:00 UTC. Maybe someone else up the coast can pick it up.
Conditions were OK today so maybe it just does not propagate here well
or my antennas just happen to be weak on those frequencies.

I'll have to give other broadcast times a try. I have picked up Israel
in the past and I believe it was during the day time.

There are wall warts that don't use a transformer to step down the voltage??

Seems to me the only way to tell whether the output is regulated and bypassed is to check the voltage with varying loads and 'scope the output for noise.

I'm starting to think it would be easier just to get one of those little Radio Shack 2 or 3 amp power supplies for $15 or $20 new or at a hamfest for $5.

I received this message this morning. I doubt it qualifies as a QSL.

Thank you for your report on our Farsi broadcast on 7110 kHz. We had started this broadcast on January 01, 2006. The station is Wertachtal, Germany, and the transmitter power is 250 kW.

Unfortunately, this information has not yet found it's way into our Web schedule. I will ask our web master make an update.

Kind regards,

Claudius Dedio
AWR Frequency Management Office
PO Box 100252
64202 Darmstadt
Germany (UTC+1/+2)

So for the signal to reach me, it is overshooting the target area by 14,000 kilometres!

I've been a ham for over 10 years and have never had to resort to using code.

It's fun but not needed in todays world. I'd rather new hams be a lot
more technically oriented.

There are only a few frequencies that have morons on them. Out of THOUSANDS.

99% of all hams are great people. That one percent hang out on one freq
on 75m. Screw those dopes.

But, none of this is the fault of new hams. None of them had a say in the lessening of examination requirements. That was decided before they got on board. Long-timers need to remember this, but at the same time, lessened entry requirements to amateur radio should not automatically translate to a lesser quality of skills, operating acumen, or consideration shown to one's fellow operators.

A key to keeping people active in the hobby is to encourage furtherance of one's skills upon receiving one's license... whether that be in older methods such as CW, or in more modern stuff like weak-signal work in the GHz range... and there is lots to do in between...

Ah, yes... the "Pig Farmers." I've heard them. listened briefly, and decided to spin the VFO, ne'er to return. They really do reek up the band. 'Course there have been some 'nets on 40 meters whose participants' bacon seems to have slipped off'n their burgers, too.

One thing I can say about my experience in communicating with CW ops is that they are top-notch when it comes to operating skills and consideration. I've never met one jerk on CW... I'm sure there might be some exceptions, but I've yet to meet one.

You could buy a replacement whip for the 800 and adapt it for the 225.
(not kidding)

The 800 whip can be purchased on the following webpage. It's probably
the longest whip antenna available for any shortwave radio.

http://www.etoncorp.com/US/support/order_parts.aspx?index=11

There was. I had the Europa version of the radio, which I bought new in the '90s (I never should have sold it) and which came with a 120V wall wart.

You're right, and I'd bet the amp isn't included, but it wasn't in the
HF-225E I had years ago, either, and sensitivity wasn't a problem.

There was a time (not long ago) when you wouldn't have been allowed near a computer unless you knew 2s complement math and assembly language. Good thing the computer industry didn't follow the radio amateur method or this would be a real quiet newsgroup.

The hum is due to a flaw in the audio output circuit design. Plug in an external speaker and it will go away. There's a resistor (R134 or 139 - can't read the lousy schematic, but it's connected to J7) you can bypass (short out), and the hum in the internal speaker will be gone completely with an unregulated wallwart. No one has been able to figure out what the original Lowe designer was attempting to do with this circuit by connecting the internal speaker capacitively to the B+ rail instead of ground (which is what the external speaker connects to when plugged in.

Jim's right - different leagues in both price and performance. But, like different levels of sports leagues, you can have a lot of fun in the juniors. If your DX-394 is in good shape and alignment, it will do very well for you.

There's a 960 member user group at

I remember flattening the centre of a bit of 14 guage solid wire for a home made replacement tip on those things.The gun was handy for one or two solder joints, but after that,soon became a pain.

I've preferred the pencil type ever since. I've found around thirty five watts works for everything I do...well, not EVERYTHING, but a propane torch handles those jobs.

I too have tried in the last few days without success and am also on
the left coast. Probably a propagation issue - have had problems with
other Mid-East broadcasters as well.

I heard other middle eastern broadcasts such as Kuwait today so
propagation seems to be OK from the middle east to here. Maybe the

Israel time and frequencies are a poor choice for the west coast.

There are other west coast people that read the news group so if they respond we will see how they are doing with Israel these days.

Conservatives 125
Liberal 102
Bloq Quebec 51
NDP 29
indep 1

The conservatives, under Harper, did not get a majority (155).
This prevents them from doing anything radical as they will
have to govern with a coalition of other parties. Martin has
announced that he will step down to allow the Liberal Party
to renew itself. All this should have no effect on US/Canada
relations or the continuance of Radio Canada International.
Listen to RCI for full details and commentary.

Judging from his troll tactics, language and a number of other factors, it seems to be the same guy who was earlier posting under the name of "Rob".

As for his YB-400, it has on occasion been the subject of ridicule (I guess these things simply depend on who he's trying to get riled up):

http://groups.google.com/group/rec.radio.shortwave/msg/6a17d19d9ad9d270

As for his two R8 receivers, they were such a "big disappointment" that after 6 months of use, he gifted them to his sons so that they could listen to their high school radio station (!):

http://groups.google.com/group/rec.radio.shortwave/msg/3ba2cb7d67d7180a

As far as these things go, one can't help but to concede that the "high school radio" touch to the story was pretty original.

This guy seems to have also posted under a few other names: "johnboy" and "JR" and "jack@home.net". While he changes names a lot, various aspects of the troll tactics remain consistent. In any case, he seems to keep himself amused. And, after all, for good or ill, usenet is basically one big zoo where anything goes...

I have been listening to RCI about the elections. I don't expect any
changes in Canada over this election result even if the Conservatives
has gotten got the +155 for a majority. Canadian societal inertia is
large and the prognostications of the Liberals should the Conservatives
win was just hilarious.

The actives will make up for the signal power being halved in a 1 to 2
but they cost more money. If you want to hear a signal that is just
above the receiver noise floor before the splitter you might not be
able to hear it after the power is split through the passive splitter.
Weak signals through the passive splitter will sound a little noisier
depending on your radio. If you want a 1 to 4 you should consider an
active unit.

Hello,

Here in France it can be heard loud and clear... No big deal and not DX since
the transmision is targetting western Europe.

No problem with the audio quality...

Charly

Greetings! I tend to go Republican, but that was too good not to laugh at! It reminds me of the Andy Griffith show where Goober gets a blind date with a teacher and she asks him about how many books he read last year and he gives her a big number only to find out later that he is talking about comic books. Thanks for the laugh! Jon in South Carolina.

Well, the 60 kHz WWVB transmissions were designed to be decoded, and there
are a fair number of projects out there to do just that. However, depending
on where you are, you can typically only hear WWVB for a small part of the
day.

It would be best remedied by removing all pre-built ham gear from the market and making it a requirement for hams to build all their own gear (as it was in the beginning).

Of course, this isn't about to happen, too many of us like all the bells and whistles on our fancy store-bought rigs (though I could still build my own AM/FM/CW/SSB rigs (not necessarily all in the same rig), I couldn't build something with all the memories, PLL style VFO, etc..)

You could substitute several difficult to learn but equally meaningless
tests for the cw test and still meet your requirement for challenging
new hams. For instance we could require hams send messages with
semaphore flags; or we could take them down a completely different path
and require that they exhibit a thorough knowlege of COBOL; or we could
require that they show proficiency in automobile transmission repair.

Congratulations on passing the test. However to require that
meaningless test of new hams when there is no practical use for morse
code will do nothing more than drive prospective hams from the hobby.
Fortunately the FCC is finally realizing that the world of
communications has moved forward from the 1950's. It is time that many
members of the hobby do so as well.

ah.

Anyway, back to the whip. The amp and whip form an active antenna which works pretty well. You won't get nearly the sensitivity off the same whip connected to the 50 ohm input of the radio. But it sounds like you might not be using it that way anyway.

Lowe will sell the whip amp for the HF250, which can be adapted to the HF225. You'll have to find someone outside of the US to buy it and send it to you, though.

How about the sync detector? Did your HF225 come with that?

It only serves to drive the whiners and complainers away. The doers will do what it takes to obtain a license.

The whiners and complainers will sit on the sidelines with their thumbs up their butts until things change in their favour.

That's the way it's always been in most any human endeavour. There are those who can, those who can't, and there are those who are just plain lazy.

Buzzygirl wrote:

> Whose fault is this? And more importantly, how it is best remedied?

I'm not sure it's as necessary as people think. The whole purpose of the "Amateur Radio Serivce" in the U.S. was to provide a pool of already trained, ready to use radio operators in a war or emergency.

Events of the last few years have shown that inside a disaster area or war zone, a radio operator needs to now how to use short range VHF equipment, and communicate well in a panic situation by voice.

Outside of a disaster area, the internet has become the method of choice for health and welfare traffic. Obviously, people who can man the communitcations centers who are both computer and radio savvy are needed there.

CW operation has no place in either. Convincing the heads of FEMA, the Salvation Army, the Red Cross, or the local police or national guard that it is necessary simply won't happen.

My generation was the crossover. In the mid '60s, children were exposed to computer programing and started to move away from ham radio. There was a short "burp" in the '70s when people still built their own computers, but by 1980 it was gone and forgotten.

Ham radio was difficult to get into, morse code is difficult to learn and for many of the people who are the computer geniuses of today, impossible by traditional methods. Computers are welcoming. They are a lot cheaper than radios, no morse code, no technical exam, just buy one at x-Mart, and you're on.

This has caused many problems because people just don't build anything anymore. It is almost impossible to find an engineer who is familure with a soldering iron. Try to make a prototype device without a lot of funding and you will understand what I mean.

Ham radio, IMHO, in order to survive needs to be a more hands on, people oriented hobby. Elmering and outreach are the way to continue it.

Forcing people to learn morse code is not going to get more or better hams. Education and experience is.

If you want to have people learn morse code offer to teach it. If you want to get people to build things teach them. If you want people who passed the test copying 5wpm and don't even own a key, help them get one and build a cpo.

If you want people who are just on hf to stay with cw, go down to
the low speed (novice bands) area of the HF band and work them.
Be kind and patient. Help them to enjoy the hobby.

73,

Geoff.

Anti-war Stance Is Right, Not Left
by Gary Benoit
February 6, 2006

According to the wisdom of the day, the left is against the war in Iraq while the right supports the war. So why do The John Birch Society and its affiliated magazine THE NEW AMERICAN support the withdrawal of our troops from Iraq? Isnï¿½t that the position of the hard left? (Click here for an online letter to Congress, "Bring Our Soldiers Home From Iraq -- Now!")

In actuality, there are fundamental differences between the left and us regarding the question of war.

Unlike the left, we do not believe any one man should ever be entrusted with the awesome power of deciding when to go to war. It makes no difference if the president is a Republican or a Democrat, a conservative or a liberal. The Constitution assigns to Congress, not the president, the power ï¿½to declare war.ï¿½ If America needs to go to war, Congress should declare it.

Democrat presidents were wrong when they claimed that the decision to go to war was theirs to make, and President Bush is wrong when he makes the same claim. Mr. Bushï¿½s acknowledgement of last December that ï¿½as President, I am responsible for the decision to go into Iraq,ï¿½ overlooks the fact that this decision was not his to make.

Unlike the left, we recognize that the presidentï¿½s powers as commander-in-chief are limited, as well they should be. Under our system of government, we have a president entrusted with certain specified powers; we do not have an elected dictator or a king. As Alexander Hamilton explained in The Federalist Papers (No. 69), the presidentï¿½s authority as commander-in-chief amounts ï¿½to nothing more than the supreme command and direction of the military and naval forces, as first general and admiral ï¿½ while that of the British king extends to the declaring of war and to the raising and regulating of fleets and armies ï¿½ all which, by the Constitution under consideration, would appertain to the legislature.ï¿½

Unlike the left, we do not want to send our troops to war to enforce United Nations Security Council resolutions. Yet this is exactly what President Bush did in the case of Iraq, by his own repeated admissions. For instance, on November 8, 2002, the day the Security Council passed its Resolution 1441 insisting that Iraq eliminate its reputed weapons of mass destruction, Mr. Bush declared: ï¿½America will be making only one determination: is Iraq meeting the terms of the

Security Council resolution or not?... If Iraq fails to fully comply, the United States and other nations will disarm Saddam Hussein.ï¿½

Even though the left supports intervening militarily on behalf of the UN, it opposed Bushï¿½s intervention in Iraq because the Security Council did not pass a new resolution explicitly authorizing a military invasion to enforce Resolution 1441 and other Security Council resolutions. The irony is that the Bush administration, by launching an offensive war against Iraq, actually demonstrated it was more interested in putting teeth behind Security Council resolutions than the Security Council itself was.

Unlike the left, we believe in putting America first, which means minding our own business, avoiding foreign entanglements, and going to war only when necessary to defend our citizens and country. We should not be the worldï¿½s policeman. Nor should we spill another drop of American blood to wage the Bush administrationï¿½s ï¿½global democratic revolution.ï¿½

Using military force to right the wrongs in other countries and cultures dissimilar to our own is sure to backfire, even if the intent is sincere. As John Quincy Adams correctly observed: ï¿½America goes not abroad in search of monsters to destroy. She is the well-wisher to the freedom and independence of all. She is the champion and vindicator only of her own.... She well knows that by once enlisting under other banners than her own, were they even the banners of foreign independence, she would involve herself beyond the power of extrication in all the wars of interest and intrigue, of individual avarice, envy and ambition, which assume the colors and usurp the standards of freedom.ï¿½

Countries that mind their own business are less likely to be attacked than those that intervene in other countriesï¿½ affairs, particularly when those interventions come to be viewed as unwanted occupations.

Unlike the left, we believe that ï¿½to be prepared for war is one of the most effectual means of preserving peace,ï¿½ as George Washington succinctly put it. This means preparedness by our intelligence services as well as the military against terrorist attack or military attack by a foreign power. Countries that are prepared are much less likely to be attacked than countries that are not prepared.

Unlike the left, we believe that in war ï¿½there is no substitute for victory,ï¿½ to quote General Douglas MacArthur. Why, therefore, do we want to bring the troops home now? Why not win and then get out? Well, if winning means eliminating Iraqiï¿½s reputed weapons of mass destruction, there is no victory to obtain because those weapons do not exist. If it means toppling the Saddam regime, that victory has already been achieved. But if it means propping up the new Iraqi regime until that regime can stand on its own, that ï¿½victoryï¿½ would be no victory at all, since that new regime is fast becoming another Iran, an ï¿½axis of evilï¿½ nation.

I have a nice die-cast Radio Shack bookshelf speaker I bought probably 15 years ago that I use on my SW/Ham radios. It's not a perfect speaker but it's fairly mellow, not at all tinny, and extremely durable.

I think Radio Shack sold them as outdoor/patio type speakers when I bought them and I seem to recall the name "Minimus-7".

I go to look at Radio Shack and they don't have anything like this anymore. They've got some really crappy plastic-tinny sounding speakers that I don't like at all, and would probably break the first time I looked at it funny.

What speakers are available in durable die-cast housings these days? And I hate tinny sound (like comes out of a PC-clone speaker). I refuse (just out of abhorrence of the sound) to look at any PC or PC-with-amplified-subwoofer crap speakers.

Did I mention that I don't want any PC speakers, and they all sound awful? (Hint, hint, DO NOT SUGGEST THIS OPTION!)

Tim.

I saw that Lowe has instructions for adapting the 250 amp to the 225,
and I'd be interested in doing that...but I'll have to find somebody in
the U.K.

> How about the sync detector? Did your HF225 come with that?
> John

Yes. It's a Europa, so the FM/AM sync option came standard. Or if it
didn't, it was installed.

I agree, the Minimus 7 speaker worked very well for shortwave listening.

Frank,

Great information, since I've got a boxful of wall warts and wasn't
looking forward to testing them one by one for regulation. Is this fix
endorsed, or at least acknowledged, by Lowe?

I have to agree with you. Out of all of my CW contacts only a few have been impatient or irritable and that was only because they were contesting and I, being a newbie, was answering their contesting calls without or with wrong contest info. Otherwise, every CW op I work is very considerate and friendly.

That is a bygone era, and I'm not sure that hams really ever provided a
significant contribution to emergency communications.

>

Actually hams need to be recognized as being able to make a significant
contribution to emergency communications by the professional emergency
responders. My sense is that they are pretty much an afterthought.
Additionally hams need to have the equipment to communicate whth the
professionals.

Does a bigger antenna help? Or is there just so much more background noise
than signal that it's a lost cause?

Hmm... isn't the data rate something like 1bps? Maybe they could do some
direct sequence spreading at 100Hz or so and improve the link margin a handful
of dB... :-)

why is it suposed to be a chalenge TO get the license I see nothing
saying that in Part 97

does anybody have any text from any era saying it should eb a challange
to GET the license

the process of geting a license is NOT an exercise in S&M

you sound like many other

what would satify you

Or lazy?

At any rate, if one really wants the ticket 5 WPM shouldn't be a barrier. The ONLY barrier to learning 5 WPM is either being dumb or lazy. And the ONLY folks who would suggest otherwise are either dumb and/or lazy or are supporters of the dumb and/or lazy.

Anything else is simply a lame excuse.

Go to Bob Heil's site, the amateur radio section, and look at his
amplified speaker. Has built-in anti-noise circuitry, too.

You can find minimus-7's and 77's on eBay. I
found a couple at a yard sale last year. If you
find one and you want to upgrade it a bit,
you can go to partsexpress.com and you
can find a project there that someone did to
replace the drivers in the minimus-77's to
achieve better sound.

Only for those who are unwilling to learn it!

Bottom line, if you want the priveleges, you takes the test (and that pretty much holds true for anything), you don't get to 'cherry-pick' the particular things that you feel comfortable with being tested on, or that which YOU feel YOU have a use for.

You're sounding more and more Liberal with each post!

Tim, you might also search for the name "Optimus" Same cast Al case and speakers with internal crossover networks. Same speakers as the Minimus, different timeframe. IMHO, neither sound near as good as a good set of stereo phones, but agree that it's easier to demonstrate to visitors using the speakers.

What about when ther is NO power! Low powered CW rigs get through
when everything else fails. It has been demonstrated time and again.
They can use battery or solar power better than voice rigs because of
their low power draw.

Convincing the heads of FEMA, the
>Salvation Army, the Red Cross, or the local police or national guard

Partly true but ther is still a need for CW as in my example cited
above!

>Forcing people to learn morse code is not going to get more or better hams.
>Education and experience is.
Learning Morse Code (CW) IS education!
>
>If you want to have people learn morse code offer to teach it.
I learned CW at age 21 from some 13 year old explorer scouts who could
use CW at 35 WPM or higher. They viewed it as a challenge and were
willing to pass on their knowledge to others.

If you
>want to get people to build things teach them. If you want people

I partly agree however there are QRP (low power) enthusiasts who use
CW much of the time and enjoy it very much. They hold seminars near
Baltimore every year and are enjoying a rise in interest among fellow
and prospective hams.

Well, I guess I am an 'elitist'. I was able to pass the 13 WPM requirement to obtain a General class license.

I didn't allow the code requirement to hold me back whether I was going to ever use it or not. I wasn't lazy, I wasn't dumb, I simply wanted the ticket, and I didn't whine about it.

Now, I guess I could use your mentality (and that of others) to provide a 'mental block' to my obtaining a Extra Class ticket if I desired to get one. I could whine, complain, stamp my feet and say that there are questions on the Extra exam that pertain to things that I just don't personally plan on using in Amateur Radio.

But would I allow those things to get in my way? No, I'd simply buckle down, study, and take the test.

I'm not a whiny Liberal.

The same time code is in the WWV HF signals as a 100 Hz, One Baud, pulse
duration modulated subcarrier tone. If you've only got a communications
grade speaker in your receiver, you may not notice it.

Tim / TE,

Look on eBay for one of the Center Channel Speakers from a
Sound-A-Sound System that has a Wooden {Particle-Board}
Speaker Enclosure. These usually have a Pair of 4" to 5.25"
Mid-Range Speakers and a much smaller Tweeter placed
between them.

Here is an Example of a Center Channel Speakers Listed on eBay :
JBL EC25BE 2-Way Dual 5-Inch Center Channel Speaker
http://cgi.ebay.com/_W0QQitemZ5858432743
The NorthridgeTM E Series EC25BE center channel loudspeaker was
custom-designed to superbly reproduce the human voice. Many movie
soundtracks consist mainly of dialogue, so that the center speaker
shoulders the burden of filling a home theater.

"The 'SOUNDS SWEET' Communications speakers maximize intelligibility
from your transceiver, receiver or portable by reproducing only the
communications voice and shortwave music frequencies coming from your
SSB, AM or FM communication or shortwave radio."
GoTo=> http://www.soundssweet.com/
A Little "Pricey" at $99.

Also, if you are using one of the 'portable' AM/FM Shortwave Radios.
Check-Out the Kiwa "Audio" Mods for a better sound from your radio.
[The Speaker is only as 'good' as the electronics that is driving it.]
KIWA=> http://www.kiwa.com/index.html

FWIW - External Speakers for the ICOM IC-R75
http://groups.yahoo.com/group/icomr75/message/4360
Here are the Two Most Often Recommended External Speakers
for the Icom IC-R75; as suggested by the Members of ths eGroup.

#1. RCA Mini-Speaker Pro-X33AV
Radio Shack Cat #40-5000
http://groups.yahoo.com/group/icomr75/message/1312
A shielded 2-way speaker with a 3" woofer
and a dome tweeter about 6.5" high.

#2. RCA 20-Watt Full Range Mini-Speaker
Radio Shack Cat # 40-5024
http://groups.yahoo.com/group/icomr75/message/2031
http://groups.yahoo.com/group/icomr75/message/769
A shielded full range 4" speaker. It is a Black 5" cube.

NOTE: The general comment is that both of the above external
speakers in the "Black Color" looks very sharp next to the R-75.

OTHER - Speakers mentioned frequently that are good with the R75.
* Optimus PRO-X88AV's RadioShack Cat # 40-2084.
* Barjan PROnouncer (320-25) 4".
* Radio Shack XTS 25 (40-1999A)
* Radio Shack 21-549A isn't a 'full range' music speaker. It is
a 'communication/voice' speaker.
* Minimus 7 Speaker by RadioShack 4" Speaker
* KLH 911's (2-way semi-compact at about a foot tall)
* Mocom 70 4".
* Grove SP-200B sound enhancer

NOTE - Most 'matching' Speakers offered by OEM manufactures
are basic 3"-4" Speakers in a Sealed or Ported in Metal Enclosure
designed to opperate on a few Watts output. A simple Speaker in
a tin box for $60-$120. But Hey it 'matches the Receiver and has
the OEM's 'Brand Name' on it.

READ - External Speakers for Shortwave Radio/Receivers

That's a pretty big range. Kinda like saying, "as Right as Vladimir Lenin
and Gerhard Schroeder."

Then again, you liberals always distort the dimensions:

```
|--|-------------------------------------------------------|---------------------->
L C R to far right->
e e i
f n g
t t h
e t
r
```

That way you can call yourselves centrists while professing crap like, "From
each according to his ability, to each according to his need."

Nope. I'm waiting to see how the current license thing shakes out. Been
meaning to for awhile now. I listen in on some 2m nets and stuff via the
scanners and am starting to get the bug to talk insted of listen.

From what I've seen the current ham tests are just like what Microsoft had
for NT certification. Petty easy to pass with some memorization. But MSFT
got wise and made the tests harder with each OS release. It would be fairly
easy to make the tech test harder by not publishing the answers. You'd get a
better quality of hams then instead of people with good memory who can
barely do code.

Well, your constant whining that removing code will "dumb down" ham radio
dosent really hold water. It's not like the ENTIRE HF band will be opened up
to techs anyway.

Go to Ebay and buy used Minimus speakers...

Search for minimus, radio shack, and RCA, the last brand on them..

I have a set of the RCA and two set's of RS Minimus, and the RCA and the
newer of the two Minimus are exactly the same, except for the RCA logo.

RCA:

That would certainly be true, however, it seems as though you do want a license but are unwilling to learn the code. So, I guess you'll have to sit on the sidelines waiting to see how things shake out.

But, you can obtain a license now and talk till your lungs collapse, you just can't get on HF without doing that nasty code thing.

I hereby rest my case.

That's simply your Liberal opinion. But as a recently outed Liberal you've
completely missed the point.

Why am I not surprised?

LMFAO at yet another one.

Yes, it does change from time to time, however, the new question pool for the
Tech ticket does not go into effect until July 1, 2006.

But hey, keep making excuses...

> >
> > Yesterday, on 2 meters.
>
> When's the last time you were on HF?

Gee, maybe 10 years ago?

> How about the last time you used CW?

Maybe 10 years ago. I certainly haven't forgotten it though. Pretty confident I could get the key back out and do all right.

Interesting questions...but more to the point, one is compelled to ask "Mr. CW" (the self-appointed "ace" and defender of the CW flame) what his *current* CW speed is and how much CW he actually operates. Is he a VE? Has he mentored any potential new hams--or just given them a heaping ration of his usual ridicule?

Truth be told, with all his whining about excuses, it all seems to ultimately boil down to *him* using the oldest excuse in the book; i.e. "Well, I had to learn CW, so you should too".

How do you figure that, 'tard boy?

No one has ever said that using CW is a total time requirement. It's just like any number of other questions that have been on the test either now or in the past. It's just a 'question' on the test. Just pass the test and if you desire you need never use CW again. But, you can always renew your license.

One doesn't get to 'cherry-pick' the questions one wants on the exam. I realize though that that concept is pretty much beyond you.

I figure I could send 18-20. Receiving itself may be a bit rusty, say 10 or so?
The real key would be how long it might take me to get up to speed again.

One thing though, you don't have to appoint yourself 'tard boy', as I've done it
for you!

The comm guys involved in emergency response don't really have a use
for ham-based communications. Getting the people who can really
provide some assistance to victims of a disaster to communicate with
one another is difficult enough. Tying in hams would only bring chaos
to an already hectic situation.

In several hurricanes I've monitored the hams did little more than set
up the usual nets, read NOAA weather reports and check in with one
another. No emergency comms were made. In one memorable hurricane in
the late 1980's the 14275 net was able to make contact with one ham on
the impacted carribean island. It was chaos as guys tried to talk over
one another in voice and cw all at one time with that poor guy.

The concept of proper spelling seems to be way beyond you, (as does any test taking ability), and that probably has an effect on your code reading ability.

LMFAO at the clueless 'tard.

Me? Whine? If you think I'm whining then you've clearly missed the point, 'tard boy.

It's those who are to lazy to learn a measly 5 WPM who are doing the whining.

Waaaaaaaaaaaaaaaaaaaaaaaah!

Really? I'm not the one who is incapable of passing a CW test (and neither is he, for that matter), it be YOU who seems to be incapable and continues to come up with excuses as to why YOU shouldn't have to pass that test. In fact, you've even shown that you can come up with a handy excuse for not even taking the Tech exam. (Question pool).

LMFAO at the newly born Liberal. You and (Ol) Carter should really get along!

Thanks for providing me with a fun filled, humorous afternoon.

Hi Starsky!

It was great to talk to you on Echo Charlie 6.670.00 Mc this evening.
You really make me regret getting rid of my 706 as yours has great
audio and puts out a fantastic signal.

Hope to catch you on the lower frequency tonight.

Sincerely,

Steve (Warlock 1313Z)

Just because your in prison doesn't mean you can't be productive and pay for your stay in prison. Make them work off their crime. Why we let em set on their asses on our $ is beyond me? I gotta work for my meal and bed. Why shouldn't they? The biggest problems with prisons is they come out just as bad if not worse than when the went in. Teach a skill or a trade to them and maybe they would have some hope and pride and a chance at a life when they get out.

How does dropping a code test equate to 'progress'?

I might buy the fact that without it, you might 'progress' to HF privileges, but beyond that, it'll take a heap of convincing.

Stop making Liberal excuses and just learn it and get on with life rather than trying to make life fit your particular vision of reality.

No, never said that. You're a Liberal because you're making whiny excuses as to why you can't or won't undertake a particular task, just like Liberals are wont do.

Like a little crybaby child you're simply pissed that there is something on a test that you are unwilling to do. And like the little crybaby child you're going to whine, cry and complain until you get your way. It's simply a fact of life that the code test is currently there, either pass it or go without the ticket. It's that or let life pass you by and/or catch up with your inability to perform a certain task. (i.e. the code requirement is dropped)

Just how am I backed into a corner? It's YOU who don't have the license. It's
you who are whining about the code test. It's YOU who have even made up a lame
excuse as to why YOU haven't even taken the Tech exam.

I've done all that, so how does it equate that I'm backed into a corner?

> I have
> an RNC card in my wallet how about you?

What does that prove? That you signed up? Other than that, it proves nothing.
You are free to go into that polling booth and cast your vote for Liberals all

day long.

Try again.

No not all of them work. Only those that choose too in most cases. Can you imagine the profit this country could could make if all those people were made to work. It would sure take a lot of burden off the American tax payers wallet. Our prison system is fucked up.

No HF or no CW for *TEN* years??? And yet you're presuming to tell everybody else how it should be done??? ...*and* ridiculing them if they disagree with your "expert" views???

On the other hand, seeing as you like to think of yourself as a self proclaimed "ace", I guess in your simpletoon mind, you also see yourself as the self-appointed CW expert.

Ya gotta love it!

LOL at the one with a pea-sized brain and Biggie-sized mouth!

We weren't discussing whether or not I get on HF nor were we discussing how
often I use CW. We were discussing the licensing requirements, 'tard boy. Please
try to pay attention. It was another one of your Liberal pals who was trying to
steer the discussion away from the licensing requirements into my own personal
operating habits. Nice trick, if one can pull it off, but it won't fly here.

>
> On the other hand, seeing as you like to think of yourself as a self

I never claimed that I was a CW expert, did I 'tard boy?, nor do I view myself
as one. I know the code, I'm proficient at the code, but I certainly don't view
myself as an expert. Please, try to pay attention.

LMFAO yet again at the clueless 'tard who obviously can't follow along.

That's OK.

Meanwhile, I'm laughing at YOU because you apparently are unable or unwilling to pass a simple test. But hey, you can wait a while longer and perhaps they'll be giving that ticket away with the Cracker-Jack.

Best of luck.

I've waited this long, a few more months aint nothin. And when I do take the
test, I'll be able to get on and use HF.

The problem with making inmates work to pay for their keep is that they have to put them into some sort of industry or another to make it work. The private sector uniformly bitches about this, because it takes away their business and therefore profits and jobs. As a rule, prison labor is not allowed for anything the private sector does to make a living. Prison Blues is the exception that proves the rule.

There's also the bunch that makes office furniture, though I can't recall the
name it goes under off the top of my head.

That's been a big complaint around here as office furniture manufacturing is BIG in this area.

At one point the Federal gov't was buying a great deal of furniture from them but steps have been taken to try and limit them to at least letting bids for the product, at one point they were obligated to go to the the prison system first.

Definately NOT!

> (the radio is the next project to figure out which one to get).

Location is as important as the antenna. It sounds like you have a
listeners dream location.
It is likely that just about any decent antenna connected to any decent
radio will bring you
more signals than you will know what to listen to.

If I were you I would first decide how much you wish to spend on a "decent"
radio.
Do you want a portable or desktop radio? That will define the next steps to
take.

My favorite and arguably the best portable is the Sony ICF-SW7600GR ($140).
Probably the best semi-portable or "desktop" currently in production is the
new Eton E1 ($500).

Hey DxAce..how does it feel to have worked so hard to pass a test that
means absolutely nothing today. Morse code has no use because nobody
is listening. You can count yourself as the proud owner of a
certificate that proves you can mimic the operation of a very slow data
modem. You can send and transcribe text at a rate that would put most
readers to sleep.

It means nothing today...nada...zilch...no value.

>
> > Morse code has no use because nobody
> > is listening.
>
> Nobody? Just who are all those folks working?

The audience for morse code is inconsequential...just a few other hams.
The world at large including hams in other countries has abandoned
morse code in favor of faster more reliable modes of communicating.

>

Sure it is, but if it makes you feel better to be known as "licensed"
to send messages at a snails pace then go for it.

>

>
> Yep, I passed the test.

Well, you can count yourself as being successful at some level I
suppose. As long as you ignore the fact that there is no worldly need
to communicate at such a slow rate, then yes I suppose you are
successful.

Ya know, I think I'm really starting to come to my senses. How could I have been so wrong for so long? I mean, what business did I have taking a test that would actually give me the privilege of doing something I wanted to do. How foolish of me.

You know John, I actually pretty envious of you. Here I've been coasting along with my General Class license all these years, years that I've wasted. Crap, I could've been a 'tard boy like you all these years, and I didn't even realize it.

Tell me John, just what have I missed in the wonderful world of 'tardism by wasting my time obtaining that dumbass license?

I'm looking to you to fill in my wasted years. You can 'Elmer' me.

You are, of course, in error. Ther e will always be a purpose for CW and
Morse Code. There are times and situations in which voice will not
penetrate, and where digital modes are not possible. If I'm on the high seas
or stuck in a disaster area, I will be glad that I do know Morse, because
I'll be able to put together a radio with which I can send CW even if all I
have is a bunch of spare parts, and that CW will be heard where phone or
digital at the same power levels never would be.

2960. Hints on Tuning Weak Station Next to Strong One

Newsgroup: rec.radio.shortwave
Date: 2006-01-25 02:42:02 UTC
From: Lenny <freilich@comcast.net>
Message-ID: <_5-dnZu7iI0NeEvenZ2dnUVZ_tmdnZ2d@comcast.com>
Source record: 59609

As the subject says, I'm looking for ways to hear the weak ones that are getting drowned
out by the strong ones in the same frequency area.
I'm using a Kiwa modified R-75 with an Antenna Supermarket Eavesdropper antenna.
I've tried every control on the Icom. With some stations, I can tune them so that I can understand
the voices. Others, I'm not so lucky.
Am I at the limits of what the R-75 can do?
Are there any other mods I can make to it, within reason, to improve it?
The radio does great with pulling in hams, the utility stations I've tried, stronger World Broadcast stations, and even some of the
weaker World Broadcast stations. But if there's a weak station next to a stronger one, no dice.
Does it take a better receiver, such as the Drake R8B to isolate out the weaker stations?
What is the property of the receiver that lets this happen?
Is it extremely sharp cutoffs on the filters?
Please explain?
Thanks for any light you can shed on this question.
Lenny

I'm interested in both. From the radio perspective, I'll certainly be happy (but not satisfied) when I am able to hear the station's audio. However, I was thinking this would be a good project in part because it leads to the logical extension of decoding the time signals. My plan of attack is to first try to get the audio, then try inputting it to the audio input of a PC and writing a program to decode the time signal, and finally implementing some kind of microprocessor-based decoder.

What are these high-power shortwave stations on the east coast? I often
wonder what is "out there" these days to tune in.

Hey Steve,

Great chat and very nice signal indeed today! I'm noticing a steady
increase of activity on a number of "odd" frequencies, so who knows
who will show up next -- and from where?! I'll certainly be looking
for you again. Your station also sounded simply maaaavelous; keep up
the good work. I hope you're able to contact some of your EU friends,
too. The band's open there quite often, so good luck.

All the best,

Starsky

Listening U.S.A. daytime: 13.555 MHz USB
Listening U.S.A. evenings & nights: 6.670 MHz LSB
Listening U.S.A. late nights: 3.475 MHz LSB
All above monitoring subject to propagation variations.
(And when I'm not elsewhere in the HF spectrum doing
other things. .... ..)

Go active!
I built Jim's (W8ZR) 8 port active multicoupler and it's terrific. It has
some features that the Stridberg does not provide. I do not think he sells
the kits anymore however.

You may have the bug, transmitter and a battery to send code in your sinking ship on the high seas. But as in other Walter Mitty dreams, nobody in the real world will be listening. Nobody......

Yes, I know that is one of the oft repeated dreams of the ham community...to be able to save the village being flooded or rescue the family in the earthquake by setting up that is instant link with the outside world when nobody else can. Sad truth is that it hasn't nor will it ever happen. And you know what - the professional emergency responders know this. That's why they just chuckle a bit when the conversation turns to hams and their morse code.

If it is comforting to you to be able to send out dits and dahs that are heard by nobody, I would say continue to enjoy that solitary pleasure.

I used to work for a place with many names:

AAA plumbing
Action Plumbing
AAA Able plumbing

And about 8 more. They used to look up customers that called on a giant rolodex thing, and if they had problems with them under another name, they made sure they never saw that name this time. They had a ton of magnetic signs.

They sent me to a house one day with a water heater, and never told me to cover the actual company name up with one of the other ones. The owner of the house sees my truck and goes ballistic. He was going to call the police if we didn't leave immediately.

I got chewed out, even though it wasn't my fault. At that point, I knew two things:

I was way too honest to work there much longer

I was going to get fired soon. And I did.

I had a job 3 days later, so I didn't give a shit.

> some stations, I can tune them so that I can understand the voices.
> Others, I'm not so lucky. Am I at the limits of what the R-75 can do?

Following what you wrote "I've tried every control on the Icom" means
you tried every blocking function the radio has so yes. It's possible
that you may not have had all controls in a optimum state at the same
time though.

> Are there any other mods I can make to it, within reason, to improve
> it?

For the radio itself a better filter then the one being used could help.
You need the filter to be sharper and it must also have a greater
ultimate rejection. A improvement in the combination of these two
specifications will improve the radios blocking.

If you have used all the functions the radio has, installed an improved
filter and you still have an adjacent channel problem then you could
use a more directive antenna where the null would be on the offending
station. You could use an antenna to peak the station you want relative
to the offending station. This is not likely as the offender is only 5
KHz away and that would take a very high Q peak tuner and the same
could be said for a tunable notch.

Best bet I think would be a small loop antenna where you would put the
offender in the null. The drawback is the loop null becomes effectively
less deep the higher in frequency you go. It should help < 10 MHz.

This will only work if the offender is on a different heading.

> The radio does great with pulling in hams, the utility stations I've
> tried, stronger World Broadcast stations, and even some of the weaker
> World Broadcast stations. But if there's a weak station next to a
> stronger one, no dice. Does it take a better receiver, such as the
> Drake R8B to isolate out the weaker stations?

The R8B has good to excellent blocking depending on which specification
you look at and the R75 manual does not have those numbers but I expect
that it is similar except for the Drakes sideband selectable sync.

> What is the property of the receiver that lets this happen?

Its called poor blocking another word would be poor selectivity.

This type of interference happens when the radios blocking specification has been exceeded by the combination of amplitude and frequency spacing of the two signals in question.

> Is it extremely sharp cutoffs on the filters? Please explain?

The IF filters make up a part of the radios selectivity and sharper is better because by definition the response falls off more rapidly but you can't at the same time ignore the filters ultimate rejection.

Because you are concerned with 5 KHz spacing it really depends mostly on the If filter characteristics. If you were concerned with larger spacing then other circuits in the radio such as the roofing filter, how the conversion is done and how many conversion stages there are in the chain would come into play.

One more thing, there are also problems on the transmitter end where the signal can take up more bandwidth then it is supposed to and there can be other problems such as "splatter" on poorly operated transmitters. A better radio can't help with problems on the transmitter end.

2971. Question regarding External Speaker hook-up

Newsgroup: rec.radio.shortwave
Date: 2006-01-25 04:59:00 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1138165140.555772.162940@z14g2000cwz.googlegroups.com>
Source record: 59620

Some years back, when hooking up an external speaker (Alpha Delta VRC) to my Drake SW8, I had to use a special adapter because the Drake's audio output "floats" with regard to ground.

I've never really used external speakers with any other radios other than my SW8 and tabletop units. Recently, however, I had thought to use an external speaker with some portable units: Sony SW77 & 2010, and Eton E1. I'm guessing that I don't need to worry about "floating output" with regard to these units, but I'd like to confirm about this before hooking 'em up to an outboard speaker. Can anyone here confirm?

Secondly, with regard to the Drake SW8, I've used the aforementioned adapter which allows this receiver to be used with an outboard speaker. The adapter is a 1/4'' male to female mini plug with a small wire that connects to the receiver's chassis. Up to now, I've only used this adapter when running the SW8 off of AC. I would ask anyone who might know, is use of such an adapter equally adequate for protecting the SW8 from adverse affects when hooking the receiver up to an external speaker when the receiver is being run off of batteries?

Thanks for any help provided,

Junius

< Snip >

It's called taking up a hobby like listening to short wave radio, ham radio, stamp collecting. He was interested in learning a skill and broadening his horizons.

It's pretty rude to characterize someone else's interests as a waste of time. What other people like to do has nothing to do with what John S. likes to spend his time doing.

Here is a tip for all posters to Usenet, when you respond to a post pretend the original poster is in front of you and read your response out loud before you hit the send button. Don't send it until you think the other person will not want to take a swing at you after reading it.

I don't understand why you had to "float" the connection from the Drake
SW8 to the Alpha Delta VRC because I don't know what it is. Maybe it was
an active speaker?

If you are connecting the radio to an external passive speaker you just
have an external isolated voice coil in the speaker and so you just
connect the two wires from the radio using the appropriate plug. Most
speakers are 4 to 8 ohms impedance and most tabletop to large portable
radios have enough power to drive a bookshelf size speaker. Headphones
are a better candidate for a small portable.

> SW8 to the Alpha Delta VRC because I don't know what it is. Maybe it was
> an active speaker?

Now discontinued VRC, external speaker w/audio filtration (notch, peak,
high freq cut-off, low freq boost/cut-off):
http://www.alphadeltacom.com/pg12.htm

Warning in instruction manual that "if neither radio receiver output
lead is grounded to the radio chassis, e.g. an insulated jack or
balanced output, then DO NOT connect the body of the plug to either
output terminal as this may cause damage to the circuits of the radio
but instead connect the tip of the plug to one of the output terminals
and the body of the plug to the radio receiver chassis. If the radio
otput is an insluated 1/4'' jack as with the Drake SW8, use the
furnished plug adapter and connect the wire lead of the adapter to a
screw on the radio chassis. On other radios with balanced output, make
or buy an adapter to make these connections properly."

As stated by someone previously in this newsgroup: "Be very careful
when connecting Drake radios to active devices like computer speakers
and applifiers. Some sets, the R8 series excluded, have a floating
output, and if one leg is taken to ground by the following device, it
will fry the ouput of the Drake."

So basically, I'm just seeking to make sure that the instruction
manual's caution is not applicable to the following said radios:
'2010, 'SW77, E1

>

It's not a passive speaker. Sorry, I should have specified.

>Headphones
> are a better candidate for a small portable.
>

Yes, I agree by and large; that's why I've never bothered to hook these
up to an external speaker. The filter options on the VRC are pretty

decent, though. Since I've recently taken this speaker out to use with an R8B, I thought why not give it a go with some other radios.

If the problem is more or less random noise, what is the point of
spreading the transmit signal, since the same noise density would
appear in a specific bandwidth after despreading.

> And lose the ability to be used as a frequency standard?

The GPS signal is DSSS and it can be used as a time and/or frequency
standard.

Lisa,

Does your DX-394 have the letter 'B' sticker on the back like the
following picture? It's the better version of the 394.

My experience with SW so far is limited to inexpensive analogue tuning radio and a dirt cheap Kaide KK959.

I've decided to get something decent and have read quite a number of reviews on Sangean ATS-909 and Sony ICF-7600GR on the web but am unable to decide which one to buy.

The Sangean seems to have more features and better packaged (including the AC adaptor) but costs about 1/3 more than the Sony. It is also larger.

Given the difference in price, do you guys think they are of different class to render a comparison meanlingless? Like you don't compare a Toyota Camry with a Mercedes S class, but you can do so with a Lexus LS430.

BTW, both the Sangean ATS-909 and Sony ICF-7600GR have been around since 2001. Should I wait for their replacement model?

Source record: 59632

http://www.universal-radio.com/catalog/commrxvr/0175filt.html
has some filter replacement tips.

Crystal filters at 455Khz are quite easy to find on the used market
($10 to $20) or new for about $80 or so.

You will get quite a few suggestions for filter bandwidths, but keep in
mind that narrow bandwidth makes for a dull signal since it chops off
the high frequencies. You would need one for AM BCB or shortwave, then
one for sideband. Around 2.4Khz for sideband is good. For BCB, maybe
6Khz.

The used crystal filters generally come on daughter boards. The odds
are the daughter board won't fit your radio. [I don't have a R75, so I
don't know how it is arranged inside.] However, there seems to be a
standard pinout for crystal filters. It may be the Icom has an open
area on the PCB to install the optional filters, or do a swap.

Some filters can be found here, but you should check to see if Kiwa
upgraded your filters.

I can't really agree with that having worked Italy on 20m using 1w SSB
on 20m. The rig was a Ten-Tec Argonaut 509. The biggest problem I had
was I forgot to say "over" after answering his CQ and he thought he missed
the last letter of my call.

That's kind of a loaded question. My best is a Kenwood R-5000. I sold it when I bought a TS-430 as the receivers are similar and I had an NRD-535d.

I was never happy with the ergonomics and the sound of the NRD, so I traded it for the R-5000 (and the difference in value).

Not counting the TS-430, which does just as well everything the R-5000 does, but has less memories, the second would be a Sony ICF-2010. The 2010 has better strong signal AM reception due to the synchronous decoder, but the R-5000 can hold its own in ECSS and is able to copy signals 10-20db weaker.

I also have a Sony ICF-7600a (the original analog version) which I bought used for $20. It has limited coverage and a scratchy volume control, but it works and receives the BBC adn the weaker FM stations quite well.

I also have a Grundig FR-200, which is ok, but even the Sony receives better. The last time we had a power failure, I brought out the candle lanterns and the FR-200. Watching me crank it took the edge off of the situation and yes, it did work ok, especialy since there was no interference from all the electronic devices in the area.

Geoff.

Best Receiver- JRC NRD-515 (It needs an alignment, the PBT is messed up)

Other Receiver- JRC NRD-525 with Kiwa ultimate rejection mod.

Other Receiver- Hammarlund HQ100 modded to the max, has fantastic audio,
and doubles as a space heater.

I've had a couple of portables, and never understood the logic of buying
a new 2-300 buck portable instead of a used 300 buck desktop, like an
R71A.

What's a portable and what's a desktop?

Is a R-392 a portable?

I guess a Space Spanner is a desktop? (probably...)

Most of my radios (R-390A's, WJ-8716's) are neither portable nor
desktop...

I've owned and sold alot of different SW Radios since
I started in the mid 50s

Presently the following are what I consider keepers:

Desktop:

Drake R8B Great overall reeiver.

Hallicrafters S38E My first receiver, basic but fine for BCB and SW
Broadcasters

Portatop:

Grundig Satellit 800ME - refurbished unit from Drake
owned 3 years w/no problems

Palstar R30CC - my latest purchase - almost as good as the R8B
without all the bells and whistles , operates on ac or aa batteries so
I'm able to use as a portable, compact and rugged, simple to use.

Portables:

Degen Version of the YB550, good sensitivity
small, easy on batteries, my usual carry along radio

Zenith R-7000 Transoceanic Larger Solid State
AM/F?SW/Weather band. Great older radio (1979) Nice sounding and good
sensitivity.
Great for outside use, loud !

That's all folks

The R-390A is without a doubt the best SWL receiver I've ever had for
pulling in difficult signals. It costs a fortune to operate one,
however.

"No one has ever said that using CW is a total time requirement. It's just like any number of other questions that have been on the test either now or in the past. It's just a 'question' on the test. Just pass the test and if you desire you need never use CW again. But, you can always renew your license."
>>
>>

> So why not replace the worthless code questions with more pertinent
> questions?
>
>

Worthless ???? Only in your estimation. It's really a matter of comittment after all. Want to be a ham radio operator ?? Take the test or sit on the side lines whining about a simple morse code requirement and wait until it gets removed. If nothing else, code requirements require effort on the part of the applicant and for the moment if you want to get on HF, it is required. It makes those who have gone before appreciate being a ham since they earned it and were interested enough to buckle down and learn morse and a smattering of electronics.

Should it be removed as a requirement? Possibly, but if so it should be replaced with much stiffer technical examinations, including an above average user levl computer component, than what currently exsists. The notion that a ham radio license should be a minimum effort passport to many Mhz of HF radio spectrum is utter nonsense. Wether or not CW is a "useful" mode of communication is another debate entirely. However by comitting to learning the morse code, and getting up to 10wpm minimum requirement, I became a ham at age 13 (that was minimum age back then). That ham license was a passport to a universe of excting possibilites that have lasted a lifetime. Perhaps the policy should be changed so that you could make a choice between a morse code exam or the code free more technical exam. Either way it should take a commitment on the part of than applicant that is more than just a desire for instant gratifcation.

If you want a no comittment radio service to be a member of that already exsists. In fact these days you don't even have to have a license for it, just buy a radio and start right being a "radio operator". With the propagation cycle about to go up, 27Mhz should soon be

experiencing a huge upswing in talking skip.

I agree the R390A is quite a receiver. I used one regularlrly from
Panama, Canal Zone during the mid 60s. I was in the Signal Corps and
R390s were standard equiptmen in their Mobile Communications Vans.
Evenings I was able to pickup US BCB stations including at the time
WABC 770 in my
hometown of NYC

We only used a 30 ft. wire strung up in a clearing in the jungle,,Was
really nice hearing hometown news and current music as the local
Panamanian station had older music and very censred news.

Oh my...so many possibilities:

Best modern tabletop: Kenwood R5000
Best modern portatop: Panasonic RF-B 600
Best modern portable: Degen DE1103
Best older tabletop: National HRO 500
Best older luggable: Panasonic RF-5000

The receiver that gets used the most is the DE1103.

Message-ID: <1138201325.034181.304700@g43g2000cwa.googlegroups.com>
Source record: 59509

Hi Ngu

I own a '7600G (never upgraded to the '7600GR; '7600G is the same radio but without as many memories and w/out the variable rate attenuator) and have owned a '909 (which I subsequently sold). My personal preference would be for the '7600GR over the '909, but I'm sure that there are plenty of '909 enthusiasts that would argue in favor of the '909. If you're into SSB reception, I believe the '909 has an edge over the '7600GR. For instance, the 909 has 40 Hz fine tuning. I'm primarily is into shortwave for the purpose of shortwave broadcast listening; for this purpose I often found the sync detector circuitry to be of significant value in alleviating problems of fading and adjacent channel interference. For SWBC listening, I'd say that, by and large, the advantage offered by '7600GR's sync detector outweighs any advantage held by the '909's inclusion of two bandwidth filters. I've also found the '7600G's sensitivity to be quite good just off of the whip alone. True, the '909 does have all of those memories and that page system. How much you value something like that is a matter of personal preference. It has never counted for much w/me. When I first got my 'SW77, I loaded up a bunch of those pages with memories, but then never really made significant use of them thereafter. The '909 is supposed to be a pretty big battery hog, as far as I've heard (although I can't personally attest to this, since I didn't run my '909 off of batteries to any significant degree). I can say that the '7600G/R is decent on batteries. The '909 offers the RDS feature for FM (station call letters and sometimes other info appear below the displayed frequency of a certain FM stations). The '909 is Sangean's flagship model and has been around for quite some time, but it never really was on the same grade as, the flagship models of Sony and Grundig ('2010, 'SW77 or Sat 700); that said, it wasn't priced in the same class as those models, either. As a compact portable for travel, it's a bit larger than the '7600 series, YB400 and all of those Degen/Kaitos; and it's battery consumption rate isn't as good. For these reasons, the '909 always seemed to me to be some sort of "in between" type of radio, and although I owned one for a time, I didn't really care to hang onto it. For a compact portable, I'd take the '7600G/R any day. For a premium, fully featured portable, I'd go for a new E1 (provided a discount were to be found; Sharper Image and J.C. Penney, when they have them in stock, often have considerable discount offers) or a used '2010 or 'SW77 (I recently picked up a '2010 in excellent condition for $200; such searching can require patience, however).
I wouldn't try waiting it out for replacements for either the '909 or the '7600GR. Sony has begun a process of withdrawing from the

shortwave market; once the '7600GR is gone, it's unlikely that you'll be seeing any replacement. As for the '909, I remember some years back (5 or 6 years ago) hearing that Sangean had a more compact radio in the works which would include all of the memory and other featuressof the '909; but then nothing ever came of it. So I wouldn't really be on the look-out for any '909 replacement from Sangean, either. I would guess that once these models are discontinued that the shortwave portable market will be the domain of the under-$100 radios from Guangdong (unless Eton proves successful in getting us to pay more for the same radios from Guangdong).

My advice, if you're wanting to upgrade to a better portable, but you don't want to take a change by going used or to fork over $420 or so for an E1, then the Sony ICF-SW7600GR is a best bet.

Best tabletop: Drake R8B

Best "portatop" (what a dumb word, but I guess we all know what it's
supposed to mean): Drake SW8 (w/sideband selectable sync)

Best portable: Eton E1

Best compact portable: Sony ICF-SW07

All that said, my first SW radio deserves mention here as being a real
gem, having provided years of service and excellent performance: the
Panasonic RF-2200.

I had always meant to purchase one of these but never did; I've bid on a few of 'em on eBay about three years back, but I guess in being less common to come by, nice units can be driven up quite quickly price-wise. I have one of those Magnavox D2999s, which is similar in terms of features; the audio on the D2999 is really quite nice.

Panasonic had quite a nice line of shortwave portables back in their shortwave heyday.

Hello all,

I want to give a word about the 909 battery consumption. I don't have (and never had) the Sony, so I will not compare.

I mostly use the 909 with the A/C adapter (at home mainly), so no battery issues. At home the A/C adapter brings no noise into the radio, even with computer working near by (the PC is on the ground floor, and the radio in the room just above, on the 1st floor).

I use batteries in hotels when travelling, since hotel's power networks seam to bring a *LOT OF NOISE*... So : using the radio on batteries more than two hours a day, during two weeks, eat half of the battery, according to the battery meter of the radio.

So far I'm happy with that result and I'm thinking of buying a set the rechargeable batteries...

Charly

Yes, I remember playing with the D2999 at EEB back in the 1980's. The audio was quite full sounding and really enjoyable. In terms of audio quality I think it ranks right up there with Grundig and other large european portables of the 1980's.

Yes, the RF-B600 is really a nice looking and sounding receiver that is a lot of fun to use. Panasonic really did a nice job on their first fully digital receiver, although it was overpriced at $600.00 when it first came out.

Of the radios I've owned.....

Best Radio: Sat 800

Other Radios Owned: IC-R70, DX-440, Hallicrafters SX-100,
Hallicrafters S-20R, Grundig Mini World PE.

Now for radios that I covet..... ;-)

Sony still seems to offer the SW7600GR but I do not personally expect them to come out with new shortwave receivers. I've heard that their discontinued 2010 model had a better synchronous detector feature, so it's unfortunate that the SW7600GR is now their top offering.

As for Sangean, I haven't really heard anything from them since I got into this hobby last summer. I don't know what they could be planning.

Do you know about the Super 909 that is offered by radiolabs.com? Supposedly, out of the box, the ATS-909 has weak AM and SW reception, and one of the mods in the Super 909 is enhanced reception. The blue backlit screen looks very cool too. More details on this package are on the radiolabs website. The price is over US$300 though.

I use a SW7600GR and I'm happy with it. The alphanumeric memories offered by the ATS-909 seems nice but I find that I hardly use memories anyway. I use direct frequency entry and scanning instead.

Indeed, you're correct. The 7600D was the same as the 2002; 7600DS was
the same as the 2003.

http://stephan.win31.de/sony76-4.htm

Nice series, the '7600 Sonys. Even the analog '7601 held its own back
in its time. Then there was the '7600DA / 7700, the styling of which
the Degen DE-1103 seems to have been modeled after.

This may not make much sense, but I used the 2002 more than I used the
2010. And the 2010 got used but it was just a bit too big to be really
portable.

That sounds interesting...got a picture?

My tube radio buy was a Lafayette KT 340 with the Q multiplier for
$5.00 at a local estate sale. It was a nice solid feeling receiver and
it worked!
It's the kit version of the 230 at the bottom of this link:
http://www.dxing.com/rx/ha225.htm

Right, the '2010, 'SW77, Grundig Sat 700, and today's E1 are certainly
a bit large for air travel, unless sw listening is something of great
priority on your trip. Plus, you don't want such radios to take the
kind of knocking that a compact portable can handle with relative ease.
I do quite a bit of road travel, where the size of these larger
portables is not such a problem. Got myself a Pelican 1450 case for
carrying the 'SW77 or '2010 and some accessories. The same case can be
used with the E1, although leaving less room for any accessories. I
have to say that I'm quite partial to this type of receiver. (and to
the semi-portable SW8). Recently made weekend trip to WVa, renting a
cabin, and got in some really good listening with using the E1 and a
WL-500 antenna: a very easy and portable set-up for such a trip, and
one which offers amazingly good performance for so little time
investment in setting things up.

That said, for overseas travel, I'll stick to the 'SW7600G or 'SW07.

Same for me, except that I would add the Lowe HF-225E to the Desktop
category.

On the "most pleasant to listen to" category, I would choose my Philips
D-2999.

The John Birch Society...wow...I hadn't given them or Barry Goldwater a thought for decades. Anyone remember the Chad Mitchell Trio take on the Birchers?

>From the early 1960's:

Oh, we're meetin' at the courthouse at eight o'clock tonight
You just walk in the door and take the first turn to the right
Be careful when you get there, we hate to be bereft
But we're taking down the names of everybody turning left

Oh, we're the John Birch Society, the John Birch Society
Here to save our country from a communistic plot
Join the John Birch Society, help us fill the ranks
To get this movement started we need lots of tools and cranks

Now there's no one that we're certain the Kremlin doesn't touch
We think that Westbrook Pegler doth protest a bit too much
We only hail the hero from whom we got our name
We're not sure what he did but he's our hero just the same

Oh, we're the John Birch Society, the John Birch Society
Socialism is the ism dismalest of all
Join the John Birch Society, there's so much to do
Have you heard they're serving vodka at the WCTU?

Well you've heard about the agents that we've already named
Well MPA has agents that are flauntedly unashamed
We're after Rosie Clooney, we've gotten Pinkie Lee
And the day we get Red Skelton won't that be a victory

Oh we're the John Birch Society, the John Birch Society
Norman Vincent Peale may think he's kidding us along
But the John Birch Society knows he spilled the beans
He keeps on preaching brotherhood, but we know what he means

We'll teach you how to spot 'em in the cities or the sticks
For even Jasper Junction is just full of Bolsheviks
The CIA's subversive and so's the FCC
There's no one left but thee and we, and we're not sure of thee

Oh, we're the John Birch Society, the John Birch Society
Here to save our country from a communistic plot
Join the John Birch Society holding off the Reds
We'll use our hand and hearts and if we must we'll use our heads

Do you want Justice Warren for your Commissar?
Do you want Mrs. Krushchev in there with the DAR?
You cannot trust your neighbor or even next of kin
If mommie is a commie then you gotta turn her in

Oh, we're the John Birch Society, the John Birch Society
Fighting for the right to fight the right fight for the Right
Join the John Birch Society as we're marching on
And we'll all be glad to see you when we're meeting in the John
The John, the John Birch So- ci- i- teee

Cleaned out the remains of my Dad's shack and that was one among many
partial radios and other old parts that were just pitched in the
dumpster.

Well, "best" could refer to a lot of things (selectivity, sensitivity, number of bells and whistles) but my *favorite* is my Hallicrafters SX-28. Really neat Art Deco styling and you can't beat the push-pull 6V6 audio going into that big PM-23 speaker. As an added benefit, the 75 pound weight of the receiver helps hold the house down during tornado season.

I dont own a digital camera or a digital camcorder.Someday,I will buy one and post some pictures of my radios,I will never post any pictures of meself on the internet though,it's not that I am ugly looking because I am not ugly looking.The only radio I saw for sale at the Goodwill store this afternoon was an Emerson cheapo AM/FM little table model radio,so I didn't bother with that radio because it is too new looking.I did buy a SUNN beta lead C-MOS Technology speaker rig thingy though for eight dollars at the Goodwill store today.Actually the speaker case/cabinet has two large heavy speakers mounted in the case.There are 13 knobs on the front of the case,one of the knobs is for Master Contol and there are 3 jacks on the front of the case and a ON/OFF switch.On the back of the case it says SUNN MUSICAL EQUIPMENT Made in U.S.A.by SUNN Musical Equipment Co.A Hartzell Corporation Company.And on the back there are two jacks each for Speakers 4 Ohms 100 Watt Max and Master Accessory Channel A and Master Accessory Channel B and there is a jack for Foot Switch.Only guessing,but I would say the whole rig weighs about fifty pounds or more and there is a slip over viny dust cover for the rig too.The rig looks to me like it is in very good to excellent condition.It is oviously a serious professional piece of equipment for a band or audiophile or whatever.I really dont need the rig,but for only eight dollars,I sure wasen't just going to leave it sitting at the Goodwill store.

Source record: 59655

Hello.

I would strongly suggest buying the Sony ICF-SW7600GR along with a Sony AN-LP1 antenna as quickly as possible. The AN-LP1 has been discontinued in North America, but several dealers, including AES and Universal, still have some - for how much longer no one knows.

The Sony radio, in addition to having a synchronous detection circuit which really enhances MW and SW reception, is built to a very high construction standard for a portable. (My oldest sample is almost eight years old.) The Sangean does not have this detection circuit which, in my opinion, is one of the most significant enhancements to AM reception since single sideband.

I have personally owned two Sangean radios - the ATA-808A and the ATS-606AP (both made in Taiwan as is the ATS-909) - both of which "died" after rather short lives. In my opinion, Sangean radios are not constructed with a great deal of integrity. The Sangean ATS-909 has more "features" (though none of really great importance) than the Sony, but, frankly, having been "burned" twice, I would not buy or recommend one. I have never had even a single problem with ANY of my Sony portables (two ICF-SW35s, two ICF-SW7600Gs, and five ICF-SW7600GRs, as well as five AN-LP1 antennas).

If you are interested in the Sony SW radio line, I suggest you act very soon.

Best,

Joe

Au contraire, mon frere...it can and *has* happened!

And you're sort of half right. Emergency communications by Morse is quite rare (but not unheard of).

On the other hand, voice and digital ham emergency communications are quite common. The final edit of a short video that I wrote and produced regarding ham radio emergency communications for the Farmington Hills (MI) cable system was just completed and is now being broadcast. Once a few minor legal hurdles are ironed out, it should be available through the ARRL.

In the meanwhile, let me refer you to the generally complimentary article about ham radio emergency comms during Hurricane Katrina that appeared on the *front page* of the September 6, 2005 'Wall Street Journal'. (Commercial cell towers out, Telephone Company Central Offices out, minimal interoperability between public service radio systems; i.e., virtually all of the commercial stuff fell flat on its face).

As the ARRL likes to say, "When all else fails, Ham Radio!"

Hello,

Joe Analssandrini adviced to buy Sony because of its quality and sync detector and also because of bad experiences with Sangean radios.

I agree Joe that the Sony has the sync detector. If I had to buy a new radio today, I possibly go for that one, or a Super 909. I "only" own a regular 909 bought in early 2002. It is now 4 years old and so far ... I'm lucky with it!

Reception is ok off the whip for me, but perhaps I should try another radio (this is my first and only one) before giving a final note. With an external antenna it gives very good results. I've tried so far :
- ANT-60 reel antenna (23 ft wire)
- home made coax loop (cut for 5 Mhz)
- home-made random dipole
- Kaito KA31 active antenna (same as Degen DE31)
The two last give the best results (I have to study the dipole a bit more, I suspect it gives better results than the Kaito antenna...).

In fact for me the choice will be :

Sony sync detector vs Sangean memories and RDS

(I'm in Europe and RDS is widely used here)
It is realy a matter of personnal choice.

Else there is also Degen/Kaito 1103 and 1102 radios that are said to be good for a much cheaper price. But this is another story.

Both the Sony and Sangean are good in my humble opinion... The fun of this hobby begins with the radio, but then continues with antennas, a infinite field of study and experiments :-D

But saying so will not help much NGU to decide perhaps... :-)

This has come up frequently in conversations I've had with long-time hams. While I don't disagree with you in principle, there is no way the FCC is going to toughen up the exams. They've been lessening the entrance and upgrade requirements for years. I doubt the ARRL would support any tougher test structure, as that would be detrimental to the numbers of newbies coming into the hobby... to which many long-timers say good, because we should value quality above quantity-- such would result in fewer, but more knowledgable hams.

I have mixed feelings about his, however... perhaps too few people using our allotted spectrum might give the FCC greater cause to take away what we've got due to relative lack of use?

Actually it was a trio singing this "tribute" to the Birchers. In 1970
Bob Dylan did his own ode to the J.B. Society. In keeping with the
times it was far more direct an in your, er their face.

Well, I *didn't* go to devilfinder, so not quite sure what a BC-344 is,
but I am familiar with a BC-348 and as a matter of fact own one.

It is a WWII aircraft receiver, 200-500 kc/s and 1.5 to 18 mc/s, single
conversion, BFO, crystal filter. It was my dad's receiver and he gave it
to me along with an Elmac transmitter when I got my Novice ticket (and a
good reason for him to get a new rig--we drove to Benton Harbor and he
got a brand new Heath Mohawk and Apache rig--but that's another story). :-)

Apparently it was quite a popular receiver and relatively inexpensive in
the decade after the war, lots of "conversion" and modification ham
magazine articles, but I'm not sure about "cult".

73,
Carter

I've used the 606A as a knock-about radio for about 5 years now. It has held up pretty well, by and large. Only once did I have a problem - when the LCD temporarily went out (for about 2 days) during a monsoon season in the Western Ghats. I guess that was attributable to the excessive moisture in the air.

I will agree with you, though, that Sony radios seem to be built to a higher standard, although I don't know why they couldn't put a half-way decent FM section in the 'SW77.

Glad to hear that the '7600GR is workin' out for you. It's easily one
of the best deals going out there, in my opinion. The day that Sony
discontinues this model will be a sad day indeed, since we'll most
likely not see any replacement model from Sony.

Sony 7600GR On sale
http://www.etronics.com/product.asp?stk_code=sonicfsw7600gr

Use the money you saved over the ATS-909 and also buy the Sony AN-LP1 active antenna.

Along with the 7600GR's Sync Detector for digging out weak signals the addition of the AN-LP1 will blow the socks off the ATS-909 and anything else it is price catagory.

The BC-344 is the 110V version of the BC-312?

150kc to 1,500 kc. Form factor same as BC-348. 70 pound aircraft
receiver?

Check-Out the two YAHOO Groups for Sony ICF-SW7600GR Owners.
* Sony ICF-SW7600 / G / GR eGroup
http://groups.yahoo.com/group/7600group/
* Sony ICF-SW7600GR eGroup
http://groups.yahoo.com/group/7600GR/

Battery Life :
I have not Timed them and Recorded the Battery Life of both Radios :
But my general impression is that the Sangean ATS-909 (RadioShack
DX398) sucks-up batteries faster then the Sony ICF-SW7600GR.

Question - Has anyone actually Timed the Sangean ATS-909
(RadioShack DX398) -vice- the Sony ICF-SW7600GR Side-by-Side ?

Re-Chargable Batteries :
In either case with most 'portable' AM/FM Shortwave Radios where
man-made-noise is an issue and the use of Batteries for Power is
recommended for improved receiption. Then the use of Rechargable
Batteries is highly recommended as a way of greatly reducing the
Cost of Battery Operation of the Radio.

just my two cents worth - iane ~ RHF

I have just put together a compact but very good system shortwave listening system for newcomers that want simplicity but good performance or those in apartments that can't put up a big antenna !!

first I took a Kenwood R-600, this is a very compact communications receiver, this is not a cheap toy, much of the circuitry is based on the R-1000. the R-600 as with many receivers has poor selectivity in the SWL (wide) filter position. I have replaced the wide filter with a very high quality 6kHz filter that really selects the stations while allowing excellent fidelity ! this set sounds nice for taking up such little space. for tough listening the narrow AM filter is quite good selectivity wise while offering limited fidelity.

next I took an Ameco preamp and designed a nice whip antenna for it. now you can tune in the signals you want and reduce interference from out of band signals. the Ameco is AC based so you don't need an AC adapter or batteries.

with this combo, there is very little space needed and I have pulled in 10 KW stations from south america like locals with the preamp engaged.

I think this system would be great for someone who wants a very simple set to operate or someone who wants to put a set in the corner and not take up a lot of space and have wires all over the place.

price is $195 plus shipping.

usually when I sell a set I include antenna wire and a nice external speaker but in this case it is not needed !!!!!

email me DIRECT at mmaghakian@yahoo.com for more info and pictures

Well, I just bought my first SW receiver and I have very little experience with listening to SW.

For a start, I am looking for a few higher-powered and good quality stations to make sure everything is working properly and to set the standard (for me) for decent reception. Can someone post a few of the better stations, frequencies, and best listening times? I am located in eastern Canada.

Thanks

I have had both. I bought a 909 to replace my fried ATS803A.
The 909 has more gee whiz features, RDS, many memories, alpha tags for
memories etc.
I bought the Sony 7600GR as well.
Performance off of the whip was beter on the 7600, and I grew tired of
the 909's gimmicks, so I sold it.
I did like the fact that the 909's dial light stayed on when hooked to
an AC adapter.
I have since found a brand new never opened ATS803A and an Emerson
ATS803 (exactly the same except no wide/narrow switch as the 803A and
cosmetics)Just like the feel of the larger radio.
The 7600 is now my travel radio and is excellent in that regard.

Just my $.02

I tried the 7600 and was very disappointed in the sync function. It made no discernible difference in reception. This may have been an isolated situation, but I remember others complaining about the same thing.

I finally bought the 909 and later a dx398 as a back up. Both radios are working fine. It may sound strange, but the fact that this radio had a real tuning knob in addition to the keypad swayed my decision.

>>are a fair number of projects out there to do just that. However, depending
>>on where you are, you can typically only hear WWVB for a small part of the
>>day.

For information on the WWV, WWVH, WWVB time codes and signal
strength, go to: http://tf.nist.gov/timefreq/index.html

From the coverage diagrams (every 2 hours), most of the
contiguous states of the USA get sufficient signal from
WWVB in any 24-hour period. That has been observed here
(Los Angeles County) using a 2 1/2 foot diameter loop;
distance to Ft. Collins is roughly 800 miles (?).

By actual test, my LaCrosse radio wristwatch was able to
sync on WWVB on an auto trip to Wisconsin and back over
September to October. Typically such radio watches only
begin checking/syncing after midnight local time. The
internal quartz timing oscillator remains stable (for
time indication) within one second in 24 hours.

Radio clocks are consumer electronics items that typically
cost $20 to $30 (depending on display size and extras such
as local temperator). If all that is wanted is automatic
time setting, it may not be a good return on time
investment to build one's own automatic-setting clock.
Those radio clocks aren't much good for zero-beating a
local frequency standard except: If the local standard
is counted down to 1-second pulses for comparison with
the radio clock (arduous process to check).

>>The same time code is in the WWV HF signals as a 100 Hz, One Baud, pulse
>>duration modulated subcarrier tone. If you've only got a communications
>>grade speaker in your receiver, you may not notice it.

There was once a KIT for a WWV time code receiver (Heathkit?).
As memory serves, it cost about $400 just for the kit! That

was in much older days before 25-cent 74LS00 chips.

The original requestor wanted a WWV receiver, presumably to zero-beat a local crystal standard. ANY HF receiver will do for that, but preferrably one whose S-Meter can show very slow beats (well below 100 Hz). As another suggested, a cheapo import SWL receiver can do that, adding only a metering connection to the internal AGC line (for the slow zero beat). Bandwidth of the IF is not of great importance since the time-frequency bands are wider than the usual cheapo receiver IF bandwidth.

In the northern Los Angeles area, I've never had a problem picking up either WWV or WWVH on 5, 10, or 15 MHz, even with a few feet of hook-up wire as an antenna. That's over a 42 year residence in this same house here. The time ticks are good for checking progressive aging of local frequency standards which are counted down to 1 second output...that compared with the time tick in delay...and delay change (to indicate very slow changes in the local frequency standard).

The time tick method was once the ONLY precise way to check out local L.A. frequency standards when WWV was located back east. That preciseness was to better than 1 part per million.

A simple TRF arrangement tuned to 5 MHz will do the trick for a receiver used solely for zero-beating and hearing the voice announcements and time ticks. The interstage tuning will be stable enough to pick up WWV or WWVH. To get 10 or 15 MHz carriers, add a mixer to the antenna input with a local oscillator of 5 and 10 MHz. A local frequency standard can supply that; no extra LO crystals required. Four stages tuned to 5 MHz with Q = 100 will result in an overall TRF/IF bandwidth of about 20 KHz, quite adequate for WWV/WWVH.

>

Signal loss in the passive will be between 3-5db per port. That's about a halving. Depending on the gain of your antenna, that may be an issue. It may not. For more than two ports, and for better isolation between rigs, you'll need an active device.

I've used the splitters by ICE and by Stridsberg. Both are quite adequate for the purpose. ICE has a bit more bottom end to the bandwidth, but that's less of an issue than it sounds.

In practical terms, for most installations, one is as good as the other.

You need to tune the antenna in conjuction with the radio. It's a bit
of a pain in the DxAss. I know someone who got a select antenna at the
local flea market and found it to be effective with a Sony 7600.

I personally don't like tuned loops (which is what the select antenna
is). If you have a decent radio, it is better to just use a loop like
the Wellbrook, and let your radio do the filtering. In fact, when we
did comparisons with the Kiwa and the Wellbrook, you couldn't tell the
difference between them on his R8B. The Wellbrook had a higher reading
on the S-meter, but when you use amplified antennas, the reading isn't
as important as how the signal sounds. That is, with front end gain,
you can get just about any S-reading you want.

http://www.ccrane.com/antennas/am-antennas/select-a-tenna-regular-model.aspx
My recollection from seeing this in the flesh is the plastic was kind
of cheesy.

> How do you search the call sign directory -- is it set up by city -
> name - ??

Go to www.qrz.com click on "name search". It's really a free form text
search, so you can enter "smith" or "philadelphia" or 90210.

Be careful with place names like "Beverly Hills". It's and OR search,
so you get hams from Beverly Hills, and hams named Beverly or Hills,
and hams whose street or city names include Beverly or Hills.

If you are looking for a name, it may take some work. For example,
"joe walsh" does not find the famous one, "joseph walsh" does.

73,

Geoff.

You never did say where you lived. If you lived in a big city, it's likely
that you did meet the hams at the test beforehand. If you lived in a
rural area, you might have come from a relativly long distance.

For example, If I have to take a test to upgrade to Extra, the nearest
place I can go is Kuwait. The Israeli government specificly asked the VECs
to not test here.

I've had an Original Se;et A Tenna
now for over 10- years. It works
very good with some radios and not very well with others. I use it with
my Zenith Transoceanic R7000-1
and it does a terrific job, pulls the sifnals out of the "mud". The
original only works with radios that have builtin ferrite rod antennas.
It's kind of cheesy looking, yes for sure. But it is relativly cheap
and works well and LASTS. Very well made annd once bought it costs
nothing to operate.
I ytoed it with a neighbors ATS909 and it was mediocre at best. He bit
the bullet & bought one of to Twin Ferrite loops from CCrane ..it
worked well with the 909 and no better then the Selectatenna with my
Zenith. Evidently the ferrite rods size
and position in whatever radio used is a big factor.

I'll just list a few reliabe stationd
tat are usually heard without a problem on the East Coast of NA.
Hours are Local EST)

BBC 5975 khz. (evenings)
WBCQ Maine)
5110 khz (Evenings)
7415 khz) Late Afternoons & eves)
9330 khz. (eves

R. Havana Cuba
6000 khz (eves)

Also if you Gogle Primetime Shortwave they have
a regularly updated list of stations to download.

Hint : Depending on your receiver you can put your favorite frequencies
in memory so you can check them regularly.

Remember propagation may prevent you from receiving stations at some
times.

During the killer 1990 solar max I was getting 26 MHz Auxilliary
Broadcast links from the upper Midwest reliably in Houston all day
long. I also remember listening to Iceland on 21 Mhz every Saturday,
coming in like a local.

A tube radio can be extremely quiet.

Source record: 59773

PERMISSION TO REPRINT GRANTED, WITH LINK TO
http://www.blackboxvoting.org

Convicted of 23 felonies for computer crimes, Jeffrey Dean
was sent to prison for four years. Shortly after his release
from incarceration, his company was awarded one of the
largest ballot printing contracts in history.

In a 2003 deposition, Dean states that he was a scapegoat
who was left holding the bag in a series of unapproved payments
from Culp, Guterson & Grader, one of the most politically connected
law firms in Washington state.

One of this firm's partners at the time was Egil "Bud" Krogh,
who headed the White House "plumbers" unit under Richard Nixon.
Krogh ordered the burglary of Pentagon Papers whistleblower
Daniel Ellsberg.

Dean claimed that other persons from the firm were involved in
a scheme, and upon discovery of illicit payments (averaging
$14,000/month) he was made to take the blame. Krogh was a
partner at Culp Guterson & Grader during the time period that
Dean was receiving illicit payments of approximately $15,000
per month.

Like Jeffrey Dean, Krogh did time in prison -- four months for
Watergate-related crimes. He was disbarred, but after a fight
from a Culp Guterson & Grader attorney, his credentials were
restored. At the time, the firm was called "Culp Dwyer Guterson
& Grader."

'He [Krogh] was hired on the merits of his character, intelligence
and skills as a lawyer,'' said William L. Dwyer, the firm's senior
partner, who had represented Mr. Krogh in his disbarment fight.
Dwyer became a U.S. district judge.

DEAN BECOMES A BALLOT PRINTER

Shortly after Jeffrey Dean was released from prison a company
owned by his wife (but run by Jeffrey Dean) was awarded one
of the largest ballot-printing contracts in history, with King County,
Washington. In SEC documents, this company (Spectrum Print & Mail
Ltd.) lists assets located in the Seattle area, British Columbia, San
Francisco and in the Norwalk (CA) location that houses the Los Angeles
County Elections Division.

DEAN DEVELOPS COMPUTERIZED ELECTION SYSTEMS

According to depositions taken in 2003, Jeffrey Dean programmed the ballot sorting software used to process incoming and outgoing mail-in ballots; he also developed the Vote Remote software used to track and authenticate mail-in ballots.

Key logs from King County Elections show that Jeffrey Dean was given intimate access to the GEMS server (Diebold central tabulating software); internal memos from Diebold refer to an ongoing consulting arrangement with Dean, and document that he had management involvement in the touch-screens, the 1.96 version of the optical scan,
the votercard encoder and the Windows CE operating system used in Diebold voting machines. In addition, during recent litigation Dean called
Peter G. Martin as a witness, indicating that he had worked closely with
Martin, who programmed the new upcoming High Speed Central Count system.

RECENT DEVELOPMENTS WITH THE DEAN FAMILY

Black Box Voting has learned that Jeffrey Dean and his wife Deborah have recently been ordered into Chapter 7 bankruptcy by a trustee who become fed up with their "gamesmanship" in recent attempts to obstruct discovery of their assets.

A 25 YEAR HISTORY OF TROUBLE

Jeffrey Dean has a 25-year history of financial problems, tax liens and litigation, going back to a company he formed while working for Boeing. Though he refers to this company in recent depositions as "Astec," its real name was Advanced Systems Technology, Inc., a company run by Dean and partner Michael C. Redman. Dean represents that this company did aircraft design, and says that he sold it to Raleigh-Durham Aviation in 1980. Legal documents show that he had a $700,000 tax lien imposed on him in connection with the "failed business" in 1984, and several creditors filed civil suits against him in 1979 and 1980.

By 1982, Dean was a contractor for Culp, Guterson & Grader. Assets began accumulating under his wife's names. When Dean divorced his first wife and married wife #2, Lorimay, she began accumulating real estate under an entity called "JAL Investments Inc." This entity and its real estate was transferred to Dean's third wife, Deborah M. [Pederson] Dean.

These efforts failed when it was revealed that over $180,000 of inappropriately received funds were spent on Deborah Dean's house, and that Deborah had been cashing checks as large as $10,000 at a time from the illicit funds.

Although she was involved in litigation over restitution issues, Deborah Dean was not prosecuted in the thefts from Culp, Guterson & Grader.

Jeffrey Dean entered an Alford Plea admitting to 23 felony counts, and was ordered to appear at the Shelton Correctional facility to begin his incarceration. Instead, he failed to show up and went to Oregon, where he apparently lived under a different name. Bench warrants were issued and he went to prison.

Meanwhile, wife Deborah began "Spectrum Print & Mail Ltd." According to depositions, this firm was mostly delivering newspapers to contract deals like the Washington ferries.

Shortly after Jeffrey Dean got out of prison, however, Spectrum Print & Mail got into ballot printing and designing software for elections.

This ballot printing plant, using software Dean claims to have developed, handles ballot printing and mail-ballot processing for counties like King County (WA) and Los Angeles County, Fresno County, San Diego County, Alameda County (CA), and for the state of Georgia and many other locations.

The Deans were rewarded for Jeffrey Dean's ballot printing and election software programming work in a $4 million buyout by Global Election Systems shortly before election 2000. The Deans became the largest stockholders of Global Election Systems, and Jeffrey Dean took a position on the board of directors.

In January 2002, Diebold Inc. purchased Global Election Systems. Oddly, in a 2003 deposition, Jeffrey Dean claims that his contact with Global was always Pat Green -- but Green is a Diebold employee, not a Global Election Systems employee. Yet Diebold claims it hasn't worked
with Jeffrey Dean.

The Dean's ballot printing company was acquired by Diebold in the Global Election Systems acquisition.

WHY ARE WE DOING THIS?

The Vote Remote software and the absentee ballot processing software developed by Jeffrey Dean was never submitted for certification, has not been examined by anyone, and due to technicalities i
n the certification regulations, is not subject to certification. Several
counties have recently announced plans to force voters into all mail-in
voting, including King County, Jeffrey Dean's first elections client.

Exactly what Jeffrey Dean was doing to the GEMS database program, what "oversight" he was providing to the touch-screen technology purchased by Diebold, and what expertise he provided for the votercard encoder, the optical scan 1.96 series, and the upcoming High Speed Central Count are not publicly known at this time.

DIEBOLD CLAIMS MERIT FURTHER SCRUTINY

Diebold claims that it did not work with Jeffrey Dean after acquiring Global Election Systems in 2002. However, the Dean depositions reveal that in May and June 2002, during the time the "rob-georgia" patch was created, Jeffrey Dean was called back to do consulting for Diebold. The Deans have been accused of obstructiveness and evasion by attorneys seeking to recover funds in a pending bankruptcy case. Specifically, when asked to identify monies paid by or due from Diebold Election Systems, they omitted answers.

YA'LL COME BACK NOW: DOCUMENTATION GOING UP SHORTLY

Depositions, documents, and supporting documentation will be posted on the Black Box Voting Web site this week. These documents include depositions, bankruptcy papers, criminal court records, SEC documents and civil litigation records.

Jeffrey Dean prison records:

If the availability of inexpensive consumer goods from China is the real threat, then the problem isn't WalMart. The problem is all the people to demand cheap goods and keep buying from WalMart, Target, etc. If all those customers (we) didn't support WalMart then Wal Mart would not exist. To kill Wal Mart all you have to do is convince enough people to forgo low prices. That will be an uphill battle. Are you ready to search out the high priced local merchant with limited selection?

It's ironic that Toys R Us is being driven out of business by even cheaper prices from Wal Mart. Toys R Us became successful in the 1960's because we abandoned the local toy store with their higher prices.

So, Floyd, can you tell me just how much induced power line noise
you'll get on a piece of .750" 75 ohm hardline that is already carrying
up to 30 A at 60 VAC supplied by a CVT? Those trunk amps, line
extenders, bridger modules and return amplifies are rather power hungry
and its a lot cheaper to line power the system than run 120 or 240 to
every amplifier like they did in the early tube CATV systems.

> (You will be *very* hard pressed to find any lead sheathed telco
> cable still in service today.)

I saw piles of it recently that had been pulled from what had been
rural areas where they were being converted to underground trunk lines.
It was supposed to have been the last lead cable still in the area.
There was probably 50 dump truck loads waiting to be sold for scrap
copper and lead. Obviously, there has been no new leaded cable
installed for decades, but some small mom and pop systems still had it
in service when they were bought out, and some business had it strung
between buildings on their property.

Even though you don't see lead cable, a lot of CATV ire is hung with
3/16" or 1/4" messenger cable that is grounded at every pole. After the
last two years hurricanes I saw a lot of downed power lines tangled in
messengered cables, or caught on line amps and taps. They had to go
down the end of each line to examine all of it before they could turn
each section back on.

The question isn't whether a test should be applied, but what questions should be asked in the test. Or said another way what questions if answered correctly will give some indication that the test taker understands concepts like safe, efficient and courteous operation of the equipment.

If we were to test prospective hams on their ability to safely set up a rig and antenna for transmission and combine that with written questions about radio theory that would provide some level of assurance the guy wouldn't fry himself or cause interference to neighbors. If we also required prospective hams to be observed in actual operation of the radio we could test somewhat for their ability to conduct courteous and efficient communication in the most commonly used mode - voice.

Requiring that a test taker be able to translate dits and dahs into letters is only proof that the prospective ham has some command of a little used language - morse code. It does nothing to show that the prospective ham can operate a station effectively, safely and courteously. It is akin to requiring that prospective drivers also be able to use a buggy whip.

My local merchants have a wider selection that WalMart.

If I go to Newhall Hardware I'll find a much wider selection of stuff
than at WalMart. Sure it costs a few cents more, but buying from Wal
Mart is false economy because you'll pay more in the long run when the
USA dries up and blows away.

Go for it. I have a hardware store like that too that has a better
selection of screws and plumbing parts. I do business with them as
much as possible, but there are some things that Home Depot can supply
that they cannot. WalMart in my experience has a very limited hardware
department.

Hi Ngu,

If you're needing a fuller idea of the various features offered by each
of these sets, you might visit the radiolabs website and download the
user manuals for the '909 and 'SW7600GR:

http://www.radiolabs.com/support/downloads.php

I'm surprised the previous owner took the time to install the shielding. I don't recall that being a recommended mod' for the DX-394. Does it still have the original label on the rear which gives the model and serial number? The ferrite rod antenna is mounted on the top circuit board inside the case. This is for MW (AM) reception. The shielding must have reduced or even eliminated the effectiveness of this antenna. How is reception on the AM band (525-1615)?

An American Hitler and his Gestapo.

By DOUG THOMPSON

Jan 23, 2006

The U.S. Department of Justice, led by Alberto "The Constitution is an outdated document" Gonzales, wants to know if you've been looking at any racy material on the Internet.

Yahoo and MSN have already complied with subpoenas from Gonzales' storm troopers demanding records on who is using their search services to look at porno sites on the Internet.

Google, to their credit, said no and is now caught in a tough legal fight against the George Bush's Gestapo.

Ohmigod! Did he say Gestapo?

Damn right I did.

If you don't think the rights-robbing, privacy-invading, Constitution ignoring administration of George W. Bush is anything less than a Hitler-style Gestapo then you've got your head stuffed so far up your ass that all that brown stuff is blinding you.

America, once hailed as the land of the free, has -- under the tyranny of King George -- become Amerika, reviled as a global thug that doesn't give a damn about anyone's rights, especially those of its own
citizens.

Protest if you want.

Spout the Republican Party line is you can without gagging.

I don't give a damn.

If you believe George W. Bush is anything less than an American Hitler then you're too damn dumb and stupid to argue with anyway.

Bush is an evil man, a power-grabbing despot who believes in absolute rule, a madman so wrapped up in his perceived role as "a wartime President" and "Commander in Chief" that he believes no law applies to him or his rotting, corrupt, administration.

The Constitution?

Why it's just "a goddamned piece of paper" to this insane megalomaniac.

Legal scholars agree that Bush blatantly broke the law by ordering the National Security Agency to spy on Americans without warrants or court review.

The only cretins who support this dictator are the brain-dead Republicans who put power above the law and party loyalty above their country.

Bush is a traitor to his country.

As a traitor, he should be led from the White House in chains and tried as one.

Since he insists he is a "wartime President," then let's try the son-of-a-bitch as a wartime traitor, a Benedict Arnold who turned on his country and gave aid and comfort to its enemies.

Bush has done far more damage to the freedoms and security of American than Osama bin Laden.

In fact, I'm starting to believe the traitorous asshole is in league with bin Laden and others who want this country destroyed.

No true American would treat the Constitution with the contempt that spills like toxic bile from the lips of George Bush.

No true American would continue to support this maniac as he continues to dismantle what once was the greatest country in the world.

Bush is clearly guilty of high crimes against the Constitution of the United States.

It's time to give this reincarnation of Adolph Hitler exactly what he deserves.

"What luck for rulers that men do not think."

Adolf Hitler

Hey Starsky moron, here's a reality flash. The frequencies you keep pushing for your little cb chat are Enigma Frequencies. What an idiot. You are right, after they catch you, and they will catch your arrogant ass, it will be "-- *PLONK* *PLONK* bye bye byeeeeeeeeeee"

Since you clearly know everything about radio I shouldn't have to tell you that these are international spy frequencies idiot. Go ahead, look it up, cause you're a know-it-all and won't believe anything anyone tells you. I'd think that if you really liked pirate radio as much as you claim, you wouldn't be going out of the way to piss of the people who do it. Maybe your wife can explain it. Gads, maybe it will be years before you come back after jail time for messing up international spy freqs.

Based on the idiocy you've exhibited here, you won't stop and that's good, we'll be done with you for good. You're stepping on international toes moron.

Bye Byeeeeeeeeeeee asshole!

Best: Ten-Tec RX-340

Others: ICOM IC-R8500
WinRadio G303i (early adopter)
Collins R-392

Now, which I *prefer* to use depends on exactly what I'm doing. The
'8500s are within easy reach of my computer, so if I hear about an
event going on, they're a quick setup. With the exception of poor
dynamic range and poor rejection, the '303i is a fun radio with
surprisingly good performance and audio.

If it's hard to pick up or being interfered with, the TT is the way to
go.

The '392 is an amazing machine but gets exercised least.

Again, true, but only partially... If people had reasonably well paying jobs, they weren't being "outsourced" and "downsized" at an alarming rate and the middle class wasn't disappearing at an alarming rate, then you are right--people wouldn't have to shop at Wal-Mart...

Remember, President Bunnypants told us that "Outsourcing is *good* for this nation".

P.S.

What David is saying is that China is *economically* burying us, arguably a truism. (Ironically, what Khruschev threatened to do to us 40 years ago).

I'm not sure what your point is there. Virtually all telco
multipair cable is 1) shielded, and 2) grounded at each end of a
section, if not at each pole, plus 3) all messenger cables are
grounded.

> in
> eastern Canada.

Jeff:

Check http://www.primetimeshortwave.com/ for a comprehensive schedule
(based on UTC, coordinated universal time).

Try WWV and WWVH:
5000 / 10000 / 15000 / 20000 khz. Lower frequencies at night, higher
frequencies during the day.

Next I'd recommend learning what the broadcast bands are, and try
scanning through them. On this Wikipedia page, see the section labeled
ITU Frequency Allocation: http://en.wikipedia.org/wiki/Shortwave

Good luck and let us know what you find. I'm also curious about which
radio you have.

Last time I looked the national unemployment statistics did not show an
"amarming" increase.

What statistics do you have to show that the middle class is
disappearing at an alarming or less-than-alarming rate. In my
experience people don't really "have" to buy at WalMart. But they
chose to do so because they are accustomed to finding the lowest
discounted price.

>
> Remember, President Bunnypants told us that "Outsourcing is *good* for
> this nation".

Actually outsourcing, either nationally or internationally is nothing
new, and neither ius moving production offshore. For example Ford and
GM have had overseas manufacturing plants for many decades.

>

I'm not sure what being buried economically by the Chinese really means so I'm not sure it is any kind of an ism, true or otherwise. If you mean we are buying inexpensive goods from them, well the solution is simple...just buy expensive goods from someone with higher prices. If the term means something else, then please explain it to me.

And as a footnote Mr., K's threat to bury us was pretty much an empty one now wasn't it. Turns out he barely had the national resources to build his military, but only at the expense of domestic comforts.

IMO- Not a good idea. The TV antenna jack in your room is probably connected to coax cable which is shielded and would not be a good antenna for shortwave. You could also pick up a lot of noise from televisions which are connected to the system and possibly other appliances in the house.
OTOH- If the TV jack is connected to flat unshielded TV wire, you might get some improved shortwave reception but the noise could still be a problem.

Via Hard-Core-DX web site:

http://www.hard-core-dx.com/index.php?topic=HCDX

The Finnish well-known DX'er Simo S.
Soininen is just now
in Santo Domingo, Dominican Republic.

Simo sent me last night an e-mail where
he says he has met Teo
Veras. They plan to activate Radio
Cristal shortwave
transmitter on 5010 kHz next weekend.
Listen to 5010 kHz!

I'll send more info in the near future.
However, it seems
that Internet-connections in the
Dominican Republic aren't
very reliable. This is all I know now
after one short e-mail.

Yep. And putting aside the whole debate over whether or not the code
is an anachronism, I can't imagine that learning Morse would be *that*
arduous a task, especially if you're only talkin' about 5 WPM. The
code is relatively straightforward. Standard Roman alphabet as we use
in the English language. Then you've got your numbers and minimal
punctuation. No special characters to speak of.

Radio Taipei International has a very strong signal relayed from
southern Florida.

http://english.rti.org.tw/Others/Frequencies.aspx

2:00-4:00 UTC on 5950Khz

2:00-3:00 UTC on 9680Khz

7:00-8:00 UTC on 5950Khz

They have some interesting programs.

There is a very powerful relay in Sackville, Canada, that several
international broadcasters use. If you aren't too close to it, and have
the signal skip over you, you should have no problems hearing a variety
of stations from it.

I'm still a bit newbie myself but learning. I hope this helps.

>
> Last time I looked the national unemployment statistics did not show an
> "amarming" increase.

"Alarming" is my word but the pace is picking up. I don't believe the statistics you looked at are new enough to show the tens of thousands of Ford and Daimler Chrysler downsizings and plant closings that were announced earlier this week or the airline that went under a few weeks ago. Also, please don't overlook the commonly accepted fact that whenever "x" number of people are thrown out of work, 3 or 4 or 5 times "x" are also hurting; i.e. the restaurant across the street from the closed auto plant: they sell less food, the food suppliers feel the pinch, owner needs fewer waitresses, they sell less lottery tickets because the auto workers aren't there to buy them so the State gets less revenue, the "downsized" worker can't afford a new car, etc, etc, etc...I think you get the idea.

> What statistics do you have to show that the middle class is
> disappearing at an alarming or less-than-alarming rate.

Again "alarming" is my word (allow me a little poetic license), but *several* articles in the past 8 or 9 months about the decline/demise of the middle class appeared in the Detroit News and the Wall Street Journal, both considered quite conservative papers (unless you happen to be to the right of Attila the Hun...)

> In my
> experience people don't really "have" to buy at WalMart. But they
> chose to do so because they are accustomed to finding the lowest
> discounted price.

Well, I'm glad you prefaced your statement with the phrase "in *my*
experience", which may well be different from many Americans. Again, in
that commie pinko rag, the WSJ, they recently had a statistic that in
general and for the entire country, the savings rate is actually
negative--an all time low since 1929-- (meaning *zero* savings and that
they are dipping into whatever equity they have to keep their head above
water). Another interesting article in the Detroit News about stories
that real estate agents tell about the number of $300,000-$500,000
houses that are outfitted with a card table and three folding chairs
(because they can't afford the 4th chair). So, yes, there are at least a
couple of reasons why people *do* "have" to shop at Wally World.

That is absolutely true---but guess what? It's finally coming home to
roost. Time to pay the piper. It finally caught up with us. It's
starting to bite us in the ass. Ross Perot's gigantic sucking sound has
finally come home.
>

>> What David is saying is that China is *economically* burying us,
>> arguably a truism. (Ironically, what Khruschev threatened to do to us 40
>> years ago).

> I'm not sure what being buried economically by the Chinese really means

Uh...no jobs for Americans???? A lower standard of living for us???
Again, go to Wally World. About 80% of their stock, give or take, made
overseas or to state the obvious, NOT made here. Cake pans, bed pans,
brake pads, clothes, electronics, A to Z, you name it--it all equates to
less jobs for Americans (and therefore a lower standard of living for
us and a higher standard of living for them).

I could make the case that the people buying at Wally World is an
indicator of how *bad* the economy is; i.e., Wally World is all they can
afford with either no job or a crappy job.

> so I'm not sure it is any kind of an ism, true or otherwise. If you

Sorry, too dumb to warrant a response...

> If the term means something else, then please explain it to me.

See all my comments above.

> And as a footnote Mr., K's threat to bury us was pretty much an empty
> one now wasn't it.

I realize that. It's so intuitively obvious, I thought *you* would have realized it too. I never said he did. As previously stated, I just pointed it out for the *irony*.

Did they all get laid off in one fell swoop on Monday, 'tard boy? Or, are they still working, waiting for a plant closure in the future, at which time they'll show up on the unemployment rolls, but not now.

You sound like a disgruntled union worker.

I did talk with a UAW member on Monday and he felt that when the plants do close that all those folks should be given full pay (and benefits) until they reach retirement age. He even told me that the Constitution guaranteed that!

Needless to say, I was LMFAO.

So far I don't see a doom and gloom dominoes type collapse occuring.
We ran those scenarios when Chrysler was bailed out in 1980 and came up
with some dire predictions for several regional areas, all of which
turned out to be flat out wrong. The problem with dire economic
predictions is that it is all but impossible to account for human
behaviour when individuals are sorting out economic options.

With a paper and online subscription I read the WSJ daily....I have yet
to see an article that predicts the demise of the middle class. If you
know the month I can search the online archives.

> that real estate agents tell about the number of $300,000-$500,000
> houses that are outfitted with a card table and three folding chairs
> (because they can't afford the 4th chair). So, yes, there are at least a
> couple of reasons why people *do* "have" to shop at Wally World.

There will always be good stories about people specing in houses with a
shoestring budget. Did some people get carried away with real estate
buyers mania over the past 36 months - no doubt, especially those who
built escalator clauses into their written bids and bought with no or
low down financing. But there are a lot of people who don't own their
houses with such risky financing. Some will probably get burned in the
next 24 months, but that will be a valuable if costly lesson.

The "savings rate" that is quoted so often is never explained in
detail. Hopefully it is not as simplistic as I think it might be. Any
ideas about it's computation....

I haven't seen anything nibbling yet alone biting at the national
posterior. Time will tell I suppose, but Ross Perot would be the last
individual I would visit for information on the economy. He lost any
attention I might have given him with that hairbrained (and self
centered) flat tax proposal.

And just when does this doom and gloom scenario happen. I remember
similar doom and gloom scenarios after the 1980 Chrysler bailout and
the numerous times after they shrunk their workforce. I also remember
the steel plants closing, AMC going south, Japan being forcasted to
take over all U.S. real estate, the oil patch going through agony,
numerous real estate markets tanking and S&L's requiring a federal
buyout. All of those economic hits were predicted to take the american
economy down so far that recovery would be impossible. For all of the
rightsizing, downsizing, outsourcing, globalizing that we've gone
through over the past 2 decades the economy has absorbed those workers
overall into other jobs. We are still sailing along.

Actually my snide comment has more than a bit of truth buried within.
WalMart does not create demand for its products and services. People

like you and I create the demand for low priced products that makes
WalMart, Home Depot, Sams Club mega-stores profitable. If the
collective we made a conscious decision to not support warehouse stores
and decided it would be for our longer term benefit to partonize
smaller local retailers then I guarantee you those box stores would
disappear. Of course we know it ain't gonna happen 'cause we are all
selfish in the short term.

>
> > If the term means something else, then please explain it to me.

Based upon the website in the below URL, I have been able to adjust the radio's tuning:
http://experts.about.com/q/Ham-Radio-2161/Grundig-Mini-World-100.htm

On the other hand, when closing the radio, I snapped off the red battery wire and the antenna wire! Is there a picture or schematic of the back of the inside of the radio available, so that I can figure out where to solder the battery wire? I'm pretty sure I know where the antenna goes... (Next time, I need to be more patient!)

I also lost the two screws under the battery compartment... :-(

Admittedly, when writing my previous post, the "realities of disabilities" were not foremost in mind. Whether or not most people "care" about such realities is another issue altogether...

In any case, it seems that some thought has been given to accomodating individuals with various disabilities:

Excellent resources here: http://www.handiham.org/index.php?menu=1

Below is an exerpt from http://www.ncvec.org

ACCOMMODATING AHANDICAPPED PERSONMany handicapped persons accept and benefit from thepersonal challenge of passing the examination in spite of theirhardships. For handicapped persons who have difficulty inproving that they can decipher messages sent in the Morsecode, the VEs make exceptionally accommodative arrange-ments. To assist such persons, the VEs will:• adjust the tone in frequency and volume to suit the examinee.• administer the examination at a place convenient and com-fortable to the examinee, even at bedside.• for a deaf person, they will send the dots and dashes to avibrating surface or flashing light.• write the examinee’s dictation.• where warranted, they will pause in sending the messageafter each sentence, each phrase, each word, or in extremecases they will pause the exam message character-by-character to allow the examinee additional time to absorb, tointerpret or even to speak out what was sent.• or they will even allow the examinee to send the message,rather than receive it.Should you have any questions, please contact your localvolunteer examiner team, or contact one of the 14 volunteerexaminer coordinator (VEC) organizations. For contact infor-mation for VECs, or to contact the FCC, call 888-225-5322(weekdays), or write to FCC, 1270 Fairfield Road, Gettysburg PA17325-7245. Fax 717-338-2696. Also see the FCC web at:<http//www.fcc.gov/wtb/amateur/>.

Below is from
http://www.handiham.org/wiki/index.php?title=Testing&redirect=no

Testing
>From HandihamWiki
Accomodative Testing

What the ARRL VEC says

Special Testing

Reprinted with permission from the ARRL VE Manual, 8th Edition Chapter 7

Editor’s note: Changes are expected in Part 97, the rules governing the Amateur Radio Service in the United States. Changes have already been undertaken in other countries around the world. For the most complete and latest information, see www.handiham.org.

A candidate who requires special testing procedures because of a physical disability must be accommodated (Section 97.509[h]). The rules stipulate that the VE team may require a Doctor’s Statement indicating the nature of any disability before determining which, if any, accommodations must be used.

If accommodations are permitted, the VE team should indicate this on the Test Session Report form. Including the names of non-VE’s who will read or copy the candidate’s answers is recommended. The Doctor’s Statement should be submitted to the VEC with the candidate’s test booklets and papers, which we’ll retain indefinitely in our session records.

Accommodations and Morse Code Exemptions

All accommodations are available for 5 WPM. VE’s are allowed great flexibility in accommodating handicapped or disabled candidates. Many current accommodative procedures, which were initially announced by the FCC on June 15, 1990, at the National VEC Conference in Gettysburg, Pennsylvania, were formalized through the adoption of PR Docket No. 90-356 on February 14, 1991, which is the Amendment of the Amateur Radio Service Rules to Make the Service More Accessible to Persons with Handicaps.

The accommodative procedures VE’s must make available to handicapped or disabled examinees may be used if the candidate has a visually identifiable handicap or if the candidate presents you with a Doctor’s Statement indicating the nature of the claimed handicap/disability, as provided for in Section 97.509 of the FCC Rules. The Doctor’s Statement may suggest ways in which the examinee may be accommodated to overcome the particular handicap.

Accommodations

Accommodative procedures must be used when a handicapped applicant requires them. The accommodations may include administering the

examination at a place and time convenient and comfortable to the examinee, even at bedside. Other procedures can include:

☐ Reading or writing for candidates who can't do so themselves. Even illiteracy is considered a reading handicap. Other reading handicaps can be experienced by those who are very young (and may not yet be old enough to read or understand certain words or sentence structure) or the elderly whose eyesight may be failing. Enlarging materials to two or three times their normal size will sometimes be effective. Writing handicaps may also affect the young or elderly.

☐ Varying the volume, audio frequency or speed (more on this to follow) of Morse code examination texts will often accommodate those with minimal hearing impairments. For those with more severe hearing impairments, flashing lights or a vibrating surface (tactile pad ===>>

http://www.handiham.org/pdf/tactile.pdf

<<===
, feeling the surface of a speaker, etc) are often used in lieu of hearing.

☐ Pausing the examination message, where warranted, may be a successful accommodative procedure to overcome candidates' ability to write or respond quickly. The pauses may be included after each sentence or phrase, after each word or even after each character, to allow the examinee the time to write, absorb and/or interpret what was sent. The decision as to the level of pausing warranted is determined by the VE team in conjunction with input from the candidate or the candidate's Doctor's Statement. The level of accommodation should be the least necessary to overcome the candidate's handicap.

☐ A sending test may be substituted for a receiving test for handicapped candidates where the examinee's particular handicap precludes a receiving test. In the case of the character-by-character examination, you may administer a standard five-minute QSO format with a 10-question fill-in-the-blank (this exam could take close to three times as long) or you may administer a character-receiving (or sending) examination that includes all the characters of the alphabet, all numbers -9, the period, comma, question mark, slant mark (/) and prosigns, and for a character-by-character examination, a grade of 70% or more correct characters can be considered passing.

If you require text to use in a sending test, let the ARRL VEC know. The applicant may use a key, keyer, or other similar device to send the required text. In most cases, the above flexibility will allow handicapped candidates to pass the Morse code examination on their own.

If the candidate doesn't have a readily identifiable handicap/disability or if the candidate doesn't provide a Doctor's Statement describing the handicap/disability he/she suffers from, you are not to offer the more flexible accommodations in administering the

Morse code examination. There's no difference in the paperwork or in the qualifications of any applicant who passes the Morse code examination using accommodative procedures. No special notations are required on any document.

It's entirely possible that even when using the most extreme accommodative procedures, a candidate may not be able to pass the Morse code examination. In having put forth the extra effort, there should be satisfaction in knowing that everyone tried their best.

Morse Code Exemptions

Effective April 15, 2000, the 13 and 20 WPM Morse code exam requirements were eliminated. There has never been a means to be exempted from the written exam or 5 WPM Morse exam requirements.

Procedures for Testing Candidates with Physical Disabilities

In addition to the accommodative procedures discussed above, the following information is provided by the Courage Handiham System to assist you in providing examinations to people with disabilities. The main thing to remember is to adapt the test procedure to the methods the candidate uses for normal day to day activity. The more independent the candidate can be in the testing process, the more valid the test results. Many people with disabilities have their own methods of dealing with day to day activities such as writing letters and checks. Asking the candidate how he or she normally deals with these activities will help you provide a more professional testing session. If you have a question about testing the physically disabled and if that question is not answered here, please call the ARRL/VEC. If we don't have the answer when you call, we'll discuss your question with the staff of the Courage Handiham System and get an answer as soon as possible.

Visually Impaired Candidates:

The major modification usually needed for testing blind and low-vision candidates is that the tests are given orally. Read the exam questions and multiple-choice selections to the candidate and then record the candidate's response on the answer sheet. Try to allow the candidate the same opportunity sighted people enjoy: process of elimination; reading the questions and remaining answers again; narrowing down the possibilities, skipping a question and returning later; and guessing. This will require a much longer time than most exams so plan accordingly. If you use someone other than a VE or trusted Ham to be the reader, be sure the reader is familiar with the correct pronunciation of amateur radio terms. The ARRL/VEC has a supply of written-element examinations written in Braille; check with the ARRL/VEC for availability. It is the experience of Handiham staff that it is more efficient and effective to read the test to an applicant, rather than to arrange for the Braille materials, unless there are special circumstances that require it.

When testing a visually impaired candidate for proficiency in Morse code, have him or her recite what's copied letter-by-letter, word-for-word or by stopping the tape at intervals. Some candidates may choose to type their copy using a computer or Brailling device. If a Brailling device is used the applicant must read the copy to the VE and the VE should retain a transcribed copy with the Braille sheet. A power Brailler is very noisy so hold the exam away from other candidates. A manual Brailler requires the user to punch each individual "bump" so character by character or word by word pausing may be necessary.

Cerebral Palsy:

Cerebral palsy is a disability with extreme variations ranging from quadriplegia (paralysis of all limbs) and no speech communication to a slight limp. Persons who are unable to speak or have a slowed speech often need to find other means by which to dictate information to the VE's. The use of devices, such as word boards, large cards with the individual multiple-choice letters printed on them so they can be pointed at by the candidate and a keyboard that can be activated by head wand or mouth stick are common alternatives to oral communication.

Multiple Sclerosis (MS):

Like cerebral palsy, multiple sclerosis has many variations depending on which part of the body is affected. The ability to read or write varies, depending on the extent of disability. Blurred or double vision is often present. The primary difficulty for most MS candidates is fatigue. Because of medication and fatigue, the time of the day when the person is most alert is the best time for him or her to be tested. For this reason, home testing or special arrangements are sometimes appropriate for people with MS.

Muscular Dystrophy:

People with muscular dystrophy experience muscle weakness and fatigue. They're generally able to read and write their own exams. Occasionally Morse code exams may need to be given orally, as is done for sight-impaired candidates, if the candidate isn't physically able to write fast enough. This isn't usually needed, however, unless the candidate has serious physical limitations. People with muscular dystrophy may find home testing or special arrangements by VE teams necessary, depending on the level of muscular weakness.

Arthritis:

Arthritis can make it difficult for people to sit in one position for long periods so VE's need to keep in mind that they need to allow breaks so that the candidate may stretch or move around. This should be done at a convenient time between exam elements. Candidates with arthritic discomfort may not be able to copy the code by hand on paper and may ask to take the exam orally.

Hearing Impairments:

These candidates won’t require special assistance in taking the written exams (unless also have a vision loss). Because hearing impairments can vary from absolute deafness to only a limited degree of tonal deafness, it may be difficult to administer the Morse code examination with candidates who have a hearing impairment. To administer the code examination to candidates with limited hearing impairment, vary the volume and/or tone frequency to those they can hear. If special-frequency tapes are needed (for any tone frequency other than 720-750 Hz [ARRL/VEC tapes are generated at 720 Hz]), the Team Liaison should request them--indicating the specified frequency--when registering the session. If amplification isn’t feasible, the use of a transducer (usually supplied by the candidate) that allows the candidate to feel the code is a possible alternative (a large woofer speaker with a lot of bass response has worked in the past). A flashing light, or a computerized equivalent, can be used if the applicant has practiced the technique.

Heart and Lung Conditions:

People with serious heart or lung conditions may find travel to exam sites too strenuous. Although they probably won’t have other special requirements, arranging to hold the exam session in the home is often necessary.

Spinal Cord Injuries:

People who have spinal cord injuries usually experience some degree of paralysis. For the candidate able to use his or her hands effectively enough to write, no modification is necessary, other than the site being accessible to wheelchair applicants. For a quadriplegic candidate (with no use of hands or feet) unable to write, it’s necessary for him or her to read the exam (it doesn’t need to be read to them) and let him or her dictate the answers. Likewise, the Morse code exam can be given orally or can be typed on a keyboard with the use of a head wand or mouth stick.

Stroke:

People who have suffered one or more strokes may require someone to write the test answers for them because they may suffer from partial paralysis. If aphasia (loss or impairment of the ability to use words) is a problem, VE’s may need to have the candidate say and physically point at the answer for a particular question. If their speech is impaired, the candidate may indicate the Morse code characters by pointing to letters on an alphabet board, to indicate that they understand the text.

Epilepsy:

Some epileptic seizure activity can be triggered through anxiety and nervousness. Therefore, keeping a relaxed and calm environment during the test session, without undue waiting to take the exams, is important. If candidates adjust their medication, through consultation with their physician, they can control anxiety and/or nervousness.

Testing epileptic candidates in their homes to keep down stress is sometimes necessary.

Each candidate’s situation is different and these are only general guidelines. This is not a total list and there are many other conditions that may call for adaptive testing. In all cases, keeping the test session as non-stressful as possible will result in the best performance by the candidate, and will make the examination process easier for everyone.

Bob Weinstock - Hammin' it Up!
http://pr.gallaudet.edu/otg/BackIssues.asp?ID=1737

When people who are radio enthusiasts and who know Bob Weinstock see his telltale red Toyota pickup truck with the license plate W3RQ, they wonder how a deaf person can possibly be an amateur radio operator. The fact is that Weinstock has been licensed since he was 13 years old, and holds the Extra class license, which allows him full access to all amateur frequencies and operating modes.

“I learned Morse Code in Boy Scouts, and my older brother got his ham license soon afterward, so naturally I followed in his footsteps,” said Weinstock.

Weinstock said that most of the earliest radio pioneers were amateur radio operators. Even today, hams are at the forefront of virtually every technological innovation, and are involved in many communication emergencies. When a tornado struck La Plata, Md., last spring, ham operators went on the air and provided a communication link for emergency personnel. They also provided communications during the September 11, 2001, terrorist attacks on the World Trade Center and the Pentagon, and during hurricanes, earthquakes, and other natural disasters when telephone and commercial communication channels are disrupted.

Amateur radio operators come from all walks of life. The late Barry Goldwater, a Republican senator from Arizona and 1964 presidential candidate, and the late King Hussein of Jordan were both hams. Other hams, still active today, include Walter Cronkite, retired CBS News anchor; Patty Loveless, country music singer; Joseph Taylor, a Princeton University professor who won the Nobel Prize in physics in 1993; and many of today’s NASA astronauts and mission specialists.

All U.S. amateur radio operators hold licenses issued by the Federal Communications Commission. They earn licenses by passing Morse Code tests and multiple-choice examinations in electronics theory and FCC laws and regulations. Currently, there are three classes of license: Technician, General, and Extra.

When Weinstock earned his Extra class license, he had to demonstrate his ability to copy Morse Code at 20 words per minute. “Morse code is actually quite easy for a deaf person; the dots and dashes are just like the pure tones in a hearing test,” he explained. He has won

several Morse Code competitions at amateur radio gatherings through the years. Although he is not currently “on the air,” he maintains his ability to copy Morse Code at high rates of speed. “I use a cable connected from my radio directly to my hearing aid, or put my hand on the receiver speaker to help me copy,” said Weinstock.

Amateur radio operators communicate in many ways, including Morse Code, voice, and digital modes such as radioteletype and packet radio. “Many people know that Robert Weitbrecht, a deaf physicist, invented the modem that made our vast TTY network possible,” said Weinstock. “What they may not know is that Dr. Weitbrecht was an avid ham. He came up with the idea while using amateur radioteletype, or RTTY.” Today, ham radio operators even bounce signals off the moon, design and launch satellites into space, and talk with astronauts on the space shuttle and international space station.

A systems trainer with Information Technology Services and part-time English instructor, Weinstock is a 1977 and 1983 graduate of Gallaudet, but a loyal member of the Class of ‘76. When he leaves campus each evening by the MSSD gate at Brentwood Parkway on his drive home to Takoma Park, he notes that Telegraph Hill Road is the site of the first telegraph line in America, between Washington, D.C., and Baltimore, Md.

There are over 500,000 amateur radio operators in the United States, and many more worldwide. In this country, many hams are members of the American Radio Relay League, the national association for amateur radio, headquartered in Newington, Conn., two miles from the American School for the Deaf in West Hartford. Weinstock served on the ARRL Board of Directors in the late 1980s.

For more information about amateur radio, go to the ARRL web site at http://www.arrl.org.

I'd imagine so. They would then most likely be eligible for the Tech Plus (Tech Plus passed the 5 WPM test) privileges which allow voice, CW and digital operation on 10 meters, and CW on the 80, 40, and 15 meter bands.

To get more privileges they'd have to pass the General Class element(s) of the exam.

Are you sure your soldering iron is big enough?

Look for a rail connected to the + end of an electroytic cap.

If you are really using the Faraday Cage as a EMI to ground conductor AKA Shield this is true. If you plan on using the same ground for any of your equipment say an audio amplifier or a Ham radio transmitter etc. you will have only created a very good antenna for your ground loop which will infect any equipment that is not properly designed with star grounds or uses multiple chassis common grounds. Of course if you have a faraday cage one would assume that you have that knowledge in the first place.

I have not built one of these cages before but if I did I would install a very deep ground rod with a very large conductor and use it as my earth ground for all of my equipment. For my cage I would install a second ground rod several tens of feet away from the earth ground but not as deep.

Without a Faraday Cage it is helpful to think of each peice of equipment having its own cage within it but completely surrounding all of the circuitry inside. This is of course called shielding but many people make the mistake of also running common and chassis ground for the circuits to the same as the shield multiple times which creates a ground loop inside the shield. In other words you don't have shield in that configuration. In audio applications, my area, that is EMI faux pa, groundhogging, re-animating the dead, fun for those who like goose chasing, grounds for the dismal,...

Anyway, just run all chassis points to one spot, use the extra wire, and then ground that single point to earth at the power input. If you have grounds tied to the actual metal chassis then float them and run wire to the single point.

It's not that impressive. Lots of radios. Crap stacked floor to ceiling. I lost the dog in here.

If I ever make sense of it, I'll take a few shots.

But I'll tell you now, that Maghakian's is far more impressive.

You would think that an ISP would automatically add you to their list of pre-approved senders if you are answering an e-mail from one of their own damn customers. But NOOOOOOOOooooooo!!! They bounced my reply to your e-mail. I did try resending it through another of my accounts that I believe you should already have approved.. if not, contact me through some other ISP and we'll get you an account that doesn't prescreen your replies for you (that's what the NSA is for!)

Oh? So that makes a difference whether a person is laid off on Monday,
next week or next month? What ever is your point? That it's OK if the
plant closes next week but not this Monday? Duh! Closed is closed [!]

And when they close a plant only union folks get laid off? Hate to break
the news to you Slick, but when the plants close, a lot of non-bargained
for workers and white collar, Republican managers will be pounding the
pavement too. Try and grow a brain--or at least take a broader view.

> You sound like a disgruntled union worker.

Bzzzzt! Wrong again, boggle boy. Last time I was in a union was in 1966 and 1967 at Channel 2 TV in Detroit and that was a condition of employment. (Side story: Marion Stoner, the Chief Engineer, W8VWY [now an SK] was quite apologetic about us kids having to join the union--the dues were your entire first week's salary. However, we didn't care. It was the pinnacle for a kid to be working in broadcasting at a major network TV station and the union and dues were a secondary consideration.)

When I went on to being Chief Engineer at a couple of stations later in my broadcasting career and my 33 years in telcom were all spent in management.

> I did talk with a UAW member on Monday and he felt that when the plants do close

Agreed... and hopefully only "some" get burned, not a lot--although the
housing "bubble" is *quite* large.

> The "savings rate" that is quoted so often is never explained in
> detail. Hopefully it is not as simplistic as I think it might be. Any

> ideas about it's computation....

Not specifically, but it seems to be widely quoted in the financial
journals and it doesn't seem to be too complicated of an algorithm
(which is to say it could be quite simplistic; i.e.; somehow get a
handle on the salaries paid vs. the amount set aside for savings. In any
event, from what I've read, being negative isn't a good thing and it
seems to be heading in the wrong direction).

> rightsizing, downsizing, outsourcing, globalizing that we've gone
> through over the past 2 decades the economy has absorbed those workers
> overall into other jobs.

Yes, but what "other jobs"? Technical and manufacturing and electronics
are virtually gone. Even low-tech stuff like brake pads and thousands of
other simple manufactured items have gone overseas. (even rare earth
magnets for our cruise missiles are made in China). I guess if we are
talking "service industry" jobs like making beds at the Holiday Inn or
asking if "You want fries with that?" are considered "other jobs", then
you're right.

We are still sailing along.

Maybe..for now...but there might be some truth in the old saying about
"a death from a thousand cuts". As stated previously, this may be
ultimately catching up with us. Just because it's a long time coming
doesn't mean it's not happening.

Furthermore, I would disagree with you that when major, major industries
that are deeply woven into the fabric of our nation are flirting with
bankruptcy, could reasonably be called "sailing along". Rather a bit of
a stretch IMHO.

If *we* (you and I) have that option, there is a lot of truth in what
you say. However you completely ignored my point that many people in our
society--those with a crappy job or NO job-- *don't* have that option.
They (the bed makers and fries people) *have* to buy cheap...and with
virtually everything being made overseas, the chances of opportunities
for a *good* job are seeming somewhat dimmer.

Did I say that you were currently a disgruntled union member, 'tard boy? I merely stated that you 'sounded' like a disgruntled union worker.

Please, try to pay attention, if only for the briefest of moments.

Boggling!

3475lsb 2321-2340utc sio343 om said his name was "Starsky" and that it was a "gay pirate chit chat" and to join in. Said he was a 'CB SAVAGE" and made many references to his gay lifestyle. Said he was lonely and only wanted to talk to other pirates. Did not hear a comeback or QSO with anyone else, but he went on and on about the passion he felt for it and why wouldn't anyone talk to him. Signed off saying he was "pissed at the other gay pirate" operators for not talking to him.

Turn $6 into $6000.00 in two weeks : HOW TO TURN SIX DOLLARS INTO SIX THOUSAND DOLLARS. READING THIS COULD CHANGE YOUR LIFE! IT DOES WORK! I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. Well GUESS WHAT!?... Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had: made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, WHY it works... Also, make sure you print a copy of this article NOW, so you can get the information off of it, as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage) It's truly worth your time!!! Take it from ME.... a TRUE skeptic...It works!!! I read this message over and over again trying to find a loophole...there isn't one! I just tried it for the sake of trying it! and Now I'm Glad I did!!! IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is 99%no risk - it really works! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the

mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the following on: each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now: get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal. Mail the 6 envelopes to the following addresses: #1) JOAN G. 71 STEVENS TRAIL HOPATCONG, NJ 07843 #2) JEN GERSTNER P.O. BOX 197 LEITER, WY 82837 #3) James Smith 316 N. 37 St. Nederland, TX 77627 #4) Alene Lopez 2103 Jacqueline Denton, Texas 76205 #5) Jody Rumple P.O. Box 2774 Salisbury, NC 28145 #6) Ahlam Shahin 4129 Mary Kay Cr. North Olmsted, OH 44070 STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list. STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! You won't get very much unless you post like crazy. This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1: You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory. Step 2: Open a blank 'notepad' file and place

your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3: Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4: Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5: Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is do you realize that thousands of people all over the world are joining the internet and reading these articles everyday? JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Trust me! This is REALLY UNBELIEVABLE! Remember, play FAIRLY and HONESTLY and this will really work.

Just a few thoughts to add to several comments made in this thread:

Fact: Price inflation has exceed income increases in the last few years.

It is true that outsourcing and the exporting of jobs have been occurring
for some time.
What is never stated is how and with whom.

Were American corporations allowed to outsource to the Soviet Union? NO!
What has changed? The election of a treasonous President by the name of
Clintoon.

Thanks to Impeached Clintoon and his granting of MFN trade status to
Communist China, and a host of other UN-fair trade agreements, this
"gutting" of American middle class is indeed accelerating.

Just a few items for you to ponder in regard to UN-fair trade.

ANY foreign company wishing to establish a business in China must partner
with a Chinese owned business (Communist Party owned) and foreign ownership
can not exceed 49%!

How many Chinese restaurants in San Francisco or New York's China-town are
51% owned by Americans?
Please, let us not even discuss the ability to become a US Citizen compared
to migrating to China and becoming a Chinese citizen. UH, so sorri, you
wong color.

Chinese companies (Mostly owned by the Communist Government) routinely dump,
sell products below cost for export.
This is a well known illegal trade practice. Mostly ignored by our
Gooberment these days.

Today, Communist China adds 25% tax on any US made vehicle sold in China.
A GM Hummer was taxed 50% in China just a few short years ago. This is
first hand knowledge.

Guess how much our Goobermint agreed to tax the new Chinese cars expected on
these shores in less than two years.
Hint: It is in the middle single digits! Makes you want to barf.

Guess how many cars were imported from S. Korea.
Compare that figure to the number of American made cars imported into
S.Korea.
The answer is almost insignificant, in the low single thousands.

Japan Automobile companies have about a dozen factories in the US. There
are ZERO American automobile factories in Japan because the Japanese

government won't allow it. Ditto S.Korea.

Guess how many TV channels owned by the Chinese Communist Party are broadcast into American homes on DishNetwork and DirectTV? There are about a dozen on each! And they are packed with propaganda for Chinese Americans to digest 24 hours a day.

Guess how many American TV channels are available to Chinese people in China - Z.E.R.O.!
Need I mention Google and internet censoring and filtering? Books and movies are also censored if they can get past the Communist media regulators.

BTW: The Chinese Communist Party, via their Consulates and Embassy, maintains a close relationship and keeps an eye on Chinese students on American University campuses. Many, if not most, Chinese associations on Campus are organized by the Chinese Consulate or Embassy. I have first hand knowledge of this.

Need I go on to point out the ignorance, or more likely complicity with Korporations, of our Goobermint?

If you don't act and make noise to your Gooberment representatives Big Korporations in complicit partnership with Chinese Communist Korporations will steam roll right over you. Just remember to place your meager savings in their stocks in your IRA.

A sync detector will make no difference when listening to a local
flame-thrower because it is not needed in that situation.

Try to listen to a barely perceptible flea power station and then turn on
the sync detector. That's what its for!
It is for DXing not flame-thrower program listening! Don't confuse the two.

I have been on Earthlink for a couple of months now and noticed that it is generally decent except for the fact that sometimes their signing off process is slow and locks things up. I find that companies of all kinds generally make it harder on their customers than it really should be. Especially when it comes to doing basic tasks.

Maybe he is a spook himself trying to see which dumbass gets on those frequencies and when you do you are toast. You just never know. I've never heard of anyone using 3480 and thing of that sort for communications. Especially when the area between 6920 to 6960 has been a long time area to hear pirate broadcasts.

What is your definition of outsourcing.

Many corporations do have businesses and investments in the USSR, but
the highly unstable business and political situation makes it
difficuly=t to set up long term relationships. China has a far more
inviting and accomodating climate for overseas investment. Not to say
that bribery doesn't take place, but at least you are not taking your
life in your hands by opening shop.

>

Yeah, and the US puts a 100% tariff on Japanese electronics (or did so up at least until the 90's, I haven't kept up)

AFAIK it is still in effect for Japanese motorcycles as well.

> Guess how much our Goobermint agreed to tax the new Chinese cars expected

S. Korea also charges a 100% excise tax for each car sold in Korea (even the ones made here). And as far as US imports to any other country, I'm sure they would do more so if the people in those countries could afford US cars. As a rule, US cars cost over twice, and up to 4x more than a locally produced car. There's a good amount of US made products available here, BTW. No electronics to speak of, though... we don't make any anymore. Lot of food stuffs, paper products, white goods, etc.

> or even eliminated the effectiveness of this antenna. How is reception on
> the AM band (525-1615)?

Shielding is a recommended mod to reduce interference from VDT's and other nearby equipment. The LW/MW ferrite rod is sensitive mainly to the magnetic field so shielding that is effective on the electric field and is not ferro-magnetic has little effect on the LW/MW sensitivity but is effective at SW. If you want the best results on LW/MW, it is advisable to replace the ferrite rod antenna with shielded or toroidal transformers, shield the receiver for both electric and magnetic fields, and use a directional outdoor antenna with shielded transmission line. Leaving the internal antenna in place degrades the directivity of the outside antenna and picks up more local interference. This would be true for any radio with a built-in antenna, not just the DX-394.

Tom

You might try and find a user manual for the old Heathkit GC-1000 Most
Accurate Clock.
It synchonizes the clock and local oscillator to the WWV transmissions
at 5, 10 or 15 MHz. The kit came with a preassembled and prealigned RF
board but you still had to assemble the data recovery and other parts of
the unit. The manual includes full schematics (including RF board) and
a good theory of operation section. The only thing missing are
instructions on aligning the RF board. The silly thing works pretty but
I had to build an antenna and install it in by attic to get it to
sychronize reliably.

Source record: 59839

Ok, I have a bunch of stupid questions. I have an old Unelco short-wave radio from when I was a kid. My son now wants to play with it... Does anyone have a manual for one of these old things? Or at least know how to set it up and use it that can give me some pointers? It doesn't have an antenna any longer but I'm sure I can use some wire right? If so, how long should it be and what type of wire? Will any 2 wire pair work? It also has the number 5 coils (9.4 - 17.8 mHz) in it. I don't have the others but I remember it working pretty good with them.

Sorry for the stupid questions but any help would be appreciated.

Thanks, Jon.

It will build an electrostatic charge up for one thing.

Grounded chassis are for draining away potential ESD threats as well
as for EMI RFI suppression.

In the case of a miles long sheathed cable run, yes, it should be
tied to ground often to keep it drained, and to protect from and drain
lightning strikes.

I have a loop antenna around here somewhere that I bought at a Wal Mart store years ago.I dont remember the brand name of it,I think it is a Philips brand name.I haven't even used it yet on any of my radios.I am not sure if even I can find it now,as much junk as I have stacked up on top of junk on top of more junk.Sometimes,I get to looking around and forget most of the junk I have here.(Oh,I didn't know I have that!)

> frequencies, and best listening times? I am located in eastern Canada.

Look for stations in these two bands one hour before to several hours
after your local sunset for the strongest signals you are likely to
encounter.

31 meter band 9400 to 9900
49 meter band 5900 to 6200

You should find many stations in both bands during that time.

Looks like a pretty basic radio with two terminals on the back GND and
ANT.

Connect the GND to a ground rod. You can use a cold water pipe for
ground if it is metal going into the earth.

String up a horizontal wire 50 to 200 feet long and continue one end
down vertically to the radio ANT terminal.

Ok, we hooked up a single insulated 20-25 foot wire to the ANT lead and hung it above the back sliding door in our kitchen. We didn't hook up any ground wire though. Turned it on after cleaning the battery contacts and all we get is static across all the bands. There's a trimmer control on the front of the radio but I have no idea where to set it (all the way to the left? middle? right?).

Thanks, Jon.

Try a longer wire away from the house and connect a wire from the GND
terminal to a ground rod.

3257. R7 display has died

Newsgroup: rec.radio.shortwave
Date: 2006-01-27 06:16:35 UTC
From: Pete KE9OA <p.gianako@comcast.net>
Message-ID: <br-dnUbss89cJ0TeRVn-tg@comcast.com>
Source record: 59857

I picked up a Drake R7 this week. I upgraded the 1st mixer to an SRA-3MH and changed the diodes in the 2nd mixer and the translater mixer to matched 1N5711 hot carrier diodes (I don't know why they used 1N4148s in the first place).
Anyway, this is where the story gets sadder. When I replaced the DR7 control board the LED display worked for about 20 minutes, and then it died. I can still toggle up and down through the 500kHz steps so the synthesizer is still working but I am not sure what controls the display. +5V seems to be present at the different chips. I don't know if that display driver chip took a dive.
Has anybody else had this type of problem?

Pete

Another problem is that you replaced a 500 mW diode with a 250 mW diode
so have you checked to see if they are still good? Maybe they shorted
and took out a bias supply that is also used for other things like a
logic signal control voltage.

That is all true, but in fact the main reason that it is done is
noise reduction in the cable pairs by inducing an opposing current
from the sheath into the pairs.

Hello:

Can anyone offer an opinion on how well a good quality name brand coax will "typically" last if buried ?

Not the types called "buriable", just the regular stuff.

Will probably run in a pvc conduit, but was wondering about if I didn't.

Thanks,
Bob

I have a TR7 that has intermitent display, and I believe its just bad
contact on the plug in boards. Not sure if r7 is buit same way, but might be
worth a try re seating boards.

I don't care about 14.005, but I'd love to hear it on 7.050 from the
U.S. With the sunpots on vacation, I almost never hear anyone from the
U.S. 20 meters is never open except for a few minutes each day, and 7.1 up
are filled with S meter pining broadcasts.

73,

Geoff.

Nothing so formal as that -

I take it on camping trips and vacations, and I'll often use it close to home when I'm going to be imaging with my telescope.

The shielding has eliminated the possibility of connecting the top-mounted, screw-in type antenna, so I have to wire up an external antenna; I have a wiring company coming in to do so in a couple weeks. Don't know how it performs yet due to no antenna, but at least it powers up!

Source record: 59890

The title of the thread unintentionally leaves the wrong impression.
When I read "Unelco Model 1914 Radio," my first thought was that the
radio was from 1914. Actually, it's the model 1914 Unelco radio. I went
to rec.antiques.radio+phono,where I learned that the radio is a
transistor radio that dates from about 1970.

Like you, my first thought was not to plug the thing in and fire (ha,
ha) it up right away. See:

http://groups.google.com/group/rec.antiques.radio+phono/search?group=rec.antiques.radio%2B
phono&q=unelco&qt_g=1&searchnow=Search+this+group

or
http://tinyurl.com/7b28v

The first hit leads right back to RRS, but it is some seven and a half
years old.

Unelco is, in my guess, the Baltimore-based importer of these radios.
In 1970, this radio was surely made in Japan. I have a few such
Japanese multiband radios. They may not be performance champs, but I
find them a lot of fun to listen to. I have a fondness for analog
tuning. I am further certain that the schematic can be found in a Sams
Photofact. The Sams website has a search function. I'll bet the crowd
at rec.antiques.radio+phono could be helpful.

Best wishes.

Hi Alan in Darwin.. do you know any thing about this ?

That 300Kw looks nice but has anyone heard it"

"Christian Vision has acquired the former Radio Australia facility at
Cox Peninsula near Darwin, Australia," Flynn says. "This facility
includes a Thomson 2320 (300kW), two Thomson 2326 (250kW) and three
Collins 821A (250kW). By way of antennas there are 7 TCI 611 slewable
curtains pointing in an arc across Asia, giving superb coverage to that

region. Christian Voice Australia provides English services to targets
in Asia, with services in Hindi and Mandarin to follow."

Thought it was estimated at about half that, but they don't publish
audited statistics, so it's anybody's guess.

BTW, I didn't realize that think tanks were typically broad membership
societies.....

Thanks guys.....I am going to fool around with it a little bit more this afternoon. I do have a soft copy of the service manual, so I will study it.
About those diodes I replaced, they are used in the mixers and they are run in switch mode from the LO signal, so there is no power supply providing bias to these components.
It was worthwhile to make these improvements.....with a short antenna, there is no difference in signal to noise whether you have the preamp switched on or not.

How old is that news? They've been using that site since at least 2001 or so, and since that time has been renamed Voice International (and now CVC International?).

>(feh !)

Isn't this old news?

Back in 1997 the little Grey Man (Prime Minister John Howard) kicked the stuffing out of the ABC by slashing its budgets (dropping the French service and any tranmissions not targeted at Asia/Pacific) and leasing the newly refurbished Darwin site to his Christian buddies at a sweetheart lease rate. (I think that you could be prosecuted for corruption for that sort of deal in the US). Howard made some remarks to the effect that the government didn't need to be in the news business and that people overseas could just watch CNN. Didn't work out well and was a bit of a foreign policy stumble, and after cutting back their schedule, they went back and increased their transmit schedule by hiring the Darwin transmitters a year or two later.

There is another shortwave site that another outfit just built down there in the last year or so, but I don't remember the details. I think it's connected to HCJB.

Davis RF sells a coax they claim can be buried. I'd consider using both
a cable rated for burial and put it in PVC pipe. In small diameters,
that white PVC pipe is nearly free.

http://www.davisrf.com/

I'd have to dig up the book, but the wireman has tips on buried coax.

Hello everone
I am sorry to ask a question such as this, but I am totally lost on what radio to buy.
I am new to SW, but want a radio that will enable me to listen to the usual broadcast bands on SW as well as ssb transmissions for ham and utility stations.
which of the many available would you people recommend please
thanks
Rikk
PS, at the moment I have a tecsun pl230.

3313. Lightning Arrester Location ?

Hello:

Would like to get your opinions on this:

Will be putting up an Inverted-L receiving only antenna, like the PAR EF-SWL in a few weeks.
The end point of the downward vertical leg will have a Balun, which I plan on grounding to
a 6 foot or so 3/4 inch Cu water pipe driven into the ground at that point.

From there, I will have about a 25 foot run of coax (buried about 6 inches deep) back to the house.

If I put the lightning arrester next to the Balun, and use the same ground rod, will that be acceptable, or should it
really be placed right where the coax starts to enter the house ?

Would like to avoid having to drive another ground rod in, and also having another break in the coax.

I realize that right next to the house is probably better practice for the arrester location, but do you think it would really
matter for any induced high volt emf pulse that the antenna might be subjected to (as the coax run will be buried) ?

B.

On the off chance this might be a serious question, if you took the Brokeback Mountain movie and substituted two heterosexual lovers for the two homosexual lovers then what would you have?

In my opinion you would have a rather dull love story with a thin plot and some nice outdoor shots of the countryside.

Why do you have such an unusual interest in this dopey movie anyway...maybe some tendencies you are not willing to talk about in public eh?

> Nor does it follow.

Bullshit. ALL ESD protection is drained to earth ground at some
point. Faraday cages have more functions that the ONE you seem to
think it ONLY has. It has several functions.
>
> (You should have seen Flash, the god of flashlights ...)
> "The voltage will float off to who knows where."
>
>> Grounded chassis are for draining away potential ESD threats as well
>>as for EMI RFI suppression.
>
> Things can be "grounded" but suppress nothing much.

Bullshit. "Things" can be grounded, but a full "cage" which is
grounded diverts electrostatic buildups to ground, so there is none.

ANY electrostatic accumulation is typically referenced to ground,
and can be balanced to "zero" via grounding. Earth IS the reference.
Any conductor whether it be a wire or even a sphere cannot hold an
electrostatic charge if it is in contact with ground. It has to be
supported free from contact to build a charge. Said charges are the
bane of modern circuitry. Earth ground is and has always been the
reference. Static charged build on insulator surfaces, but can also
build on conductors that are isolated from a drain.

>> In the case of a miles long sheathed cable run, yes, it should be
>>tied to ground often to keep it drained, and to protect from and drain
>>lightning strikes.
>
> Lightning strikes & EMP pulses (perhaps worse) are another matter.

They are YET one more function of the reasons for caging a circuit.
Lightning SHOULD hit a pole, and travel down the grounding wires on
each pole, but it can and does hit the cable bundles themselves as
well. Hell, and ungrounded bucket truck can build a HUGE ES charge if
it isn't grounded. If you are not familiar with this effect, you
shouldn't be in this discussion.

In this case, twisted pair bundles cancel some noise but not ALL
noise. So they get shielded. The sheathed cable runs are for yet one
more small protection against noise injection, and also stop inductive
taps from being feasible.

While I've not used the Degen model that John S. recommends here, it seems to be the consensus here that it's the best under $100 portable, and that it pretty much stands its own across the board among compact portables.

I'd personally go with the Sony ICF-SW7600GR as far as compact portables go. The sync detector feature can really make a difference in certain listening conditions (adjacent channel interference, fading).

If you wanna go all out, the E1 is a very nice fully featured portable, but it's larger in size (and in price!).

junius

Oh well, they'll all have their HF privileges then.

The K7RA Solar Update

SEATTLE, WA, Jan 27, 2006--The average daily sunspot number this week rose nearly 25 points to 49.4, about double last week's count of 24.6. Average daily solar flux rose by nearly 11 points to 91.4.

This week Double Sunspot 848 continued to expand as it transited the earth-facing side of our nearest star. But as of today, Friday January 27, it is moving out of the sun's visible area. At mid-week the interplanetary magnetic field moved south, and a moderate solar wind drove the planetary A index to 29 on January 26.

By this time next year solar activity will probably be even lower than it is now, with no visible sunspots for many days in succession. To get an idea of what this will be like, take a look at our propagation bulletins from almost 10 years, in September 1996. Archives are on this Web site (click on propagation bulletins for 1996). In the bulletins between 39 and 43 you'll see weeks of zero sunspot reports. These periods of low activity are not good news for those who enjoy the higher HF bands, but they can be great for 80 and 160 meters.

Bill Gallier, W4WX, writes that he and K4QD plan to travel to Ascension (ZD8) February 21-28.
He wanted a propagation prediction for 160 meters for those days to various continents. Here's
the rub: The popular propagation prediction software is written around an algorithm that only
works down to 3 MHz and not that reliably on the lower frequencies above 3 MHz. About the
best we could do was to recommend trying paths to various locations when it's dark at both
ends of the path. A propagation program like W6ELprop will work for this, because the
prediction lists of sunrise and sunset times at both locations. By the way, W6ELprop is free!

John Winans, WA2LGE, asks about lists of beacons. A Google search turned up a list that was
new to me, on the AC6V Web site. It's a nice set of links to beacon software as well as lists of
beacons from VLF to VHF.

For this week look for a planetary A index of around 12 for today, January 27, and then 5 (very

quiet) on every day through February 2. Geophysical Institute Prague predicts unsettled activity
for January 27, quiet to unsettled for January 28 and February 1 and 2, and quiet conditions for
January 29 to 31. Sunspot activity will remain low, and the 10.7 cm solar flux is predicted around
85 for January 27-28 and 80 from January 29 through February 2.

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for January 19 through 25 were 48, 33, 28, 60, 73, 62 and 42, with a mean of
49.4. The 10.7 cm flux was 88.6, 90.7, 93.8, 92.8, 92.4, 92.6, and 89, with a mean of 91.4.
Estimated planetary A indices were 7, 6, 4, 6, 15, 7 and 7, with a mean of 7.4. Estimated
mid-latitude A indices were 5, 4, 4, 4, 13, 6 and 8, with a mean of 6.3.

Go with the Sony 7600GR! It's a LOT of radio for the money! They were selling for around $130 US.

I agree with the other posters. Sony's 7600GR is the way to go in this category.

There are cheaper radios, but they're unlikely to rival the 7600GR in performance.

There are better performing portables, but they're also very expensive. I personally don't think I'll ever spend more than $200 on a portable receiver again.

Funny how no one ever complained about the Drake not having a ferrit MW antenna.

Reviews show that the whip antenna works quite well on AM (MW) unless there is too much interference that you can null with a directional antenna. The advantage of using a whip is that you don't have to turn the radio for your local MW stations, which can be a big plus for some. As far as the price -- the same as the Grundig Satellit 500 and 700, yet has many more features. Pay a cheap price and get a cheap radio. As far as the E1 being way over priced -- find another NEW radio with its features for a lower price. You can't. The E1 has some features that some expensive table tops don't have. I hope to get an E1 when Universal Radio starts selling factory refurbs. Funny how Sony 2010 refurbs never showed up. Yet when it came out, it was one of the most problem radios you could buy. I had one and got rid of it quick. The ones sent back to the factory probably were sold again as new.

I think you have a good idea going. Grounding at the bottom of that vertical element is a logical place in my mind. IF you ground it at the entrance of your home, that ground should also be bonded to the ground next to your balun. That way, they are both doing the same job, and have the same resistance to ground. You don't want one ground working better than the other!

It goes without saying that you have your antenna disconnected from the radio's when not in use - right!? I mean, all this grounding stuff we do is to help protect our gear when we have a senior moment while walking out of the radio room for the evening.

Bob.

Get the latest book called WIREBOOK IV from Press Jones, N8UG. It's not too big, is easy to read, and has MANY of your answers inside. One chapter deals with the proper way to use buried coax. That's the main reason I first bought the book. I have no interest with him, but think his book is excellent! Here's their contact information:

She's on Activist Duty Now

Mary Ann Wright quit a 30-year Army and diplomatic career in protest of the
Iraq war. She's now a soldier for the antiwar movement.

By Elizabeth Mehren
LA Times

January 20, 2006

KEENE, N.H. - In a dingy meeting room with walls the color of day-old
oatmeal, 40 people in plastic chairs formed a ragged circle. Sharing first
names, they went around the room: teachers, students, nurses and at least
three active-duty service members. They had come to hear about military
buildups around the world, but what they really wanted to do was hash out
their feelings about the Iraq war.

Fred wanted to know what to tell his 10th-grade grandson, who already worried
that he would be sent to Iraq. Catherine questioned whether the high school
students she counseled should believe the promises they heard from military
recruiters. Army veteran Tom asked if conditions for the troops were as bad
as he had heard.

Finally, the circle ended with Ann. With her smiling sincerity and sleek
hairdo, she looked like she belonged on the suburban charity circuit. Not
hardly: As an Army colonel and diplomat, Mary Ann Wright served her country
for more than 30 years in some of the most isolated and dangerous parts of
the world ? then quit because she felt she could not defend this war.

"I resigned when the Iraq war began in March 2003 because I felt the policies
of this administration were making the world more dangerous," Wright said.
"I
felt it was an illegal war and I could not be a part of it."

For more than two years, this unlikely activist has carried her message to small audiences, arguing that the war has increased animosity toward the United States. Wright is part of a tiny network of individuals who crisscross the country to speak out against the Iraq war.

Ron Kovic, a disabled Vietnam veteran from Redondo Beach, pulls out his bullhorn at rallies in Los Angeles, San Francisco and Washington. Michael Berg, whose civilian contractor son Nicholas Berg was beheaded in Baghdad in 2004, said he was so "obsessed" with ending the war that he once gave the same speech 16 times in seven days.

These independent antiwar speakers often appear on platforms arranged by peace groups. Like Wright - a member of Diplomats and Military Commanders for Change and Veterans for Peace - some belong to organizations. But as they address rallies, student groups and whoever else invites them, they represent only themselves. They pay their own expenses and do not accept speakers' fees.

"That would be obscene," said former California state Sen. Tom Hayden, a freelance antiwar speaker.

Wright, 59, brings a distinctive perspective. "I come at this as a foreign service professional," she said. "This is not a political rant. This is a well-reasoned argument of why I thought it was necessary to resign."

Even those who dislike her views do not dispute her right to contest U.S. policy. Lt. Col. Ellen Krenke, a Pentagon spokeswoman, noted that Wright was now a private citizen. "The 1st Amendment, that's what we're fighting for," Krenke said. "She is basing her views on what she has experienced ? and she has obviously had a wide and expansive career."

James Jay Carafano, a national security analyst at the Heritage Foundation in Washington, said he didn't think Wright had special credibility because she spent time in uniform. But, he said, "This is how democracies wage war. In

every war, you are going to find people who don't like it."

Operating out of the limelight, activists such as Wright are influencing public opinion about the war, said Bill Dobbs, communications director of United for Peace and Justice, an antiwar coalition in New York. "Their impact is subtle, but they must get serious credit," he said.

No one was more surprised than Wright to find herself among war opponents. She had been part of the system since she was 20, after she heard an Army recruiter's pep talk at the University of Arkansas. Wright was one of two daughters of a Bentonville, Ark., banker who gave Sam Walton a loan that helped launch his Wal-Mart empire.

Her career options in the 1960s were largely limited to being a teacher, nurse or homemaker, but Wright wanted something different. Mostly, she wanted out of Arkansas. "The recruiter made it sound glamorous: 'Join the Army, see the world,' " she said. "So that is what I did."

She saw the Army as an escape, not a career path. But the structure of the military suited her. Starting with her first posting at San Francisco's Presidio during the Vietnam War - followed by a stint at a NATO station in the Netherlands - Wright loved being in the Army.

She served 13 years on active duty, broken up over several tours, and 16 years in the Reserves. She never saw combat, though she was stationed in Grenada, Somalia, Nicaragua and Panama. She earned two master's degrees and a law degree while in the Army. In the early 1980s, she began trying to open up new military assignments for women.

Retired Brig. Gen. Pat Foote said she expected to see maybe a dozen women in uniform when she attended one of the "women in the military" meetings Wright organized at Ft. Bragg, N.C. Instead, she said, "I was amazed; there were over 200 women in the room."

Foote said she was neither surprised nor troubled by Wright's transformation.

"If you want a point of departure on Ann, it is that she is one of the most ethical and principled human beings I have ever met," Foote said. "When she went into government service, she did it as a public servant. She did it because she felt it was the right thing to do to help her country. She is a patriot."

When she requested an embassy posting in 1987, Wright was told that the Army's defense attache program was not open to women. Her response was to leave the Army -giving up a likely promotion to general - to switch to the foreign service.

She rose swiftly, landing assignments in Uzbekistan, Kyrgyzstan and Micronesia, and earning a heroism award for evacuating U.S. citizens during a coup in Sierra Leone. In 2001, she was part of the first team of diplomats to reopen the U.S. Embassy in Kabul, Afghanistan.

"As a diplomat, Ann had an absolutely phenomenal career," said F. Allen "Tex" Harris, a retired senior foreign service officer who worked with Wright. "She had abilities, background and luck. The luck is that she served in several posts where things went crazy, and she was given an opportunity to show her capability."

Wright was second in command at the U.S. Embassy in Mongolia when she heard that large numbers of U.S. troops were being sent to the Middle East. Before long, she and other diplomats began receiving cables from Washington, threatening to cut off development funds for the countries where they were posted "if our country was not part of the coalition of the willing," Wright said.

In 2003, Wright awoke at 3 each morning in Mongolia to watch BBC news on her satellite TV. "In the pit of my stomach, I became convinced that there was no way in the world that going to war in an oil-rich country in the Middle

East
was going to make the world safer," she said.

Writing her three-page resignation letter to then-Secretary of State
Colin
L.
Powell made her so stressed that medics thought she was having a heart
attack.

"This is the only time in my many years serving America that I have felt
I
cannot represent the policies of an administration of the United
States,"
she
wrote.

She was one of three top diplomats to quit on grounds that the war was a
foreign policy debacle, halting what Harris called "an odds-on"
candidacy to
head an embassy.

While serving in such places as Honduras, Panama and Grenada, Wright
said,
she justified her sometimes questionable work - in support of
Nicaragua's
Contra rebels, for example - on grounds that it provided humanitarian
aid.

"But when you really look at the long arm of it, I should have resigned
earlier," she said.

Wright left with no plan for the future. She owned an apartment in
Hawaii,
and thought she might retreat there to watch the whales. When a
Washington
think tank asked her to be on a panel about "risky diplomacy" weeks
after
her
resignation, Wright surprised herself by coming out with a fully formed
thesis about the strategic shortcomings of the Iraq war. Soon she was
fielding invitations to talk about U.S. foreign policy.

She traveled all over the U.S. - even to Europe - enjoying the fact that
her
government pension was financing her antiwar activities. She became a
perpetual houseguest, sleeping on pull-out couches in remote outposts
such
as
this western New Hampshire college town.

She began to have fun. In Dover, Del., the young Republican club at
Wesley
College denounced her as a "Bush basher" who had no place at the small

Methodist school. (She spoke there anyway, and about 100 people turned out in a room where 50 chairs had been set out.)

In August, Wright spent 26 days outside President Bush's ranch in Crawford, Texas, protesting alongside Cindy Sheehan, who lost her son in the war and who vowed not to leave Crawford until Bush met with her. There, Wright became known as the commandant of "Camp Casey," the protest encampment named after Army Spc. Casey Sheehan.

At Keene State College here, Wright began by describing her Army career, but quickly turned her focus to the Iraq war. She talked about U.S. soldiers whom she said lacked adequate equipment, who operated out of "four huge military bases that have been constructed like little Americas, in a country that does not have enough sewage or electricity for its own people." She discussed what she called excessive involvement by civilian contractors, along with the prospect that U.S. soldiers will return from Iraq with mental and emotional problems.

Offering advice on protest techniques, she said: "I am a brand-new person to this. But it sure seems to me that the physical acts get a lot of attention."

Wright spoke with pride about being ejected from a Senate hearing last fall after excoriating the witness, Secretary of State Condoleezza Rice: "You, the Senate, were bamboozled by the administration on Iraq and you cannot be bamboozled again! Stop this woman from killing!"

Within seconds a guard was escorting her out of the room. Wright slipped her arm through his elbow and walked out as if he were her date.

She has heard nothing from Washington officials: "They just ignore me."

But Tom Stockton, 35, paid careful attention as Wright addressed the gathering here that was part of a larger conference on globalization. Stockton, an education student, spent nine years in the Army.

"The protesting part kind of bothers me," he said. "But the message she
is
portraying is a good message. She is talking about the impossible
situation
our military is in trying to fight this war. Usually, the issues of the
soldiers are not being addressed, so it is good to hear from an insider
-
who
is now an outsider."

Keene State education professor Susan Theberge said the audience left
inspired because of Wright's ability to connect with her listeners.

"She was on the inside, and so she really understands what's going on.
And
yet she gave up all that power and privilege," Theberge said. "To me,
that
is
the definition of what an active conscience is. And that is her real
draw."

After decades of government service, Wright, in turn, has found a new
community. The Army officer and diplomat is at home among Americans who
are
anguishing about this war. "We are on the same sheet of music," she
said,
adding that she would continue to make her voice heard, as long as the
war
goes on.

3339. Coax Connector Questions

Newsgroup: rec.radio.shortwave
Date: 2006-01-27 21:15:19 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <3-CdndYhVJT9EEfenZ2dnUVZ_sKdnZ2d@comcast.com>
Source record: 59986

Hello:

This will be my first outdoor receiving antenna project.

For running coax between a receive only antenna (<30 MHz), and the receiver in the house,
what are the typical connectors to specify.

Some of these connectors will be outdoors, of course, and this is a consideration as they will
be essentially inaccessible, and I would like them to remain tight, functional, etc. for a long time..

I guess for <30 MHz, I don't need the higher freq. fancy N or F, etc., but should I
go with BNC's, PL-259/259, or...? Why ?

How does one protect outdoor coax connectors ?
Gunk them up with RTV or...?

Are therer "better quality" ones avail. than what one sees in the Universl cat., such as Silver plated, etc. ?
Worth getting ?

Thanks,
Bob

Are you matching a wire to a cable. You'll need a ''balun''.

I'd get one of the F-Connector types here:

http://www.geocities.com/qrp_baluns/lm.html

as the Cable TV stuff (RG-6, connectors, grounding blocks, etc.) is
ubiquitous and cheap.

OK, I'll admit it.
I don't know what people are talking about when they say the E1 doesn't have an AM antenna.
Doesn't it have a whip antenna.
What more could you want?
What the heck is a "ferrite rod antenna" anyway?
And what does it do differently than the whip?
Thanks all.

Coming in mid-February:
Personal audio recordings made of and by Saddam Hussein which will be the lowest day in the life of Hans Blix.

Iraq's WMD Secreted in Syria

The man who served as the no. 2 official in Saddam Hussein's air force says Iraq moved weapons of mass destruction into Syria before the war by loading the weapons into civilian aircraft in which the passenger seats were removed.

The Iraqi general, Georges Sada, makes the charges in a new book, "Saddam's Secrets," released this week.

"There are weapons of mass destruction gone out from Iraq to Syria, and they must be found and returned to safe hands," Mr. Sada said. "I am confident they were taken over."

His book contains a foreword by a retired U.S. Air Force colonel, David Eberly, who was a prisoner of war in Iraq during the first Gulf War and who vouches for Mr. Sada, who once held him captive, as "an honest and honorable man."

In his visit to the Sun yesterday, Mr. Sada was accompanied by Terry Law, the president of a Tulsa, Oklahoma based Christian humanitarian organization called World Compassion. Mr. Law said he has known Mr. Sada since 2002, lived in his house in Iraq and had Mr. Sada as a guest in his home in America. "Do I believe this man? Yes," Mr. Law said. "It's been solid down the line and everything checked out."

Mr. Sada is an unusual figure for an Iraqi general as he is a Christian and was not a member of the Baath Party. He now directs the Iraq operations of the Christian humanitarian organization, World Compassion.

Syria is one of only eight countries that has not signed the Chemical Weapons Convention, a treaty that obligates nations not to stockpile or use chemical weapons.

Most Wanted Terrorist Meets With Iran's President in Syria
http://www.nysun.com/pf.php?id=26427

Tehran Bust Drivers To Strike & Protest On Saturday

The upcoming Saturday's move is expected to put more pressure on the Islamic republic regime, at a time that it's facing more international pressure. The strike, if supported by the free world, might lead to the apparition of a worker movement, such as, the 1980's Solidarnosc (meaning Solidarity and which was the independent Polish Shipyards' Workers Union formed in Gdansk and lead by Lech Walesa) which was able to rally other cities drivers and various economic sectors behind it and to create the possibility of radical political changes.

Most National-Secularist groups, such as, the SMCCDI and the INSP (Iran's National-Secular Party) are supportive of the strikers and in general of any clean and clear move for a genuine democratic and secularist change in Iran. The two movements' members and supporters have been asked to help the families of the drivers. The expression of this support and calls on the population to protect the strikers have been made, at several occasions, on the waves of a broad based Iranian radio and satellite TV networks broadcasting for Iran.

People have stated that the E1 does not have an internal "ferrite rod"
antenna inside.

> Doesn't it have a whip antenna.

Yes.

> What more could you want?

An internal "ferrite rod" antenna inside.

> What the heck is a "ferrite rod antenna" anyway?

It's a closed loop type antenna utilizing a high permeance core (the
ferrite) in order to take up less space.

> And what does it do differently than the whip?

1. More convenient to use as you don't have to have the long whip
sticking out when you carry it around.

2. The whip is omnidirectional and the loop ferrite rod antenna has two
nulls in the pattern that you could use to null out a competing station
of local noise source, which could improve your reception.

3. The ferrite loop is less susceptible to pick up local noise sources
being sensitive to the magnetic field component whereas the whip is
sensitive to the electric field.

Using a PVC conduit is a good idea. Use a pull string and leave one
inside the conduit in case you want to add cables or other wires in the
future. Use a couple of elbows to point the openings down so water does
not get inside.

Use whichever is more convenient for you to use of the 50 ohm variety
and that would be the BNC or 259. The F type is a cheap connector and
the N is more expensive.

The silver plating maybe overkill but the soldered units are usually
better then crimped.

Outdoor connectors should have a sealant put on them.

So let's get this straight: we invaded Iraq becuase WMD could get into terrorist hands and destroy America, so we invade bu they are sent to Sryria beforehand. They are in Syria now or wherever and just as easily, if not more, could be sold to terrorists to be used against America. Is that it? Good job George! You've made a bad situation even worse. And just what is Goerge doing about these missing WMD? I don't see him talking about invading Syria. If the WMD are dangerous, shouldn't we be invading there?

Either they are in Syria and we aren't follwoing through (one mistake) or there were never any WMD (a different mistake).

That is because the S.Korean government won't allow US car manufacterurs to
set-up an assembly plant there.
If they could they would be able to compete on equal footing with local
manufacterurs.

Exchange rate has nothing to do with it. A 100% tariff is a 100% tariff.
If the item was manufactured to be sold for 10000 Yen, we would tax them
10000 Yen to import it. The effect is the same whether the exchange rate is
900 Yen/Dollar or 9 Yen/Dollar.

Don't think so. The US corporations would still charge the same amount to sell the car, no matter what it cost them to build it.

>> There's a good amount of US made products available here,

Again, the US isn't manufacturing any high tech consumer electronics anymore. What little high tech they do have under a US manufacturer's name, is generally built overseas by an overseas company (Magnavox owned by Phillips, RCA and GE owned by Thompson, Zenith owned by LG, etc.). Does anyone make computer hardware in the states anymore? I know most memory is made here, and most CPU's are made in the Philippines.

Here is an excellent show that is airing right now at this link. you will find a lot more factual information and a lot less garbage that comes from people whose minds are clouded by race hate and who are trying to think correctly and failing miserably.

Bev used to be on BET "Our Voices" Now she has a very entertaining and informative two hour show online.

I'm listening to it right now on an Atlanta station at this link, and you can/should too.

http://www.waok.com/

Now On-Air

The Bev Smith Show
Monday - Friday: 18:00 PM - 21:00 PM Central Standard Time

She's dedicated, popular, powerful and "Straight Up" blowing up talk formats as host of "The Bev Smith Show." Bev's American Urban Radio Networks' "Straight Up" commentaries have already generated a huge audience across the country. Now with three hours of her very own (10 p.m. to 1 a.m. Eastern Time), "The Bev Smith Show" is going indepth, tackling top politicians, examining health care issues affecting African-Americans, laughing, crying and sharing joy nightly, Monday through Friday.

Bev Smith is a media voice to be reconed with. On the air for two decades, she's appeared on NBC's "The Today Show," ABC's "Good Morning America," CNN's "Crier and Company," and "Larry King Live." Well recognized throughout the nation, Bev Smith has received more than 200 awards for her contributions to outstanding broadcasting achievement.

"The Bev Smith Show" has its own 800 number allowing listeners to talk "toll free" to Bev and her provocative guests on whatever exciting conversation she's got going on. "The Bev Smith Show" is the only national talk show targeted to a Black audience. Based in Washington, DC, home of many movers, shakers, controversies and celebrities, "The Bev Smith Show" will captivate you.

900 to 1?????????? Not a snowballs chance in hell in the 1980's!!!

At one time it was fixed at 360 to 1 and when floating rates were
adopted it GRADUALLY dropped from the early 1970's in an almost linear
decline in e.r. to current levels.

What???? Have you ever tried a Sony 2010, 55, 2002 or 7600?

A WJ is really an overpriced poor choice for most SWL's. With a radio
designed for SWL's they will hear he same stations and have a radio
designed for the kind of frequency jumping most of us do. And a Ten
Tec lives on a reputation more than performance.

With PVC pipe, it's a good idea to drill a drain hole at the lowest point, for drainage. Even if rain doesn't get in, there will still be water in the pipe from condensation.

Warm air gets into the stuff and the soil cools it down. Any water vapour in the air settles out.

A wad of Duxseal or similar duct putty on the ends of the pipe/conduit, sealing the coax, is also in order.

The lack of a ferrite antenna in the E1 is a deal-breaker for me. Monitoring Times reported that the dot matrix display generated too much noise and made the implementation of a ferrite antenna impractical. I'm hoping a future revision of the receiver might include a ferrite rod.

Hi guys since i cant find the other thread ill write my experiences here.I bought 4 meters of speaker wire and two screw in crocodile clips and it was a hell of alot cheaper than buying the sangean one $3.30 com paired to $20+.Anyhoo it seems to some night improve signal sometimes it doesn't but it has improved it definitely like for example i couldent get deutsche welle radio before without lots of background static but know i can get it crystal clear :).Only problem is with the radio ive got, like the radio Netherlands review said the sangean ats-505 has a narrow base so whenever you hook up the antenna,stand it up it falls over i learnt that the hard way, so i have to balance it with something heavy if i just want it stand up.Overall it has being good thanks guys for your help you saved me alot of $ and it probably does a better job.

Yours truly
Adam

Asking on topic questions is encouraged.

Feel free to ask more of them. No question is dumb.

Check out the handy dandy portable feature comparison chart at the
Universal web site. It compares 17 radios of 4 different brands. Your
SSB requirement cuts the 17 down to 11.

There should be some way of wiring up a ferrite core antenna in an exterior box. The thing could be rotated easily and kept a few feet away from the display. A bit of wiring to the external antenna connection and you've got everything.

The radio has an external antenna jack that you could use to connect a small amplified loop antenna. Located a few feet away from the E1 so it does not pick up the display noise you could point the loop by hand and I would like that better than having to turn the radio itself in a certain direction to null out a competing on-channel station or local noise source. It's more more money and trouble though.

I may have run on a bit but I was not top posting.

The following is what I was posting to:

> 53. Roy L. Fuchs
> Jan 26, 1:01 pm
> - shown quoted text -
> One must always tie one's Faraday Cage to earth...
>as often as one can... :-]

There was a reply link at the bottom of the post so I clicked it.

The quoted text was not shown so all I saw was your thing about Faraday Cages. To which I replied.

If you are going to take the roll of being a group administrator thats fine but I don't need to be told how I can post or the way I can post. Here is some constructive criticism for you: I find your manner to be blunt and tastless. You assume. That is your biggest mistake.

In the interest of not creating another run on post I am going to stop here.

X

Hi Lenny:
Here are pictures of the insides of a Tecsun PL-200 radio. It's hosted on radiointel.com, a fun & useful site. In some of the pictures you will see tightly coiled copper wire around a bar (that's the ferrite). It's at the top of the radio, and would be on the left side if you're looking at the front.

So true. :-)

The best choices in a receiver for you will be determined by your budget... so, how much can you spend? If you don't have kilobucks to spend on a receiver, worry not, for you still have many choices available to you, even in the $100 or less range. Nowadays, you can get a portable shortwave receiver that will perform very well indeed for under $100.

Obviously, you will get "more" radio for more money; but if you are like me and don't have the boundless budget for a top-of-the-line receiver right now, here are my personal suggestions, which are based on personal experience-- I've either owned or used these receivers enough to know how they perform.

- In the under $75.00 class (new price): Degen DE-1103, DE-1102 (or the KA-1103 and KA-1102, the same radios with different badging). These receivers are both a great bargain in the performance/price ratio. Both have SSB too. If you don't want SSB, the KA-1101 is an excellent little receiver for under $50.

- In the under $150 class: Sony ICF-SW 7600GR is probably the best in its class. The Grundig YB-400 (a/k/a the G400A) is pretty good, too.

But I would choose the Sony over the Grundig, all else being equal. I would go so far as to say that if you have $150 to spend, get the Sony ICF-SW 7600GR, with no hesitation.

- In the around $500 class: The Icom R75. Especially if you get the one with the Kiwa mods. I've used the transceiver version extensively (the IC-718) and the receiver portion of this rig is, as far as I know, the same as the R75. I pulled in many, many stations using a homemade dipole on that rig. It was an excellent receiver as well as a transmitter-- in fact, I used it more for receiving than for transmitting.

- Used radios: You can sometimes find some very worthy bargains here, if you know what to look for. If you can find a Sony ICF-2010 in great used condition, go for it. It's one of the best SW portables ever made. I've also had a Sangean ATS-803A which, if you can find a very good used example in the $75.00 range, is well worth the money, IMO.

Happy listening, and hope you find a good radio to suit your needs. Continue to ask questions here, because there is knowledgable help to be had for the asking.

Jackie

It is Usenet, dope. One should quote what one is replying to. It
isn't your email. It isn't FOR you. It IS for the world, and YOUR
post referenced to NOTHING. Learn and follow the protocol. The fact
that you didn't means EXACTLY that you need to be told how to post.

>Here is some constructive criticism for you: I find your manner to be
>blunt and tastless.

Good for you. I find your ability to make a valid assessment
hovering somewhere near nil.

> You assume.

You assume that you can invade any forum with your web based
browsing bullshit, and not follow decades old conventions when YOU
interlope your lame ass into them. YOU need to LEARN about the forums
you invade. THIS one is called Usenet.

> That is your biggest mistake.

Your biggest mistake is that you do NOT know how to make a proper
Usenet post. It really is that simple, and if you do not think so,
then it is YOU that is simple.

>In the interest of not creating another run on post I am going to stop
>here.

Like your petty announcements mean a damned thing.

Yep. They take the declared value of the item, and tax them exactly that for importation tariff. As I said, I can only verify that up to the early 90's, since I have not kept up since then.

Watkins Johnson receivers are ridiculous in price anyway. You could buy 5 Yaesu FRG 100Bs or IC-75 for that price. That or a whole treasure trove of amateur radio gear and get your license. Besides, in reality what is going to matter the most is your ability to put up a good antenna. If you can do that and there are good amateur radio books on erecting antennas for amateur and shortwave you will be better off.

For example, I used to have a 1500 foot longwire that would totally kick butt. For example, it was common to hear most of the Chinese provincial stations on SW as well as Laos, Vietnam, Australian outback stations, and most countries in Africa. Now I know most people can't put up that kind of antenna but if you can and your XYL or landlord doesn't mind it works great. In fact, a loop is probably the best receive antenna especially getting a loop about 250 to 300 feet in length.

Just my two cents

cuhulin,

You've been spewing your malicious crap for years, when are you going to quit? Everything that you say is offensive to someone and you seem to have this complete negative attitude on life. Why don't you just quit and sell, your computer, save your poor keyboard for it's $1 resale value and just go get a friggin budget labotomy. You'll never clue in and just don't even fit in to any forum. Maybe you could log in to rec.idiot.cuhulin and get your own audience.

You are a friggin complete moron and everything you type either doesn't make sense, or you just don't understand what you are typing. Even worse, maybe you don't care. I have seen you end more forums by saying something stupid than anyone else on the internet.

I don't get where you come from, insulting people, insulting companies who could sue the hell out of you, insulting everything. Your negative attitude, the posts you write, the entire nature of everything your brain "farts out" is always less than desirable. Where do you get off? Do you live in a box? Do you just envy anyone who does anything positive? Do you also know, that you and a couple of other people in this group have posted stuff so negative in this group, that you have driven off many quality members. What kind of a backwoods redneck are you?

You're a complete moron and 99% of the members in this group wish you would go breathe deeply into a plastic bag! People like you should have to pass a written and verbal test to buy a computer and get a sense of realism. Not to mention you use WebTV.. Why don't you go back to fixing golfcarts and stay the F#$k off the forums and go spray paint the walls where you live to get publicity. The internet has had enough of your crap.

Kindest Regards,

- A long time user and reader of all the posts -

The antenna primary ground connection should be close to the balun,
which should also be close to the ground (earth) at the bottom of the
vertical antenna leg. My balun box is about a foot above ground. This
keeps the ground wire as short as possible to the nearby rod for good RF
grounding. The balun should be installed in a water tight box,
especially if you have a lot snow cover in your area. I used a plastic
electrical conduit junction box with a cover plate and gasket. These are
the kind made for outside use. Most good hardware stores have them. The
box came with a hole on each end for plastic conduit. I sealed these two
holes with plastic caps made for this purpose. I drilled a small hole in
the top cap and installed a brass screw from the inside, which protrudes
from the cap. This is where the vertical antenna leg wire is connected
(soldered). The bottom cap on the box has a hole for the ground wire to
exit. The wire is sealed with RTV silicone around the hole. I also
installed a female coax surface (panel) connector in another hole next
to the bottom cap for the coax lead connection. The balun is mounted on

a terminal strip inside the box where the connections are made to the ground wire, the brass screw to the vertical antenna leg and the coax connector. The latter should have it's ground lug connected to the ground wire and the common side of the balun windings. The high impedance winding (with the most turns) of the balun goes to the brass screw on the top cap. The low impedance winding (least turns) connects to the center terminal of the female coax connector. You can also ground the shield of the coax near the house but I haven't found this to be necessary. As you said, it's better to avoid another break in the coax. Good luck.

Hi,

Thanks for help and suggestions, as well as all the help you've provided in
the past. Really appreciate it.

What sealant would you suggest ?
Just gunk up with RTV, or is there something neater and just as effective ?

Regards,
Bob

To add to what Ace said, you generally just pivot the radio physically on its axis to "null" any noise or interference. So, if the radio is sitting on a table, pivoting the radio left or right should reduce interference. Might seem silly, but it really does work. Ferrite rods almost never move inside the radio.

I do have an old '70s Pioneer stereo hi-fi receiver with an _external_ ferrite AM antenna that does move and pivot, however.

FWIW, I don't know if it's still available, but I have an AM loop antenna I bought from Radio Shack about five years ago that does a good job in enhancing AM (MW) signals with almost any radio. It works quite well with my Satellit 800.

Yeah well, if Eton hadn't pushed this receiver into the marketplace at such manic, breakneck speed, then maybe they'd have had time to include a ferrite antenna and make the display quieter. Better to take your time and do it right than launch a product prematurely--even if it means missing a deadline or two.

I hope you're being facetious.....this radio was being
announced as "soon to be released" for over 10 years beginning with
the moniker "Grundig SAT 900."

I have a Pioneer model number SX-690 stereo AM/FM radio I bought at the Goodwill thrift store a couple of months ago.On the back of the radio there is what looks like to me an antenna that pivots from a horizontal position to a verticle position.Is my radio the same model you have? Is the antenna for AM or FM reception or both?

No. Sort of like ANY object that is not at earth's potential.

> After all, there's very little surplus charge *inside*, right?

I'd say that in your skull, there was very little to start with.

> Or one could put (with care) an insulated charged ball inside .....
>and the magic surplus of charge on it would just vanish, right?

The cage is a conductor. If it contacted this charged sphere, it
would drain charge from it. If the sphere were an insulator, it would
drain charge from locations it made contact with. If the sphere were
a charged conductor, it would drain ALL of the charge from the object,
balancing it with the earth ground potential.

>> ANY electrostatic accumulation is typically referenced to ground,
>>and can be balanced to "zero" via grounding. Earth IS the reference.
>
> So if you instead connected to a power line ...
> The Earth is rarely at "zero volts".

There is a huge DC intertie up north. You should examine how it
operates. 2 million volts, 800 miles, earth return.

>>Any conductor whether it be a wire or even a sphere cannot hold an

> Cages are sometimes good against EMP pulses ...

Nope. An EMP pulse can pass through the entire planet. It can make
it through a cage. They are good at diverting (read attenuate) a good
portion of it, however, as well as local EMI and RFI.

Cages are sometimes good for trolls like you.

>> In this case, twisted pair bundles cancel some noise but not ALL

To stop any smaller radio from falling over,
you can purchase a book holder from an office supply store or
a collector dish holder (from a Hallmark card shop) . With a little
adjustment you'll have a
"tip resistant" radio for a lot less then it would cost to fix or
replace the radio. I've seen plate holders for about 2 bucks that are
made of coated very heavy wire that you can bend to adjust to a good
viewing angle. Hope this helps.

I have a beautiful old Grundig 5060 that has a ferrite antenna.
The concentric control behind the volume knob rotates it in a horizontal
plane.
I'll have to play with it today.

The electrical tape? No, underneath. Just leave a bit hanging out and at removal
time everything comes off nice and neat.

Works like a charm.

Gee, that's $10.70 per roll (list)(60" long) vs. the Coax-Seal at $2.99 per roll
(60" long).

How does it cost much less?

Whip antennas are notorious for getting bent up or breaking or getting mashed/kinked or coming loose.E1 radios (in my opinion) just look as though they should have built in ferrite core antennas for AM recption.I have many radios that have AM band plus some other bands too and every one of them that have AM band,they all have a built in ferrite core antenna.Sometimes,it might not be conveniet to pull up those E1 antennas to use the AM band,for instance sitting in a cubbyhole or a small space.It just seems to me that there is something missing from E1 radios.

>

I use a McKay Dymek DA5 shielded loop antenna for MW reception here, on the external antenna jack of my Fanfare FTA-100. It's a little more involved than a built-in but the results are worth it. I can null out competing/interfering stations and noise sources. And peak signals to maximize noise quieting. Especially on AM stereo sources, this can be a plus.

The antenna works well with my Grundig's too.

But by having the antenna remotely situated from the tuner, I can select a lowest noise location for the antenna, which, with the large number of sources I have in the building, is getting to become more of a challenge every day.

Lack of an internal ferrite antenna is, at best, a nuisance.

But I've been thinking about something a little more remote. Something with a pickup outside the building, which is impractical with the DA-5. Anyone have experience with the CCrane twin coil AM antenna (formerly Justice antenna?)

Judging by the installation manual, it may be the right solution not only for me here, but for E1 users who would prefer the noise benefits of a ferrite antenna.

Any comments from experience would be welcome.

So what!? There are hundreds if not thousands of individuals just like her
who have not abandoned public service because of some misguided ideological
religion.

No, the point of this article was to give the impression that every military
and diplomat in the US services is against the war.
This propaganda of the Left-wing-Liberal-"Progressive"-Socialist-Communist
faction fails miserably.

Sure it does. Japan was attempting to undercut American manufacturers and dump products in the American marketplace. (That is precisely the reason for tariffs. What do you think? Countries impose tariffs just to piss each other off?)
Japan could do this at the time by keeping the Y/$ exchange rate in their favor. If the 900/1 exchange rate was the same today you would be able to buy a Sony 7600GR for about $16 + 100% tax = $42 -- as cheap as a Degen. That's how the Japanese cornered the US electronics market over the decades (the Chinese are trying the same tactic today). BUT, the US put pressure on Japan to loosen the exchange rate. This "loosening" made the Yen strengthen in value relative to the US$. However, those countries which borrowed Yen would now have to pay back the loans with more expensive Yen. Communist China was also responsible for the 1997 Asian currency crises. A year or so prior to '97 China, whose currency rate has always been controlled by the government, decided to weaken the value of the Yuan. The result, over time, forced the "Asian Tiger" economies to also lower the value of their currencies in order to compete. This meant that now not only did they have to pay back loans denominated in Yen with more expensive Yen, they also had to pay back US$ loans with more expensive US$. This caused "Asian Tiger" banks to go bankrupt. And this was precisely the economic moment Communist China was waiting for and also the reason why they still maintain control of the value of the currency today.

the button marked "pre amp" should engage the several db receive boost amp. (i think its the white one) if it doesnt boost then the transistor is burned. (they pop at any provocation! like, for instance engaging the pre amp within visual distance of someone else using another linear amp) its an easy fix. its just one small transistor. trace it down and replace it. i was playing with one of those amps for a while. i burned up an expensive antenna, got the crap shocked out of me and suffered several rf burns before the local kids broke into my car and relieved me of it. it seemed useless for cb use. when you consider the trouble involved verses the small benefit you get, it just wasnt worth the trouble. a longer (more efficient) antenna and good use of a swr meter will give a more satisfactory boost in most cases

Yes that is good stuff to use. Any sealer that can stand up to outdoor
use and keep out moisture will work but they are all kind of messy to
use. Coax-seal is a little easier to cut off and clean up when when you
need to disconnect the coax in the future.

> >
> > I need a Usenet editor.

Using the photos provided in the thread by weatherall you can see that the coiled ferrite rod goes across the top of the case. The nulls are symmetrical about the rod and exist at the ends of the rod. The "Null" is where the rod antenna will be the least sensitive to a broadcast station. The null off both rod ends is a very small just a few degrees around the rod antenna ends and the maximum reception would be when the rod antenna is broadside to the station. Due to the length and width of the rod antenna this almost always means that the radio front or back should be facing the station.

<http://www.radiointel.com/review-tecsunpl200.htm>

How to use this to your benefit? Lets say that either another station or a local noise source is interfering with your reception. You would point the side of the radio toward the interference reducing the level of interference. This will only work if the interference is on a different heading then the station you are trying to hear.

The best use of the null will involve acknowledging that we live in an (at least) 3D world so whereas the null will be found is by rotating the radio on a compass heading it can be made "deeper" by aditionally tilting the radio in the vertical axis.

Here is an analogy as to what you are trying to accomplish by nulling an interference source. Radio waves are a different frequency of electromagnetic waves same as light waves. It you had a white rod on a black background some distance from you holding a flash light next to your head then the rod would hardest to see when the end of it was pointed at you representing a small dot. If your eyes were the interference then the rod would have the least exposure to you when the end was pointed right at you rotating the rod in the X (compass) and vertical altitude directions so you can only see the very end of it.

What does that have to do with being 'into' radio?

Please, put your thinking cap on before you reply.

Seems to me the narrower width of the Coax-Seal makes it a bit easier to work with, though I suppose one could cut the 3M stuff.

I bought 2 rolls of the Coax-Seal about 10 years ago and still have one full roll and a partial here. The thickness is certainly adequate.

3481. (OT) St. George?

Newsgroup: rec.radio.shortwave
Date: 2006-01-28 21:36:05 UTC
From: Oklahoma Joe <ok-no-spam@okie.net>
Message-ID: <43DBE3C2.231003A0@okie.net>
Source record: 60130

President George W. Bush was scheduled to visit the Methodist Church outside
Washington as part of his campaign. Karl Rove made a visit to the Bishop and
said to him, "We've been getting a lot of bad publicity among Methodists
because of Bush's position on stem cell research and the like. We'd gladly
make a contribution to the church of $100,000 if during your sermon you'd
say the President is a saint."

The Bishop thinks it over for a few moments and says, "The Church is in
desperate need of funds and I will agree to do it."

Bush pompously shows up looking especially smug and as the sermon progresses
the Bishop begins his homily:

"George Bush is petty, a self-absorbed hypocrite and a nitwit. He is a liar,
a cheat, and a low-intelligence weasel. He has lied about his military
record and had the gall to put himself in a jet plane landing on a carrier
posing before a banner stating 'Mission Accomplished.' He invaded a country
for oil and money, and is using it to lie to the American people. He is the
worst example of a Methodist I've ever personally known.

But, compared to Dick Cheney and the rest of his cabinet, George Bush is a
saint."

Pretty much mechanical protection only. If there's no drain then the pipe serves to make sure the wiring sits in a pool of water forever. At least with direct burial, you only get random wettings. A layer of sand around the cable would serve to protect from damage.

Other than mechanical protection, the other use of pipe is to allow future installation of wiring between buildings, etc

The city authority here now requires a two inch PVC pipe for all new underground residential electrical services. It has to go from the meter out to the property line. The concentric neutral (or URD cable, if you prefer) is installed in the pipe.

The reasoning is that if the cable ever has to be changed because of damage, the large pipe will allow easy re-pulling.

It seems to me that if the wire is damaged to the point of needing replacement, you have far more serious problems than just the wire. A collapsed conduit would make change impossible.

Liberal mainstream media is dedicated to abortion, atheism, and sodomy.
This results in a large audience of conservatives who want an alternative.
Conservative talk radio fills that need while the liberals are content
with the mass media fare and don't need an alternative such as Air America.

From private communication with a friend in the radio business;

In the Dallas-Fort Worth market, right wing talk is carried on
WBAP-820 (50,000 watts), KRLD-1080 (50,000 watts), KSKY-660 (20,000
watts), and KLIF-570 (5000 watts and simulcast on 1700 with 10,000
watts) In addition, there are Christian talk stations with the same
"talking points" on the FM dial at 90.9, 91.7 and 100.7, all with
100,000 watts each.

Along comes Air America on KXEB-910, 1000 watts, transmitter about 30
miles north of Dallas...

and here, and in the newspaper letters to the editor, and the local
programs on talk radio, and the discussion newsgroups, and the local
sections of radio-info.com:

Air America should be shut down for treason in time of war
Al Franken wants Bush assassinated
Al Franken stole money from the Boys Club
Al Franken is a filthy jew
Air America is not wanted or needed
Air America has no listeners
Air America has no advertisers
Air America bounces checks
Air America has worse ratings than the brokered Pakistani love ballad format
it replaced in some city...

In the Dallas market, the Air America station has less than 1% of the
transmitter power of the other AM stations mentioned above. Yet in a
city which voted for Kerry in 2004, the right wing doesn't seem happy

unless they control 100% of the discussion. And they will resort to lies to destroy any deviance from the "party line."

AAR is doing fine, adding a couple stations a month, and now on Armed Forces Radio Network for an hour a day and a dedicated XM channel.

In NYC, at the rate AAR listenship (WLIB) is growing and and Rush's (WABC) is shrinking, the curve will cross in 5 quarters.

Enemy? Was the US at war with the Chinese during the Bush the Elder's time in office? How did David provide the Chinese the capability to manufacture 500 lb bomb casings? Would it require substantial renovations or upgrades to gear the factory for bomb production? Did the company give the Chinese the information to switch from pipeline to bomb-making?

3495. Radio Verdad on 4052.5 kHz?

Newsgroup: rec.radio.shortwave
Date: 2006-01-29 00:12:44 UTC
From: Darkington 'Starsky' Starr <dark_star_radio73@yahooEY.com>
Message-ID: <0t1ot1l2po4agmmqtadn5hg6kr6dqnebqg@4ax.com>
Source record: 60145

I'm hearing a station broadcasting music, with vocal announcements in Spanish on 4052.5 kHz @ 0000Z. Radio Verdad -- Truth Radio, or Radio Truth. Anyone know anything about this station? I can't seem to find anything in printed media/Internet sources.

Thanks in advance,

Starsky

Listening, not QRM'ing, just a radio hound.... :)

> You can download and use Orbitron software "Satellite Tracking
> System" free of charge http://www.stoff.pl/

Have you ever used STS PLUS for satellite tracking and if so, how does it compare to Orbitron? I used to use STS for MIR (2-way packet qso QSLed), the "new" Sputnik of a few years ago (1-way QSLed) and tracking, recording and decoding the telemetry on the DOVE satellite for one of my kids' school science fairs. I liked STS a lot, but it hasn't been updated since 2002 and it was a DOS program that almost, but never quite, made peace with Windows.

With Orbitron, how easy do you find it is to update the keps (TLEs)? I tried Orbitron when it first came out, but if I recall, there was a problem or complication at the time for loading the TLEs.

BTW, if anyone wants to copy SuitSat, better do it soon after they toss it out the window. Batteries will only be good for a week or so...

I just received a D2999 today which I hope to add to my collection if I can take it apart and give it a good cleaning (this is what I do to almost every radio that goes into my collection)
has anyone out there taken one apart ? I believe there are some tricks to the disassembly process that I need to know since I have not tracked down the service manual yet.

please email me direct at mmaghakian@yahoo.com

3526. AM Number stations on big-power SW broadcaster slots

Newsgroup: rec.radio.shortwave
Date: 2006-01-29 07:15:20 UTC
From: shoppa@trailing-edge.com
Message-ID: <1138518920.847132.222470@g47g2000cwa.googlegroups.com>
Source record: 60225

Heard a spanish-language (female synth voice) AM number station at 5745kHz tonight, 0700 UTC, competing with Radio Taiwan. My understanding is that Radio Taiwan is coming out of Okochobee FL. Frequency seems to be nearly exact, little to no beating.

Is this likely a jamming-through-numbers-station attempt? (OK, ignore the philosophical issue of who is jamming who or who is carrying the most useful information!). Neither by any stretch of the imagination are weak broadcasts here in the Mid-atlantic US. I don't follow numbers stations much anymore but most of the ones I hear are SSB now.

Oh, just heard the "finale" on the number station and they signed off at 0713 UTC.

well, I got impatient and ripped it apart, figured out everything except the front panel which I think might be better left alone.
using all the methods I have developed over the past couple years I was able to clean off a lot of dirt and touch up a couple of tiny dings and now have a collectable D2999 for my collection
I have added a few radios to my collection this month so I need to update my web page.

I ordered the service manual from these guys back in December:
http://www.manuals-in-pdf.com/
They were pretty good in supplying the Sony 6500W manual and the Satellit 210 manual, but they seem to have gotten lost on this one. I contact them about every week and a half and they keep telling me that they will have it in another week.
If it wasn't only 16 bucks I would contact my credit card company and have the charges reversed (could they do anything to somebody in Poland? I doubt it.)
Because of this last incident, I wouldn't recommend them. Supposedly, they have the service manual for the Grundig 650 but I decided to order it from W7FG Vintage Manuals. At least I received it 4 days later.
Another thing about that website.....the quality of the manuals varies. Sometimes, they are a scan of a very poor photocopy of the original. Well, at least they try.
Another thing.....if that 2999 of yours is in good condition it is a very good LW/MW receiver. The main failure mode with the 2999 is that top row of bandswitches. Mine wasn't that clean, so I ended up trading it towards a Drake R7.
Good luck.....I hope you find the manual.

Pete

Usually not for the buyer; the seller has to pay a commission if a credit card is used via PP.

Plus, you didn't mention what kind of PP payment you are making (there are two ways). You, as the buyer, can pay via PP "funds transfer" from your bank account...if *you* are set up for that. Otherwise, you can use a credit card as you would with a conventional "brick and mortar" merchant, with nothing additional required on your part.

With the PP "funds transfer", you as the buyer, have protection from PP. If you use a credit card via PP, you have protection from PP AND the credit card company (if item purchased is defective, not received or whatever).

Enjoy that 2010!

73,
Carter

I like my 505 just fine. One thing I've discovered, though, is that, at least with my particular radio, if you plug in the AC adapter while the radio is _on_, it will erase the frequencies you've stored in memory and reset the clock. I've accidentally done it several times.

For example, I unplugged the "wall wart" while the radio was turned off to use the outlet to run a battery charger. Later I turned the radio on, and nothing happened. I realized that I hadn't plugged the wall wart back into the outlet, so went ahead and did so. The radio reset itself.

And yes, both the 505 and my ATS-909 can be tipped over very easily. I knocked the 909 over several years ago and it hit a hard floor. The radio stopped working with battery power, but continues to operate with the AC adapter, or by running it with battery power through the power input connector.

There might be a downside with security. I have noticed a great
increase in "phishing" targeted at getting my PayPal information. The
fake emails are pretty good but curiously give themselves away by
grammatical and spelling errors. I was concerned that some sharpie
would get access to my bank account and I closed the account. Now I use
postal money orders to pay for purchases and feel more secure. If the
merchant won't accept money orders I just move on. There is always
another deal. If I wanted to use PayPal, I would set up a limited
account for that purpose only.

If you have never used paypal, you can pay via a credit card [through paypal] up to a cumulative lifetime [yes, lifetime] limit of $2000 [as I recall the number].

So long as you are under your lifetimt limit and paying through your personal credit card, you are afforded all the protections offered by your card provider [including but not limited to charge-backs].

To pay via paypal beyond that lifetime limit, you must pay via a bank routing number connecting paypal directly to your bank account. To determine your protection against someone emptying your bank account directly and instantly via that routing number, give your bank a call. Let us know what they tell you.

I prefer sellers who accept USPS MO's. I'd much rather risk a known amount rather than offering anyone the drain plug on a bank account. Besides, USPS MO fraud isn't looked on too kindly by most authorities.

And yes, there is always that huge database of bank routing numbers sitting somewhere...

But only up to the paypal lifetime limit of credit card use, before you
have to offer up your bank routing number.

They resolved security issues that plagued their early years and are quite reliable and they are pretty much the 900 pound gorilla in consumer payments brokering. If you are concerned about providing confidential information to outside sources then you should consider that Paypal, although it acts in many ways like a bank it is not a bank and is virtually unregulated. You will provide them a credit card number and checking account number so they could easily tie that information to a lot of other easily obtainable personal information about you.

Personally, I'm not that concerned, but I know some people are.

BTW, the information broker CHOICEPOINT that compromised information for hundreds of thousands of consumers recently settled the issue with a $15million fine by the FTC.

Haven't seen anything referring to a 100% tarriff on all Japanese
electronics in the 1980's or 1990's. I do remember when Toshiba
incurred the wrath of the trade people, but that was a special case.
Do you have a link or other information?

You could minimize your chances of posting incorrect information if you
took the time to research technical topics like exchange rates first.
You may wish to consult the extensive public data maintained by the
U.S. central bank (The Federal Reserve).

I wouldn't want to give them my checking account number or any bank
information. A credit card number, maybe, but that's it.

Dear Bob,

I have a CitiBank credit card and Citibank offers the option of downloading a program and using what they call a VAN (Virtual Account Number). When you want to buy something from a dealer or to pay someone using PayPal, you use the program to generate a VAN - this number, tied to your actual credit card number (it's totally different than your "real" number), can be used for only ONE transaction at ONE particular place and at ONE particular time (you can set it up to be used many times at one particular dealer if you wish, however). So if you were to want to pay someone via PayPal, you generate a VAN, use its default which sets it up as a one-time transaction only, and give that number to PayPal. It is useless to anyone else at any other time. This affords ABSOLUTE security for you.

It is a very useful option. There may be other credit cards which also offer a similar service (I bleieve Discover is one); you'd have to check with your own particular company.

I hope that is of some help to you.

I wish you the very best of luck with your '2010.

Joe

I had a hacker open up an account (not paypal, but similar) on my credit card, so not having paypal doesn't mean you are safe from hacking. Someone can open up a paypal account on your card. In fact, having paypal on your credit card would prevent such hacking since you already have such an account.

It's better to have one card just for on-line purchases and paypal, and keep the limit low, though that isn't easy since if you keep paying your card on time, the company keeps raising the limit.

Some people who dont use webtv dont realize there are many people who use both webtv and computers,I use both.There are webtv computer help news groups for people who use webtv and computers.Some elderly people use webtv only because they only want to do some surfing and keep up with friends and relatives and perhaps use a digital camera to send photos and do emailing,they dont want to have to put up with computer viruses and the hassels of maintaining computers.There are advantages with computers and webtv.Some webtv units date back to when webtv first became available and those old webtv units/set top boxes are still working just as good as new.(there is a little fuse inside webtv units that looks like those round glass auto fuses),usually replacing that little fuse gets them back in working order again) Some people gripe about some people who pay a lot of money for radios at ebay,I never gripe about that,it is their money and they are free to spend their money in any way they wish.People are free to make their own choices.

SX-28 and its variants had 15 tubes I believe but I don't know the Hallicrafters line well enough to know if there was a 13 tube set or not. Do a web search on SX-28s and it will bring up some hits that have pictures so you can see if the 28 was your uncle's set.

> and the 12inch speaker in the separater metal cabinet with a big H
> across the grill.

Yup, the PM-23 speaker---some had the "h", some did not; presumably the one "with" is more valuable.

> Had crystal phasing, bfo, great bandspread tuning, an 'S' meter...

Definitely a nice set, the top dog in its day. However, only a single conversion radio--images get to be a bit of a problem above 14 Mc/s.

> I've aften wanted to compare it side by side with a modern digital

> don't know.

Well, my credo is "I've used old and I've used new, and believe me, new is better". <grin> Technology *has* improved in the last 50 or 60 years. However, for styling, romance, nostalgia and just plain fun, you can't beat some of the old timers.

> It was really versatile at receiving and selecting a station from a
> crowded location on a band. It sure was heavy.

75 pounds (!) *plus* maybe another 20 or so for the speaker.

> Wish I still had it, great looking piece of hardware from time gone
> by. I'd rebuild now that I appreciate it, and have the know how.

Good luck...the 28 can be a pretty tough rebuild to do it right. Again, look on the web for the trials and tribulations of a guy that documented his 28 rebuild.

Nope...main HF rig is a Ten Tec Omni VI+. But they all hook up pretty
much the same, depending if you use "true" FSK vs. AFSK for rtty. For
SSTV, they are all the same.

Hi Mike,

Congrats, this is a great radio. I found one in near-mint condition
several years ago and did an AGC mod on it to reduce AGC pumping (IIRC,
I increased the capacitance in the AGC network to slow down the AGC).
I have a service manual for it somewhere if you need additional info.
I also have its baby brother, the D2935, another great-sounding
receiver.

Yeah, I've got a smaller limit card I could use. Something to think
about.

I recently changed my mailing address with PayPal. The next day I
started getting fake PayPal emails saying that I had to do a few more
things to confirm my address change, which of course included submitting
my password. How did the phisher know that I had changed my PayPal address?

No body knows your info on paypal unless you give it to them.

I wouldn't either if you don't fully understand computers and online banking and commerce but you all better learn it quickly because that's the future of business and banking. Right nowone of the most dangerouse forms of info you can handout is a writen check. It has all kinds of good info a con can use to rip you off.

If you are in a store and writing a check for whatever,be carefull and dont let anybody look over your shoulder and be carefull too if anybody nearby is using a cell phone,that cell phone might have a built in camera and they could take a picture of the check you are writing and when they get home to their computer,they can download that picture to their computer and zoom in.

3584. Eton E-1 recall notification

Newsgroup: rec.radio.shortwave
Date: 2006-01-29 23:13:52 UTC
From: Wuff Hung <kennjd@adelphia.net>
Message-ID: <ql-dneMrrNS-0UDeRVn-qQ@adelphia.com>
Source record: 60185

The Eton Corporaton of Palo Alto, California issued a recall on January 11, 2006 on certain E1 units for quality control issues. Their statement from Sales Director Ryan Giordano, states that affected units are found in the range of 3067 to 5462. The serial number on this model can be found on the back of the radio under the tilt stand. The simultaneous use of batteries and the AC adapter may cause battery heat-up, leakage and possible rupture.

Eton is in the process of issueing a recall notification. Affected customers may contact Eton Customer service at 800 872-2228 or 650 903-3866. Eton will make arrangements with customers for prepaid return shipping to Eton. Eton Corporation will send the customer a fully tested E1 replacement plus a complimentary FR200 emergency radio.

In theory the limit doesn't matter since the credit card company covers
the loss. However, I suspect these theives prefer to steal higher value
credit card numbers.

I will say that billpay (the competition to paypal at the time)
reimbursed by losses without me even contacting the credit card
company.

Note there is a time limit to report the theft. Generally you get
ripped off so badly that the credit card company calls you. I suggest
your credit card company has both your home and cell phone numbers as
you will want them to get a hold of you ASAP once they detect the
theft.

All that is fine -- up to the lifetime limit of using a credit card.
After that you CANNOT do a paypal transaction without giving them a bank
routing number [which is not a per-use generated number].

After a year of e-baying and Pay Paling
NOT YET (;-)

Really very convenient

Example I sell Ham books on the internet.
I open my e- mail and it sez "You got Cash" from Paypal
Now I and the buyer don't have to wait for snail mail and time for a
personal check to clear
Either the same day or the next available Post Office day -- I ship the book
If it is specified Priority mail -- gets there very quickly 2 - 3 days

Works for me SO FAR

I don't like the idea of when I use PayPal to pay someone -- paypal has
access directly to my bank checking account.

So I set up a small separate checking account and transfer the amount (and
no more) to the separate one

But some folks won't get on e-bay - let alone PayPal

The promise made when the original no-code proposal was new was that there would be a MUCH more difficult technical exam. When they actually pushed no-code through, they added five measly questions from the same lame question pool already used for Technician licenses.

Oh I forgot
Both e-bay and PayPal have scammers afoot termed "phishers" as others noted

BE SURE TO READ THE SECURITY ARTICLES AT E-BAY AND PAYPAL

There is a way to tell if a message is legit or bogus. Best you read same as
tis too long to repeat here

So be very careful when you get messages from them.

Before the next brand-new never-heard-before name pops up as the head of the White House "plumbers" unit, just exactly how many people were THE head of the unit?

What I find interesting is getting e-mails from [alleged] e-Bay
regarding my account.....I've never bought, sold or
registered with them. Of course they are summarily deleted without
being opened.

I'd be very interested in seeing that, Which movies had the big 'H' in
them? I'd be happy with even one name...

Heck..even the famous Gilligan's Island radio didn't have an 'H' on it.

> You got that right!

If the shortwave listening community really feels that way, it is critical that, organizationally and individually, you assess BPL interference where it is occurring worldwide, and then report it as interference.

So far, Amateur Radio has been the squeaky wheel, and all industry efforts by individual companies have been to protect amateur radio. Those of you with S meters will understand that in the 15 or so BPL sites I have been to do do testing, I saw S9+ (extremely strong) interference levels across tens of MHz spectrum as much as a half mile down power lines. This would effectively put and end to shortwave listening on the spectrum that BPL uses.

ARRL's information on BPL has some videos that are well worth watching. See http://www.arrl.org/bpl.

BPL is in a number of cities in the US now, operating at these strong levels on the shortwave bands. Yet formal reports have not been filed.

See http://p1k.arrl.org/~ehare/bpl/ex2.html for a list of the places where BPL is deployed.

ARRL has the standing to speak for Amateur Radio, but its information has been put together in a way that other services can use it to assess whether BPL will have an impact. It cannot speak for other radio services, for a number of good and necessary reasons.

Ed Hare, W1RFI@arrl.org

I have had the 909 since it came out and and I like it a lot back then I was traveling alot and I wanted reliable information rather than the local tv and music radio. I had been a ham back then too but did not have a transmiter with me so I used the SSB portion of the radio to listem to the hams chating ;-) ! I ran it off of batteries and had a long wire I droped out of the hotel room window! Not the best setup but it worked!

Thank you for your post. I want to participate individually in filing interference reports when it becomes an issue. I wish that shortwave listeners in the affected areas would write about their experiences here as well.

Carter.. My uncle was in the signal corps during WWII. I acquired his Hallicrafters which had 13 tubes, I believe, and did have two 6V6s in the push/pull audio output.... and the 12inch speaker in the separater metal cabinet with a big H across the grill. Had crystal phasing, bfo, great bandspread tuning, an 'S' meter... all kinds of stuff to increase selectivity. It received weak signals and more importantly, could select them from strong adjacent stations. I've aften wanted to compare it side by side with a modern digital set. Maybe my memory of it is better than it actually was, but I don't know. It was really versatile at receiving and selecting a station from a crowded location on a band. It sure was heavy. Wish I still had it, great looking piece of hardware from time gone by. I'd rebuild now that I appreciate it, and have the know how.

Carter... Thank you for your reply. I acquired the set in 1961, my father paid my uncle thirty dollars for it because of my interest. The set might have had 15 tubes, I remember counting but don't remember the number.

I'm sure the new stuff is much better, just my sentiment talking.... has to be. It sure was exciting though for a twelve year old kid to turn on that radio and spend hours listening to stations far and near. That kind of excitment will color one's memory.

If I had the old set, I would rebuild it. Mine was in perfect shape, had never been worked on, but begin to lose sensitivity a few years after I had it. I was the kind of kid that had the RCA tube manuel memorized, so when real schooling in electronics began, I was ready. By that time though, the Hallicrafters had left the ranch. Wish I had it now though. Thanks for the tip and encouragement to look it up on the Internet. I'm on my way to Google this minute.

Go get a large cup of coffee, search this forum for that guys name and settle back for many hours of reading pleasure. You will find that this forum is split into three groups:

Group 1 feels he is a crook that buys as much as he sells on Ebay and misdescribes his radios.

Group 2 feels he is a high volume seller that buys as much as he sells on Ebay and probably describes his radios as accurately as most other sellers of radios.

Group 3 doesn't really know or care about his credentials as a seller.

Groups 1 and 2 are both relatively small, while group 3 is the majority of people on this forum.

In most AM/FM radios, the ferrite bar antenna is for AM reception
only. A separate whip antenna for FM is reasonably close to a quarter
wavelength on the FM frequencies; a 1/4 wave whip antenna on the AM
band, 530 to 1700 Khz, would be hundreds of feet long, hence the
shortened AM antenna using the ferrite rod. On little radios, the rod
is a couple of inches long, on others such as the C.Crane CCRadio or
the GE SuperRadio the rod is bigger, about 8 inches long, hence their
supposed "DXing" capabilities for AM.

On shortwave radios, I'm not sure which frequencies the ferrite bar
would be used for, certainly the American AM broadcast band, not sure
about others.

One disadvantage to the whip antenna, it is vertical, and vertical
polarization picks up more manmade interference. Horizontal antennas
such as the ferrite bar are a little more immune.

There is a dealer named radio-mart on Ebay that is located in Kentucky,
but there is no ebay dealer called radio-mart in New York. There is a
radiomart in upstate New York, which is probably the one he is
referring to.

Handel (pronounced like handel) is both a jerk and a lawyer. One
suspects he won't say anything that puts himself in legal hot water.

More shameful was the pro-death penalty broadcast John and Ken did at
the Tookie Williams execution.

Note: If KFI wasn't ashamed of their actions, they wouldn't whisper K F
I all the time, but say it loud and say it proud.

Sounds like there is a ghost in the machine or its just an intermitting
problem with the tuner.

Hi,

I was wondering if folk could point out any good resources about antennas for beginners. The amount of information out there is a little daunting.

I listen to SW and SSB mostly on a couple of portables and just got a table top (souped-up DX-394) that I am enjoying playing with. I am a homeowner and my "shack" is in a second-floor room, with an insulated thin wire running out the window of an attic room connected to the room I listen in, but not suspended, just hanging out the window. I have about 1/3 acre of back yard with some small trees and bushes. Trying to figure out what is possible with this location. I get some buzzing interference, possibly from my heating system (?) when the heat starts, and there is a tiny airport a mile or so away, too.

Thanks!

seigezunt

Coming in well here on 15720 at 2215.

Not quite as good after 2236 on 17675. Not sure how long they'll hold up here on that freq.

I think this has not changed since Oct 30 2005 but they already made
some changes in their schedule this season. The 17655 is not great but I
have been able to get them some days quite well.

I'll have to try the earlier time and frequency changes in the schedule.

Changed time or frequency *

UTC kHz
0400-0759 15720
0800-1059 9885
1100-1259 13840 *
1300-1750 * 9870
1751-1850 * 11980
1851-2235 * 15720
2236-0359 17675

Lets try a reliable source instead. As I mentioned you could take a
look at the monthly monetary statistics on the Federal Reserve website.
You will find that the exchange rate was in the range of 250 in 1985
and finished 1989 at 143 and that the trend during that 5 year period
was generally down. For over 20 years it was fixed at 360:1 under
Bretton Woods, but in the early 1970's fixed rates were abandoned.

Go read the data if you don't believe me.

The past few days, there have been some nice Sony 2010s on eBay in the
$255 to $330 range; that's a bit cheaper than the Eton dealies.

There's also Joe Carr's Receiving Antenna Handbook
available. It's a good reference for the newbie, since
(unlike the Practical Antenna Handbook) it doesn't
overwhelm you with radio theory.

dxAce:
Yeah I have to catch them early in the evening here near Boston (tough time
of day for me to listen). The MUF drops down below 10 MHz fast after that.

My 2 cents:
in the mentioned page you have : http://www.greertech.com/hfloop/mymagloop.html

I've tried this one (very easy and cheap to build). It works ok !!! Only downside, if you are listening to several bands, the you must have several antennas (one per band).

Else, I will try this one as soon as I have some time to install it (found in the eGroup : http://ph.groups.yahoo.com/group/Shortwave-SWL-Antenna, you can go there as well for info) :
http://ph.groups.yahoo.com/group/Shortwave-SWL-Antenna/photos/view/531f?b=3

I have used Paypal a number of times, and have not had any problems at all. I do get several phishing e-mails each week pretending to be from Paypal. I forward them on to spoof @ paypal.com with the full headers. I don't know if it really does any good. Paypal never sends out anything asking you to put in your password.

I also get phishing e-mails from banks where I don't have accounts. I forward them on to the customer service e-mails for those banks.

Cooling isn't change?

The increase in global mean temperature is causing some places to get
warmer, some to get cooler, some to get drier.

This is no time for simplistic rationalizations.

But a SW whip antenna is usually much less than 1/4 wave, as well. The
whips can be resonated with additional components, but they usually aren't.
It isn't necessary.

Radios with a longwave band would also use the ferrite rod antenna for that
band. I've seen radios, such as the Realistic DX-100 which use a ferrite
antenna for each of the SW bands. In the case of the DX-100, the antenna is
used mostly as the inductance of the input tuned circuit. Nearly all the
signal power on SW comes in through a whip or external antenna. Moving the
radio has practically no effect on the signal or interference.

On most radios, the whip doesn't have to be vertical. Sometimes interference can be minimized by moving the whip, although it often doesn't make much difference.

The horizontal ferrite bar radio antenna is magnetically horizontal, but electrically vertical, just like the whip antenna. However, the ferrite antenna is much less prone to capacitive noise pickup from whatever electronic stuff is running.

Most likely RTTY or some other digital mode. If your radio receives SSB, you ought to try and decode it with some of these software RTTY readers out there.

Could be WEFAX, FAX, RTTY, SSTV, PACTOR, NAVTEX, some packet-based FSK
mode etc. You don't give us much to narrow it down.

Sometimes they intersperse CW ID's in among the deedle-deedles.

Tim.

Single Side Band mode is a modulated signal without the AM carrier. You usually don't want a carrier in the way when trying to use most data modes:

3721. Coax Choke For Receiving Antenna ?

Newsgroup: rec.radio.shortwave
Date: 2006-01-31 20:22:33 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <CrOdncj7k5iaWkLeRVn-pw@comcast.com>
Source record: 60321

Hello:

Will be putting up a receive-only antenna (<30 MHz) in my backyard.

The antenna will terminate in a Balun, and then a lightning arrestor,
immediately before the coax (8X probably)
run back to the house some 30 feet away.

Have read in one or two places a brief comment that it is a good idea to
make a few turns of the coax
right before the start of the antenna. Termed a "Choke".

If so, what is the purpose ?
Needed even if there will also be an arrestor ?

If a good idea, how many coax turns, of what diameter ?

Also a good idea at the other end, by the receiver ?

Thanks,
Bob

I don't think a coax choke is suitable at HF frequencies. I've seen
them used as low as FM broadcast pirate stations. The length of coax is
proportional to the frequency in use.

A choke passes DC unimpeded and blocks higher frequecy AC. Unless
your SWL antenna is mounted on an FM transmitter tower I don't see any
advantage. Lightning wouldn't notice it.

Most Baluns are actually autotransformers and all parts are at DC
ground (provided your coax outer conductor is grounded and the
termination is properly affixed). This is the best solution to
protecting you from anything other than a direct hit. A lightning
arrestor will keep your house from burning down but won't save your
radio's front-end.

If transmitting, a choke can keep stray RF off the outside of the coax
shield. There's not much point to one on a receiving antenna.

He tells you not to ground the end of the coax. It's not a loop antenna
if you don't.

>A choke passes DC unimpeded and blocks higher frequecy AC. Unless your SWL antenna is mounted on an FM transmitter tower I don't see any advantage. <

I will disagree here. Although a single coax choke of specific design won't solve all problems across all bands, a choke of the right size will give you an obvious reduction in common mode noise at certain minmum requencies and upward.

I installed one on my own antenna at home. I was hearing common mode noise across all bands from zero to 30 mHz. i fashioned a coil choke about 7" diameter on a piece of ABS pipe, wrapped neatly enough times to get about 30 feet of the coax onto the coil, and mounted it just below the antenna. This has made a noticeable difference for all bands from 11 mHz and up...the background is considerably quieter than before. A note here - this thing can get pretty hefty, fast, if you use substantial coax of the 3/8' variety or larger. Messing with this thing as an integral part of a relatively stiff run of coax can cause minor cussing and swearing if you do not have some assistance (and maybe even if you do ;-)

For lower frequencies, a larger coil able to hold a greater length of coax would have been necessary; I didn't feel that the difficulty in fashioning one of these and trying to get it up on top of the mount I have would have been worth the trouble. I have since reconsidered this decision many times and one of these days the neighbors just might see big ugly coils of coax up under my two antennas. Whether my wife goes along with this, I can't tell you.

You are looking at the Ham stuff, which is geared for transmitting. The transmitting situation needs to take a few more things in account that are not as important in receiving. The main idea here is to prevent common mode RF current on the outer shield coupling to/from the antenna as you may end up with a hot radio and shack. If you are burrowing the coax on the way to the BALUN there is no need for this and the BALUN already performs this function.

> Needed even if there will also be an arrestor ?

Not needed in your situation.

> If a good idea, how many coax turns, of what diameter ?

As an example if you were to do this for a dipole up a mast 3 to 10 turns about a foot diameter depending on the frequency.

> Also a good idea at the other end, by the receiver ?

If the coax has a run through the walls of your place and 30 feet through the air instead of 30 feet through the ground then yes both ends and also spaced at intervals along the run.

This is easier done with a ferrite clamp on choke as opposed to coiling the coax.

It is my probably foolish hope that someone, somewhere, will follow up on these things and bust some huge, boiler-room phishing operation. Unfortunately, most of these e-mails seem to originate in China, Brazil or Russia when I bother to trace back the IPs.

to use encryption. If this is not true I'm sure someone will correct my
speculation.

Miss me? :)

I was with a little mom and pop ISP and a dialup account. But that ISP went out of business, so I switched to SBC (now AT&T). SBC had shitty service, among which was the fact that I couldn't access newsgroups. I tried their SF server but couldn't log on. And I was reluctant to call their tech support, since it's in India somewhere and none of their techs speak good English. So after a few months I got wired for cable internet and went with Comcast broadband. I only now got around to figuring out how to log on to the news server. So I'm back. I haven't been listening to the radio lately since I've been busy attending vocational school learning to be a computer technician, but I'm starting to miss having real news.
